CANADA YEAR BOOK  
1943-44

THE CANADIAN STATISTICAL YEARBOOK  
ANNUAL REPORT OF THE STATISTICAL  
BUREAU OF THE DOMINION

Published by the  
Government of Canada  
Ottawa, 1944

Printed in the  
Government of Canada  
Ottawa, 1944

## PREFACE

From the earliest years of the Dominion's history, the Canada Year Book has been the official statistical record of the development of the country—its resources, institutions and social and economic conditions.

Conceived from the broadest point of view, it presents a co-ordinated picture of the progress that has been made, against a background of interpretative matter designed to give proper perspective to the different chapters.

On grounds of war-time economy, the 1943 edition of the Year Book was not published and the present volume has therefore had to be planned to cover developments over a two-year period, perhaps more important from the standpoint of the changes in our internal economy than any other like period in the Dominion's history. The problem of including all necessary new material and at the same time keeping the volume down to convenient limits has not been an easy one to solve and, wherever possible, space has had to be saved by reference to earlier editions for standard material. A carefully planned series of special articles deals, in each issue, with subjects of current importance and a list of those articles that have appeared in former issues of the Year Book is presented at the front of this volume at pp. vii to xii. The feature articles contained in this edition cover a variety of topics among which are: Canada's Present Status in the British Commonwealth of Nations, at pp. 41-47; Meteorology Related to the Science of Aviation, at pp. 24-29; The Development of Marshlands in Relation to Fur Production and the Rehabilitation of Fur Bearers, at pp. 267-269; and The Canadian Government's Reindeer Experiment, at pp. 17-23.

The War has now cut deeply into the national economic structure and the statistics of almost every chapter of this edition of the Year Book reflect the extent to which war production and war-time controls have played their parts in maintaining output and supporting the price structure against growing pressures from all sides. Public Finance is the backbone of the war effort and this chapter has been recast to adequately cover the developments taking place. The all-important subject of National Income receives new and extended treatment in Part I, at pp. 796-804; Part II deals with the subject of Dominion, Provincial and Municipal Finance; a new field is covered in Part III, where outstanding developments in taxation are discussed. It is unfortunate that due to the reorganization of income-tax statistics made necessary by the profound changes in the basis and manner of payment of this tax over the past two years, this important and, because of its broad incidence, universally interesting subject cannot be covered as completely as in former years, but the National Revenue Department has the revisions well in hand, and as soon as comparable figures are available they will appear in the Year Book again. An entirely new Section to this Part (pp. 861-872) deals with the incidence of Succession Duties on typical estates. Since the Dominion has entered this field, the application of the duties to individual estates has become very complicated and of wider interest. It is believed that the detailed tables, compiled to show combined Dominion and Provincial duties on sample estates, will be found informative and useful to many readers.

While the subject of finance in relation to the war effort is basic, and has received due attention, special material has been introduced into many other chapters to co-ordinate and explain the effects of the present world conflict on the subjects treated. The following are typical: The War and Canadian Agriculture is covered at pp. 195-201; The Influence of the War on the Pulp and Paper Industry, at pp. 264-265; The Effects of the War on the Canadian Fisheries, at pp. 277-279; The

Influence of the Present War on Manufacturing, at pp. 354-362; War-time Controls Affecting Distribution and Trade, at pp. 521-526; The War-time Control of Transportation, at pp. 567-575; and the Activities of the War-time Prices and Trade Board in Controlling Prices, Rents and Supplies, at pp. 776-783.

Recent studies have stimulated the public discussion of questions concerning Social Welfare and the Post-War Rehabilitation of Personnel from the Armed Forces to a point where it has been thought desirable to bring together the work Canada is already doing in these fields under new chapter headings wherein it is related to the investigations that have been carried on and that point the way to future developments. The advanced plans for the establishment of the new Departments of Social Welfare, Reconstruction and Veterans' Affairs also make it desirable to prepare the way for the future treatment of these subjects. The fact that their treatment was formerly scattered among the various administrations carrying on the work and appeared in several different chapters made it difficult to get a co-ordinated picture from former Year Books.

The presentation of as complete a picture of the 1941 Census as will appear in any one edition of the Year Book is given in the Population Chapter. Due to difficulties occasioned by the War, however, the census compilations are not as advanced as was expected and several *lacunæ* still appear. These will be covered in later editions. It has been possible to include, at the last minute, as Appendix III, a very complete analysis of the Occupations of the Canadian people.

The need for war-time economy expresses itself in the smaller number of coloured inserts and charts in this volume as compared with recent editions, and also in the accomplishment of having kept the edition down to within 1,150 pages, including the preliminary matter and the Introduction, although it covers a two-year period crowded with events of great significance.

The present volume has been edited by A. E. Millward, Editor, Canada Year Book, assisted by Margaret K. Pink. The proof-reading and the careful checking of data carried out by the staff have been supervised by Catherine A. Freeth. W. H. Lanceley, whose association with the Canada Year Book has been of long duration, assisted during part of the year, but he was appointed Chief of the Fisheries and Animal Products Branch of this Bureau in January, 1944, and his valuable experience and services are no longer available. Charts, graphs and layouts have been made by or under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

Acknowledgements are hereby tendered to the numerous officials of the Dominion and Provincial Governments, and to other individuals who have contributed material. Whenever possible, credit is given to the various persons and services concerned by means of footnotes to the respective sections.

With a view to the improvement of future editions, the Bureau will be glad to hear of any errors that may have escaped notice, and to receive suggestions with regard to omissions or to methods of treatment.

S. A. CUDMORE,  
Dominion Statistician.

## DISTANCES BETWEEN PRINCIPAL POINTS IN CANADA.\*

NOTE.—Generally, the distances given are the shortest by railway

A knowledge of distances in miles between principal points constitutes very useful information in these days of wide travel, but when an attempt is made to compile such data difficulties are at once encountered. Railway distances are the logical choice, even though road distances are of increasing interest to a vast body of

complexe such data utilities are at a disadvantage. Railway distances represent usually the shortest practicable land distances between two points and even to-day travellers by automobile and are a useful alternative. Again, distances by air (sometimes called 'bee-line' distances) are only useful in practice to those who travel by air, the bulk of freight and passenger traffic is by rail. Again, distances by air (sometimes called 'bee-line' distances) are only useful in practice to those who travel by air. This is a growing phase of transportation, of course, but has not yet assumed such proportions that its tabulation should displace the more usual one. Again, it is not a difficult matter to estimate air-line distances from a map made to convenient scale, whereas the ordinary reader is not able to obtain railway distances easily. Even though it be decided to adopt railway distances as most useful, it is necessary to decide whether the most travelled route between two places or the shortest

Even though it be decided to adopt railway distances as most useful, this necessarily does not mean that the shortest route should govern. In the tables given below, the distances between points are the

any railway route should provide information on the distances between the stations. The distances are compiled principally from the railway time tables. The main table includes the capital of each province and some of the routes by which the trains travel. The subsidiary tables include distances of local importance. Included in the distances from Charlottetown is the distance from Borden to Cape Tormentine, over which the trains are transported by ferry; similarly, the train ferry distance between Mulgrave and Point Turner is included in the distance from Halifax to Sydney. In the main table all the distances from Victoria include the distance travelled by boat from Victoria to Vancouver. However, wherever possible, railway distances only are used. In certain distances from Three Rivers and from Quebec it is possible, by the use of ferries, to travel by shorter routes than those given in the tables, the rail route only being taken in these cases.

Where boat routes are given, the best approximation of the distance travelled is used.																											
The air-line distances used are not necessarily the straight-line distances between points, but are the distances over the routes usually travelled by aeroplanes in good weather.

# ARTICLES AND MISCELLANEOUS TEXT MATERIAL (PUBLISHED IN FORMER EDITIONS) CLASSIFIED BY SUBJECT

NOTE.—It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions, and the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1943-44 Year Book with its predecessors in respect to matters that have not been subject to wide change. Those sections of chapters, such as Population, which are automatically revived when new material is made available from a later census, and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article takes in ground not covered in the later one. When articles cover more than one subject they are listed under each appropriate heading.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1943

NOTE.—In the following summary, the statistics of fisheries (1871-1916), trade, shipping, the Post Office, the public debt, revenue and expenditure, and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906; subsequently to years ended Mar. 31, except in the case of trade, where, as indicated by footnotes, calendar-year figures are given for certain later years. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies, construction, road transportation, vital, hospital, and immigration statistics relate to the calendar years, and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-43. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

### Comparative Expenditures for the First and Second World Wars

The following estimates are presented of the comparative financial cost to Canada of the First and Second World Wars.

**First World War.**—For the fiscal years 1915 to 1943, \$3,039,796,000, being the total of the four accounts: war and demobilization, \$1,697,613,000; pensions, \$991,030,000; soldiers' civil re-establishment, \$321,050,000; and soldier land settlement, \$30,103,000.

**Second World War.**—For the four fiscal years 1940 to 1943, \$5,934,259,390. This sum is divided by years as follows: 1940, \$118,291,022; 1941, \$752,045,326; 1942, \$1,339,674,152; 1943, \$3,724,248,890. The estimated expenditure for the fiscal year 1944, as given by the Minister of Finance in the Budget Speech of June 26, 1944, was \$4,625,000,000.

# STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

Area of the Dominion of Canada in square miles: Land, 3,466,882; Fresh Water, 228,307; Total, 3,695,189.

NOTE.—Dashes in this table indicate that comparable data are not available for the years so indicated.

<sup>4</sup> Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927.

<sup>5</sup> Revised since the publication of the 1942 Year Book.

<sup>6</sup> Includes Canadian Navy.

<sup>7</sup> Exclusive of the Territories.

<sup>8</sup> These figures are not completely comparable owing to changes in classification in 1926 and 1938.

## STATISTICAL SUMMARY OF THE PROGRESS OF CANADA—continued

The length of the Canada-United States boundary is 3,986.8 miles, and that of the Canada-Alaska boundary is 1,539.8 miles. The Canada-Labrador boundary (not surveyed) is estimated at 1,260 miles; the total mainland coast line of Canada (not accurately computed) is estimated at 14,820 miles.

Note.—Dashes in this table indicate that comparable data are not available for the years so indicated.

<sup>1</sup> Figures are subject to revision.<sup>2</sup> Figures for the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese; quantities have been calculated by reckoning cheese at 10 cents per lb. and butter at 25 cents.<sup>3</sup> 1907.<sup>4</sup> Prior to 1931 this item does not include skim milk and buttermilk.

<sup>1</sup> Figures are subject to revision.<sup>2</sup> In thousands.<sup>3</sup> The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands; those of 1891, 1901, 1911, and 1916 are for works employing only 5 hands, or over except in the case of butter and cheese factories, flour and grist mills, electric-light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures shown are for the preceding year in each case. From 1922 statistics are exclusive of construction, hand trades, repair and custom work. <sup>4</sup> Figures for 1926-43 include non-ferrous metal smelting not included in earlier years.<sup>4</sup> Includes all establishments irrespective of the number of employees.

<sup>2</sup> Since 1924 the net value of production is computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products.

<sup>3</sup> Census figure for calendar year 1930.

<sup>4</sup> Estimated on basis of intercensal survey of larger establishments.

<sup>5</sup> Fiscal years prior to 1921.

<sup>6</sup> Exports of domestic merchandise only.

<sup>7</sup> Imports of merchandise for home consumption.

<sup>8</sup> Fiscal years 1926 and prior years; calendar years 1931-43.

<sup>9</sup> Copper, fine, contained in ore, matte, regulus, etc.

# INTRODUCTION\*

## Section 1.—Canada and the War

The steps taken by Canada immediately on the outbreak of war in September, 1939, and subsequent events up to early 1942 are covered in the 1941 and 1942 editions of the Canada Year Book. During the period between the spring of 1942 and the spring of 1944 many changes have occurred in the conduct of the War. From being hemmed in and driven back in Russia, the Mediterranean and the Far East, the Allies have moved to the offensive and are now attacking the enemy on all fronts.

Canada has taken an active part in turning the tide of the War. The Armed Forces increased in strength from 505,000 in September, 1942, to 765,000 in May, 1944; the Navy increased from 300 ships to more than 700 in the same period; Canada has become the third largest naval power and the fourth air power of the United Nations; Canadian women in the Armed Forces increased in number to more than 32,000 by May, 1944.

A long and what must have been at times a trying period of intensive training and waiting has been brought to a close for Canadian troops by participation in several military operations, including the conquest of Sicily, the invasion of Italy, the occupation of Kiska in the Aleutian Islands and finally the invasion of Western Europe. Since mid-November, 1943, the Canadians in Italy have been operating as a self-contained Canadian Corps attached to the British Eighth Army.

In action as a Corps for the first time in the 1944 Italian Campaign, the Canadians played a prominent part in the attack on the Hitler Line which opened the way for the Allied advance up the Liri and Sacco Valleys to Rome.

In the pre-invasion aerial bombardment of enemy communications, industrial centres and coastal fortifications of Western Europe that was carried out with increasing intensity during April and May, 1944, Canadians serving with the Royal Canadian Air Force and Royal Air Force took an active part. Canadian troops were among the Allied Forces which landed on June 6, 1944, on the northern coast of France. Units of the Canadian Navy and Air Force supported the invasion.

In organizing for war on the home front, among the first and most important measures introduced were those designed to control the country's economy and prevent inflation. Late in 1941 wages were stabilized, a price ceiling was set, and a cost-of-living bonus was introduced to compensate for cost-of-living increases. In December, 1943, a policy of revised wage control and a new labour code by which the cost-of-living bonus was to be absorbed into basic pay rates was announced. Further bonus increases will not be made, but in the event of an appreciable change in living costs, there will be a general review of the Government's stabilization policy. A floor under farm prices was also assured. (See p. xlii.)

During 1943 the national income rose to a new high of \$8,000,000,000, an increase of 17.3 p.c. over 1942. At the same time the cost-of-living index was kept to an almost stationary level. It rose only about 3 p.c. from the establishment of the price ceiling in December, 1941, to May, 1944. In the period between the outbreak of war and the introduction of price control it had increased 15 p.c.

---

\* The purpose of this Introduction is to co-ordinate the picture of Canada's war effort, which is dealt with piecemeal in the chapter material following. It also brings that material up-to-date to the time of going to press. It has been built up from material supplied by the war-time and permanent Departments to which reference is made in the text.

In the early stages of the War it was felt that Canada's industrial role would be confined to the production of materials and equipment mainly for Canadian troops, with limited quantities of guns and aircraft for the United Kingdom. As a result of the industrial expansion organized by the war-time Department of Munitions and Supply, however, Canada now ranks fourth among the United Nations in the production of war supplies; these are being sent to all the war fronts.

The development of war-time industries, however, has not been allowed to interfere with Canada's production of foodstuffs and raw materials. Agriculture has lost many men to the Armed Forces and industry, but despite a manpower reduction of 23 p.c. since the beginning of the War, total agricultural output has increased more than 50 p.c.

The distribution of manpower not only in agriculture but throughout industry has been increasingly important as the War has progressed, and during 1943 the problem was brought under centralized control (see p. xlii). In January, 1943, the National Selective Service regulations were passed which consolidated several Orders in Council in effect since March, 1942. These regulations were designed to maintain and increase the manpower available for the Armed Forces and vital industries and services by reducing the number of persons employed in less essential activities.

It has been the tremendous job of Selective Service to obtain as well as distribute the manpower necessary for Canada's part in the War. By the end of 1943 the gainfully occupied population, including members of the Armed Forces, was estimated at 5,100,000, and 57 p.c. of all persons 14 years of age or over were either in the Armed Forces or at work.

The Government has taken steps to provide for the gradual and economic disposal of surplus war materials or those that are obsolete. A Committee, known as the Crown Assets Allocation Committee, upon which agriculture, labour, householders and the Government Departments concerned are represented, was set-up by Order in Council during the latter part of 1943 and started functioning immediately. A Bill is now before Parliament designed to give statutory incorporation to this arrangement. An agreement between the War Assets Corporation and the parallel disposal agency of the United States Government has been reached to the effect that neither country will dump its surplus war equipment in the other.

Always a trading nation of considerable importance, Canada has, during the War, become the world's third largest external trader as a result of increasingly large exports of war supplies and foodstuffs. During 1943 Canada's trade attained a record value of \$4,736,429,169. In the first four months of 1944, combined imports and exports had risen more than 20 p.c. compared with the same period in 1943. The Government is planning to make provision for the insurance or guarantee of export credits to assist the development of post-war export markets for primary and secondary industries.

With the full realization that the provision of materials to the common cause is no less vital and no less a duty than the provision of fighting men, Canada passed the Mutual Aid Act in May, 1943. It provides for the distribution of Canadian war supplies, including war equipment, raw materials and foodstuffs, to the United Nations to the value of \$1,000,000,000 on the basis of strategic need in excess of what can be paid for. Instead of acting through the United Kingdom, as during operation of the previous contribution of \$1,000,000,000 placed to the credit of the United Kingdom for the purchase of Canadian war supplies, Canada now negotiates directly with each country concerned. Agreements have been signed with the United Kingdom, Australia, Soviet Russia, China and the French Committee of

National Liberation. The agreements contain a pledge of reciprocal aid to Canada and a mutual undertaking to pursue international economic policies designed to implement the economic objectives defined in the Atlantic Charter and accepted by all the United Nations.

The Mutual Aid appropriation for the fiscal year ending Mar. 31, 1945, is \$800,000,000, which will include Canada's contribution to the United Nations Relief and Rehabilitation Administration.

In addition to Canada's commitments under Mutual Aid, since August, 1942, a gift of 15,000 tons of wheat has been sent to Greece each month. In November, 1943, Canada's offer of 100,000 tons of wheat to alleviate famine in India was accepted.

In the international field Canada has begun to take an important part in post-war affairs. At the United Nations Relief and Rehabilitation Administration conference in November, 1943, Canada was elected to the chairmanship of the Committee on Supplies (the Minister-Counsellor at the Canadian Embassy in Washington assumed the position) and to membership on the Committee on Europe. Canada will be a chief contributor of foodstuffs, especially wheat, for the relief of countries liberated from the enemy.

Canada has taken an active part in several conferences and on boards designed to co-ordinate plans for food and supplies of the United Nations. Canada was represented at the United Nations Food Conference in May, 1943, and a Canadian was subsequently chosen chairman of the United Nations Interim Commission on Food and Agriculture.

On Nov. 10, 1942, Canada was made a full member of the Combined Production and Resources Board, the principal object of which is to combine the production programs of the United Kingdom, United States and Canada into a single integrated plan. In March, 1943, the Joint Agricultural Committee was set up by Canada and the United States. On Oct. 29, 1943, Canada was admitted to full membership on the Combined Food Board. That Board's purpose is to obtain a planned expeditious utilization of the food resources of the United Nations.

During the past two years close understanding and co-operation among the three major powers, Russia, the United States and the United Kingdom, have been implemented at several conferences. In August, 1943, Canada was host to Prime Minister Churchill and President Roosevelt at Quebec City at their sixth war-time conference. At this Conference, British, United States and Canadian experts conferred *in camera*. For the first time the United Kingdom War Cabinet and the War Committee of the Canadian Cabinet met in joint session. During the Conference the Joint Canada-United States War Aid Committee was set up to study the problems of lend-lease and mutual aid. Mr. Roosevelt later visited Ottawa—the first United States President to visit the Canadian capital.

Canada was not separately represented at the Teheran Conference in December, 1943, but the Canadian Prime Minister later stated that both the Cairo and Teheran declarations "are the result of and are based upon confidence and good will between the great powers representing the United Nations in the present world struggle for freedom".

In April, 1944, the Prime Minister journeyed to London to attend the first war-time conference of Commonwealth prime ministers. At that important meeting, Commonwealth affairs were discussed against a background of international world organization and post-war policy. While in London, Prime Minister King addressed a joint session of the British House of Commons and House of Lords.

Canada's increased international stature is reflected in the announcements of November and December, 1943, that the Canadian legations at Washington, Moscow, Chungking and Rio de Janeiro would be raised to the rank of Embassies. On Mar. 16, 1944, a Canadian Ambassador to Mexico was appointed. The Embassy at Washington was the first to be established by any British Dominion. Among British countries Canada's diplomatic corps is second in size only to that of the United Kingdom.

Canada has planned and put in operation what is considered to be one of the most advanced and comprehensive rehabilitation programs for men and women in the Armed Forces. (See Chapter XXI.) Each of the Services has its personnel counsellors to advise on post-war training and positions available. An extensive scheme for guiding demobilized persons has been worked out, and every man and woman will have the benefit of expert advice before resuming civilian life. Through the Veterans' Land Act, financial assistance will be given by the Government to Service personnel wishing to settle on the land.

While beginning to plan for the Peace, Canada has geared all her resources to finishing the War, regardless of cost. The increasing size of the Armed Forces and the expanding production of equipment and supplies vital to the United Nations has brought the daily war costs in Canada, on a per capita basis, from 32 cents in 1941 to 89 cents in 1942 and \$1.16 in 1943.

### National Defence

**The Organization and Administration of National Defence.**—No noteworthy changes have taken place in the basic organization of the Department of National Defence since those published at p. xxvi of the 1940 edition of the Year Book.

**The Navy.**—To meet the continually increasing demands upon its services, the Royal Canadian Navy has, during the past year, continued its expansion both in personnel and ships. With additions to its original size, the Naval Board, advisory body to the Minister of National Defence for Naval Services, now has 7 members and one civil member; it is composed of the Deputy Minister for Naval Services, the Chief of Naval Staff, Vice-Chief of Naval Staff, Chief of Naval Personnel, Chief of Naval Equipment and Supply, Chief of Naval Engineering and Construction, the Chief Staff Officer Reserves, and a Secretary. .

On Mar. 9, 1944, the number of officers and men together with 4,500 members of the Women's Royal Canadian Naval Service, totalled more than 80,000: there were 700 ships flying the White Ensign under the command of the Royal Canadian Navy; 250 of this number were fighting ships, including aircraft carriers (R.N.) manned by Canadians, auxiliary cruisers, destroyers, frigates, corvettes, mine-sweepers, motor torpedo-boats, patrol vessels and auxiliary craft.

The number of ships had increased fifty-fold in a little over four years. Personnel had increased forty-five times. In September, 1939, there were only two naval bases, one at Halifax and the other at Esquimalt, B.C. These two have been greatly expanded and improved and, in addition, eleven new bases have been developed on east and west coasts and in Newfoundland.

The Royal Canadian Naval College was opened at Royal Roads, B.C., in October, 1942, with 100 students enrolled; 43 midshipmen were graduated in the spring of 1943 and are serving at sea with the R.C.N., on loan to the R.N. or as members

of the R.C.N.V.R. Nearly 15,000 sea cadets in 86 sea cadet corps across Canada are receiving training at summer camps and weekly lectures; 5,000 former cadets are now in the naval service.

Training given at 20 R.C.N.V.R. Divisions throughout the provinces is supplemented at H.M.C.S. *Cornwallis*, N.S., where more than 7,000 officers and men are accommodated for special courses. About 4,500 men have been trained in civilian schools since the outbreak of war in their chosen trades; 1,000 more are under training; 1,500 enrolments have been received in the university naval training divisions, in which 15 Canadian universities are taking part.

With the addition of Tribal destroyers, the R.C.N. is equipped with the newest and fastest destroyers in the world. Almost the entire number of smaller Canadian fighting ships has been built in Canadian shipyards which have also built nearly 100 ships for the Royal Navy and a few for the United States Navy.

In addition to its early war tasks of guarding the coasts of Canada, the escorting of convoys, the destruction of enemy submarines and shipping, the R.C.N. has joined with the R.N. and the U.S.N. in taking offensive action, serving in every sea of the world. Canadian corvettes took part in the Mediterranean campaign in 1943; corvettes and a flotilla of motor launches saw duty in the Caribbean area; Canadian ships participated in the Aleutian Islands campaign; four Canadian flotillas of landing craft took part in the invasion of Sicily and were on duty in the Straits of Messina during the invasion of Italy.

In the summer of 1943 enemy mines were cleared from the path of convoys at the mouth of Halifax harbour without loss of life or convoyed shipping. Canadian Tribal destroyers were with the convoys off Bear Island on the way to Murmansk when the *Scharnhorst* was torpedoed in December, 1943. H.M.C.S. *Athabaskan* was engaged in offensive operational work in the Bay of Biscay when she was the first ship to be attacked by the newly-developed aerial German bomb. She was later sunk off the coast of France, while on patrol duty in the English Channel.

In 1944 the Naval Minister announced the acquisition from the Admiralty of two modern cruisers and two aircraft carriers to be manned by Canadian naval crews. Many officers and some ratings who have served with the Royal Navy in British ships of larger types but will now have the opportunity of manning larger Canadian ships. Besides these larger vessels, 100 other fighting ships as well as a considerable number of auxiliary craft are to be added to the strength of the Canadian Navy.

The Canadian Navy is operating in many waters but its special area is the north Atlantic over which must pass supplies produced in Canada and the United States for the United Nations overseas. On this route Canada has supplied sometimes 48 p.c. (never less than 40 p.c. in the past two years) of the convoy escort. From the beginning of the War to the end of 1943 the Canadian Navy escorted or assisted in escorting more than 18,000 ships from North America to Europe and about 114,000,000 dead-weight tons of shipping safely made this perilous crossing. In addition the R.C.N. assisted in the conveying of some 10,000 ships from United Kingdom ports to ports on this continent, and 20,000 ships have sailed in Canadian coastal convoys from one point to another on the North American Continent. Nearly 50,000 ships in one way or another have come under the protection of the Canadian Navy.

The R.C.N. has not been able to undertake its hazardous duties unscathed. Its losses in ships are listed as five destroyers, *Fraser*, *Margaree*, *Ottawa*, *St. Croix* and *Athabaskan*; two minesweepers, *Bras d'Or* and *Chedabucto*; one frigate, *Valleyfield*; six corvettes, *Windflower*, *Spikenard*, *Charlottetown*, *Levis*, *Louisburg* and *Weyburn*; and two patrol vessels, *Otter* and *Raccoon*.

The casualty lists, too, show part of the price that Canada's Navy has paid, with more than 1,146 dead, 184 wounded, 8 prisoners of war and 329 missing to the end of the first quarter of 1944.

**The Army.**—In the summer of 1943 the invasion of Sicily brought to an end for the Canadian Army the more than three years of watchful waiting in Britain and the long preparation for attack.

The Canadian 1st Division, commanded by Major-General Guy Simonds, took part in some of the heaviest fighting of the Allied 39-day campaign which followed. Its task was to drive through the centre of the Island, between the British and United States troops. In the closing stages of the battle the Canadians, with the British 78th Division of the Eighth Army, broke through the Mount Etna line and started the enemy retreat to the evacuation port of Messina.

Fighting men of the First Division were again side-by-side with the famous Eighth Army when the direct assault on Italy began and in the bitterly fought advance up "the boot". At first the Canadians were again on the left flank of the Eighth Army, with their tried friends of the 78th Division on their right and the Americans on their left. Later, however, the Canadians took their turn on the narrow strip along the Adriatic. On the former front their share in forcing the Sangro River was distinguished; on the latter the Canadian name is definitely associated with Ortona and the Moro River.

It was after these battles, and after the flanking drive toward Rome had been checked by the severity of winter conditions, that most of another Canadian Division came, and with them additional corps troops to complete the constitution of a Canadian Corps in Italy. The first action in which the Canadians engaged as a Corps resulted in the taking of Pontecorvo after extremely bitter fighting, a substantial contribution toward the smashing of the Adolph Hitler line. This led to the singling out of the Canadians for special mention in the official communique of May 24, 1944.

The Canadian component of a joint Canadian-American unit is taking part in operations in Italy, its roles including those of commando, airborne and parachute troops. In addition, a Canadian parachute contingent is now overseas.

It was also in the summer of 1943 that Canadians took their first offensive step against Japan. A Canadian Brigade joined with United States troops to occupy the key Aleutian Island of Kiska, which, however, had been vacated by the Japanese before the Allied landing. Troops from all across the Dominion, a large proportion of them soldiers called for service under the National Resources Mobilization Act, took part in this operation.

The Field Force of the Canadian Army Overseas now consists of the First Canadian Army of two Corps, three Infantry Divisions, two Armoured Divisions and two Armoured Brigades. Besides these there are large numbers of ancillary or corps troops, concerned with communications, repairs to equipment, transport of supplies, medical and hospital services and many other functions.

During the past year reorganizations in the Army overseas were effected in order to obtain a greater degree of conformity to British Army organization, and thus facilitate employment of the Canadian Army, in whole or in part, with British formations.

One of the most important of these organizational changes was the formation of the Corps of Royal Canadian Electrical and Mechanical Engineers (RCEME), which has taken over from the RCOC all its engineering and maintenance functions, the latter Corps retaining responsibility for provision. RCEME has also assumed certain engineering and maintenance functions formerly exercised by the Artillery, Engineers and Signals Corps.

The organization of the Army in Canada has also undergone changes during the past year, as a result both of the considerable improvement in the general strategic situation and of the completion of capital requirements for the Army overseas. These two factors have permitted substantial reductions in the forces maintained for the defence of Canada and in training establishments. The result of the reduction of operational troops in Canada was the despatch of additional units overseas and the release into the reinforcement stream of considerable numbers of General Service personnel.

In the reorganization of centres for the training of reinforcement personnel, certain basic training centres have been designated for recruits for armoured, infantry and medical corps. Such centres are specifically associated with, or linked to, the advanced or corps training centres of the arm of the service concerned. In the case of the artillery, engineers, signals, ordnance, army service and provost corps, it has been found possible to link both basic and advanced training at the same corps training centre.

Officer requirements now are principally to replace casualties and wastage. Curtailment in officer-training facilities has accordingly been effected by the closing of the Officers' Training Centre at Gordon Head, B.C. It proved possible during the year for the Canadian Army to lend to the British Army several hundred infantry reinforcement officers.

Figures at May, 1944, showed the strength of the Active Army to be in excess of 480,000 men. Of this number, over 407,000 had enlisted for General Service. The Canadian Women's Army Corps, whose members are releasing men for service in active theatres of war, numbered at May, 1944, over 13,000.

The Reserve Army, with a strength at May, 1944, of over 104,000 (including the COTC and Pacific Coast Militia Rangers), continued its role at home and added reconnaissance and anti-aircraft training to its program.

**The Air Force.**—By the spring of 1944, the Royal Canadian Air Force had reached the peak of its plans for expansion in training but not anywhere near the peak of its plans for aggressive action. Thousands of Canadian airmen had seen service overseas and many more thousands were waiting, trained and eager, to take their places in air combat.

From three Canadian squadrons which went overseas as units in 1940, the R.C.A.F. in early 1944 had 42 squadrons on actual operations overseas—bomber, fighter, reconnaissance, coastal command, night fighter and intruder squadrons—and provision was made to bring overseas establishment up to 44 squadrons. Several squadrons, notably those flying Mosquitoes and Lancasters, were equipped with aircraft made in Canada.

During 1943, R.C.A.F. aircraft flew more than 20,000,000 miles on operations overseas. R.C.A.F. Bomber Group dropped a greater bomb tonnage in a single night's operations than the Luftwaffe had dropped on London in a single night at the height of the Battle of Britain—1940.

In addition to being the principal trainer of aircrew for all the British Commonwealth forces under the British Commonwealth Air Training Plan (see p. xxix of the 1940 Year Book and p. xxxii of the 1941 Year Book), Canada manned and paid all maintenance costs for her 42 units overseas. Nearly all commanding officers, aircrew and groundcrew of the 42 squadrons were Canadian. Moreover, for every Canadian in R.C.A.F. aircrew, there were another ten Canadian aircrew scattered through the R.A.F. One-quarter of all aircrew in European and Mediterranean areas were Canadians trained in the R.C.A.F.

Canada accepted responsibility for providing air protection for convoys in the western Atlantic. A gauge of R.C.A.F. success in hunting submarines is the fact that, whereas U-boats formerly were sighted once for each 840 hours of flying time, an average of 1,700 hours of operational searching was required to locate each one in 1943-44. Since the first R.C.A.F. attack on a U-boat in October, 1941, there have been 63 attacks on submarines and more than half of these were made in 1943. Canadian squadrons operated from Labrador, Newfoundland, and Iceland, as well as from Canadian bases.

As a morale measure, an overseas mail squadron was inaugurated Dec. 15, 1943, to fly mail to Canadian servicemen stationed along the 15,000-mile round trip route covered. Its operation proved most effective.

Strength of the R.C.A.F. grew from 4,000 in September, 1939, to a 1943 establishment in excess of 206,000. Instructors, staff men, mechanics, engineers and others in 50 different trades trained by the R.C.A.F. totalled 114,000. Production of aircrew has been the primary purpose. By the end of 1943, more than 86,000 aircrew—pilots, navigators, wireless air gunners, air bombers, flight engineers, and air gunners—had been trained. Of these, over 56 p.c. were Canadian. By the end of May, 1944, 100,000 aircrew had been graduated.

Peak development of training facilities was realized in 1943 and decision to reduce the intake of aircrew and to prune the machinery was made, with the object of bringing the greatest possible weight of air strength to bear on the enemy through employment of instructors and trained groundcrew in operational spheres. The first units closed were R.A.F. schools that had been transferred to Canada. It was decided to progressively close these as their activities were dovetailed into the schedules of Canadian stations. Up to that point, the British Commonwealth Air Training Plan had cost Canada alone more than \$1,635,000,000.

During 1943 training aircraft were obtained with greater ease than previously and the supply of elementary and service training 'planes was adequate. By April, 1944, the Air Training Plan had almost 12,000 'planes. Of these, more than 5,000 were single-engined and nearly 6,000 twin-engined aircraft. Cornells were used chiefly for elementary training. Harvards and Yales were used as single-engined trainers; Ansons, Cranes, Oxfords, Beechcraft and Lockheed as twin-engined trainers. Bombing and gunnery schools used Battles, Bolingbrokes and Lysanders; wireless schools had Forts, Harvards, Yales and Norsemen. The Norseman also was utilized in single-engined transportation. Operational training employed Hurricanes, Cansos, Liberators, Mitchells, Mosquitoes, Beechcraft, Dakotas, Venturas, Baltimores and Swordfish. Of all these, the following were made in Canada: Cornells, Ansons, Lysanders, Bolingbrokes, Harvards, Hurricanes, Cansos and Mosquitoes.

**Honours and Decorations.**—The following tabulation shows the awards to Naval, Army and Air Force personnel and to civilians for the period from the outbreak of war to Mar. 31, 1944.

HONOURS AND DECORATIONS AWARDED TO CANADIANS FROM THE OUTBREAK OF WAR TO MAR. 31, 1944

### The Economic Effort and Its Organization

Modern war requires the full and effective mobilization of the nation's economic resources to equip and supply the fighting forces and to maintain the civil population while as much as possible of the national effort is devoted to the prosecution of the War. For Canada this implies not only the provision of men and materials for her own fighting forces but the furnishing of food, materials, munitions and equipment to Britain and other Allies. The demands for manpower are therefore urgent for the making of munitions and war supplies as well as for the Services—the Navy, the Army and the Air Force.

Fortunately, so far as financial organization is concerned, the Canadian financial structure was already well developed before the War to a point where it had proved its suitability to the country's needs and its adaptability. The strain of war and

Canada's accomplishment in meeting such a high proportion of the direct cost of the War, while at the same time providing Britain with very extensive financial assistance in obtaining war supplies in Canada, has been further evidence of this.

In the First World War, Canada's munitions output was limited to shells and rifles. Ships and aeroplanes, Bren guns, heavy machine guns, Browning guns, sub-machine guns, AA guns, anti-tank guns, trench mortars, 25 pounders, naval guns, tanks, universal carriers, etc., are but a few of the munitions now being supplied in quantity for use in almost every theatre of war.

During the course of the War a serious exchange problem developed in the form of a shortage of U.S. dollars resulting from the growing need of obtaining essential materials of war from that country. This was met very effectively by the policies carried out by the Foreign Exchange Control Board and by the arrangements made under the Hyde Park Agreement. The situation has improved very much during the past year.

A review of the financing of Canada's war effort down to June 1941, is given at pp. xxxiv-xxxvi of the 1941 Year Book. This has also been summarized and brought up to 1943 in the Public Finance chapter of this volume.

**Financing Canada's War Effort, 1943-44.**—On pp. 808-811 will be found an account of Canada's war finance up to the end of the fiscal year 1942-43. It is a story of rapidly mounting expenditure necessitated by the swiftly rising level of war activities, and of sharp tax increases and great loan campaigns to meet these costs; for the problems of finance have not been allowed to limit the war effort, but rather the physical burden of war production and mobilization has determined the financial burden that has had to be met. By 1943-44, however, tax levels had already reached the point where it would be difficult to increase them without causing undue hardship in particular cases, and consequently the Budget of Mar. 2, 1943, was concerned mainly with adjustments and modifications in existing taxes. A number of increases in commodity taxes were introduced, but the most important change was a measure to place personal income-tax payments on a "pay-as-you-earn" basis. Tax deduction at the source wherever possible and instalment payments in other cases had been introduced in the previous Budget (June 23, 1942), and these payments were now made to apply to current income. This involved cancelling half the tax liability on 1942 incomes (except on investment incomes in excess of \$3,000, in which case half the tax was deferred until the death of the taxpayer), but the change as a whole actually resulted in an increase in tax receipts for the year since it brought forward to Apr. 1, 1943, a higher rate of tax deductions which otherwise would not have applied until Sept. 1.

Though the books were not yet closed, it was estimated in the appendix to the Budget of June 26, 1944, that expenditures during 1943-44 totalled \$5,360,100,000, made up as follows:—

	<i>Million Dollars</i>
Ordinary expenditure.....	630.2
Capital expenditure.....	2.7
War expenditure.....	3,712.0
Mutual Aid.....	912.6
	<hr/> 4,624.6
Special expenditure.....	37.4
Government-owned enterprises.....	1.3
Other charges.....	63.9
Total Expenditure.....	<hr/> 5,360.1 <hr/>

After deducting an estimated \$115,000,000 for personal income taxes refundable after the War, and \$40,000,000 for refundable excess profits taxes, revenues were estimated at \$2,700,700,000, comprising:—

	Million Dollars
Customs and excise revenue.....	948.6
Personal income tax.....	698.4
Corporate income and excess profits taxes.....	740.1
Other tax revenue.....	49.7
	<hr/> 2,436.8
Other ordinary revenue.....	139.9
	<hr/> 2,576.7
Total, Ordinary Revenue.....	2,576.7
Special Receipts and Credits.....	124.0
	<hr/> 2,700.7
Grand Total Revenue.....	<hr/> <hr/> 2,700.7

Thus the deficit for 1943-44 was estimated at \$2,659,400,000. However, governmental activities require numerous outlays other than those that may properly be described as expenditures; there are many loans and advances for war and other purposes which will be repaid eventually, and so are not expenditure in the accounting sense, but which require to be financed nevertheless. These outlays are offset to some extent by receipts in certain funds held by the Government as a trustee, but the net effect of all these transactions is that cash receipts (other than from borrowing) for 1943-44 were estimated to be \$2,935,100,000 less than cash requirements. This "cash deficiency" was met in part by a reduction in cash balances, but principally by borrowing. The two main loan flotations were the Fourth Victory Loan, which yielded \$1,308,700,000, and the Fifth Victory Loan, yielding \$1,375,000,000 in cash and \$195,600,000 from the conversion of previous issues.\*

In presenting the Budget for 1944-45, the Minister of Finance indicated that expenditures were likely to exceed the total of \$5,152,000,000 already requested of Parliament, because of the intensification of military operations overseas. He pointed out that there would be substantial requirements for cash outlays in addition to expenditures, probably making total cash requirements for the year of \$6,000,000,000 or more. He estimated revenues would amount to approximately \$2,617,000,000, and that total borrowings for the year would have to exceed \$3,200,000,000.

Reliance is to be placed upon a further expansion of voluntary savings, particularly on the part of individuals, to obtain these funds. The Minister proposed that the compulsory savings introduced in 1942 should be discontinued as from July 1, 1944, because it was being commonly regarded as a tax and was a barrier to production. Special tax measures relating to business were proposed to encourage the preparation for post-war expansion. The Customs duties and the War Exchange Tax on agricultural implements were removed. The prohibitions or restrictions imposed on imports under the War Exchange Conservation Act were all removed as well.

*War-time Control of Foreign Exchange.*—Restrictions on the use of foreign exchange have continued without material change from the situation described on pp. xxxiii and xxxiv of the 1942 Year Book. As a result of the measures there described, however, the extreme stringency of the earlier period has been relieved somewhat, as outlined to Parliament by the Minister of Finance on May 18, 1944, when announcing some moderation of the limitations on the use of United States funds for travelling in that country.

\*The Sixth Victory Loan, with an objective of \$1,200,000,000, was launched in May, 1944, and was quickly over-subscribed. By the end of the drive on May 20, the amount subscribed exceeded by nearly \$25,000,000 the amount subscribed at the corresponding period of the Fifth Loan drive. The number of individual subscribers was also greater. On July 6, the Minister of Finance announced in the House of Commons that total sales in the Sixth Victory Loan campaign amounted to \$1,407,547,650.

**The Department of Munitions and Supply.**—An account of the establishment and the administrative functions of the Department of Munitions and Supply appears in the Miscellaneous Administration Chapter of the 1942 Year Book, at pp. 942-943.

The Department was organized in order to centralize all purchasing functions on behalf of the Armed Forces, except for certain construction and like facilities, for which contracts continued to be let directly by other Departments, such as Transport, National Defence and Public Works. The Minister is empowered to examine into and to organize, mobilize, and conserve the resources of Canada for the purpose of furnishing munitions of war and supplies.

The Department does all the essential purchasing for the Canadian Armed Forces, as well as for the British Commonwealth Air Training Plan, the United Kingdom Technical Mission, the British Admiralty Technical Mission, and the governments of the Allied Nations. Through a system of Controllers\* for coal, rubber, aircraft, oil, timber, steel, machine tools, power, metals, motor-vehicles, ship repairs and salvage construction, transit, and chemicals, it maintains a strict supervision over certain industries. The Controllers are organized into a Wartime Industries Control Board which acts as a mutual consultative agency and maintains direct liaison with the Wartime Prices and Trade Board (p. xxxix) for the co-ordination of orders affecting the several industries.

The need to extend and create new industrial facilities in Canada for purposes of war production led to the development of an extensive program of capital assistance to industry by the Government of Canada. Plants were built and machine tools purchased with Government funds, but in most cases, the operation of such new facilities was left to private interests under specified conditions and subject to the Department's supervision, ownership being retained by the Government. Moreover, the Canadian Government set up wholly owned Crown companies for the manufacture of small arms, precision instruments, synthetic rubber, ships and other war supplies, and other such companies to engage in special purchasing and supervisory functions.

The task of providing for the manufacture of modern mechanized equipment involved not only the expansion of production familiar to Canadian industry but also the production of equipment never before manufactured in Canada. The list of these items is impressive and includes war vessels, tanks, field, naval and anti-aircraft guns and equipment, precision instruments for anti-submarine and anti-aircraft defence, armour plate, bombs, and various component parts of war equipment. The developments in these fields are referred to in the chapters dealing with the particular industries.

The total value of contracts awarded by the Department, and its predecessor bodies, since the beginning of the War to Feb. 29, 1944, exceeded \$10,032,000,000, while commitments for capital assistance to private industry and to Crown companies exceeded \$860,000,000.

**The Department of National War Services.**—An account of the establishment and functions of this Department is given in the Miscellaneous Administration Chapter of the 1942 Year Book, at pp. 943-945. No recent changes have taken place and, owing to pressure on space, that material is not repeated.

---

\* These are dealt with in detail in the appropriate chapters of this volume; see the various sections under "Controls" in the Index.

**The National Film Board.**—As the statutory film authority for the Canadian Government, the National Film Board produces or arranges for the production of films on behalf of all Government Departments and Divisions; these are distributed to approximately 840 theatres in English-speaking Canada and 60 theatres in French-speaking Canada. A wide distribution is made to theatres in the United Kingdom, Australia, New Zealand, the Union of South Africa, the British West Indies and Latin America. Non-theatrical distribution is arranged through the Central Government Film Distribution Service.

**The Wartime Prices and Trade Board.**—The Wartime Prices and Trade Board was constituted by Order in Council under the War Measures Act on Sept. 3, 1939, "to provide safeguards under war conditions against any undue enhancement in the prices of food, fuel and other necessities of life and to ensure an adequate supply and equitable distribution of such commodities". The Board was given extensive powers to fix maximum prices or markups, to control imports or exports of any necessity of life, to buy or sell and allocate supplies, to license manufacturers and to make investigations.

During the first two years of the War the Board was mainly concerned with organizing supply and preventing the occurrence of avoidable shortages. Direct price fixing was only very rarely necessary. The Board appointed administrators to take charge of wool, sugar, hides and leather, coal, oils and rents. Extensive powers were delegated to the Administrators who were concerned chiefly with the organization of supplies. Rents were brought under jurisdiction of the Board in September, 1940, and were pegged in a large number of congested areas.

As the war program expanded, persistent shortages began to develop and, starting in April, 1941, the cost-of-living index rose sharply, largely as a result of rapidly increasing food prices. Against this background the Government decided upon a policy of overall price and wage ceilings, which came into effect on Dec. 1, 1941 (see pp. 776-783).

With the introduction of overall price control the Board was reorganized, Administrators being appointed for each branch of industry. These Administrators supervise all controls over their respective products until they reach the wholesaler. From this stage control is generally exercised through a Wholesale Trade Administrator and a Retail Trade Administrator. Many of the Administrators are assisted in their work by Advisory Committees representing the industries under their control. Related industries are grouped under six co-ordinators: distributive trades (including wholesale trade, retail trade and services); foods; textiles and clothing; metal and wood products; pulp and paper; and real property. The activities of the various administrators are correlated and supervised by the different Head Office Divisions. Proposals for Administrators' Orders dealing with pricing or supply are reviewed by either the Prices Division or the Supply Division and must be approved by the Chairman of the Board. Other Head Office Divisions deal with distribution, research and statistics, enforcement, public information, industrial problems, and liaison with consumers. Under the Consumer Branch there are 166 Women's Regional Advisory Committees and some 10,000 liaison officers keeping the Board in close touch with consumer opinion and disseminating information on Board policy and regulations to consumers. Contact with consumers, producers and dealers in different localities is greatly facilitated by the Board's Regional Offices located in the larger cities and by the Local Offices of which there are over 100. In addition there are over 500 local ration boards, usually under the chairmanship of the local mayor or reeve and serving without remuneration.

Subsidies and bulk purchases authorized by the Board are administered by the Crown companies associated with the Board. These are the Commodity Prices Stabilization Corporation Limited, Canadian Wool Board Limited, Wartime Food Corporation Limited, and Wartime Salvage Limited.

*The Field of Jurisdiction of the Wartime Prices and Trade Board and Co-operation with Other Bodies.*—The Board was given powers to control the *prices* of all goods and services and the *supply and distribution* of those goods and services which do not come under the authority of a Controller in the Department of Munitions and Supply (see p. xxxviii). In general this means that the Board has jurisdiction over the supply and distribution of those raw materials and finished goods which are required chiefly for civilian use, while the Department of Munitions and Supply has control over those required chiefly for war purposes. In March, 1943, a wide range of metal consumer goods was transferred from the jurisdiction of the Controller of Supplies to that of the Wartime Prices and Trade Board.

In practice some overlapping developed between the Board and the Departments of Agriculture and Fisheries in regard to control over the production of various food products. The division of authority was clarified in February, 1943. Broadly speaking, the Departments of Agriculture and Fisheries control production and exports of these commodities, while the Board controls imports and domestic distribution.

The Board works in close co-operation with other Government Departments both in Canada and elsewhere. Members of the Board itself are senior officers of related Departments of Government: Finance, Agriculture, Labour, Munitions and Supply, Trade and Commerce, and National Revenue. Particularly close relations are maintained with the Wartime Industries Control Board since the work of the two Boards is interrelated and in many cases the W.I.C.B. controls the raw materials used in products under the control of the Prices Board. The chairman of each Board is a member of the other and each Controller is also an Administrator of the Wartime Prices and Trade Board and acts as such in pricing matters. In addition individual Administrators and Controllers are in close touch on matters of common interest.

Similarly close contact is maintained with the Department of Agriculture and several Administrators under the Agricultural Supplies Board (see p. xliv) were appointed Administrators of the Wartime Prices and Trade Board. The Board is also represented on a number of interdepartmental committees concerned with the allocation of supplies and similar functions. Among these are the Food Requirements Committee, the National Textile and Leather Requirements Committee, the Interdepartmental Labour Priorities Committee, the Canadian Shipping Board, and the Export Control Committee.

The Board maintains offices at Washington and London and it negotiates with the United States War Production Board, the British Board of Trade, Ministry of Supply, and similar agencies, to obtain supplies required by the Canadian civilian economy. Through the Washington representative and other officers the Board keeps in touch with the international Combined Boards functioning in Washington.

In its administration of the overall price ceiling the Board has been faced by problems resulting from shortages, from rising costs, expanded consumer purchasing power and the appearance of new goods on the market. Steps taken by the Board to ensure adequate civilian supplies and orderly distribution are discussed on pp. 521-525 and 776-783.

**The Wartime Information Board.**—The Wartime Information Board was established by Order in Council on Sept. 9, 1942, with the object of "ensuring an informed and intelligent understanding of the purposes and progress of the Canadian war effort". The Board, consisting of a Chairman, a Vice-Chairman and eight members, is responsible to the Prime Minister as President of the Privy Council and as Chairman of the War Committee of the Cabinet.

The powers relative to public information formerly vested in the Minister of National War Services were transferred to the Board. In particular, it is the duty of the Board to supervise Canadian information in countries outside of Canada, to co-ordinate other public information services of the Government, and to provide means and facilities for the distribution within and without Canada of Canadian war information. Operations of the Board are carried out under the direction of a General Manager responsible to the Board.

In addition to headquarters at Ottawa the Board maintains offices at New York, Washington, London and Canberra. Information work in the respective countries is done chiefly through these offices. In other countries information is distributed directly from Ottawa in some cases and through diplomatic Missions and Trade Commissioners' offices. The Board's representatives abroad work in close consultation with Canadian diplomatic representatives.

In Canada the Board is chiefly concerned with co-ordinating information of various government departments, and gathering and making this information available, particularly to persons and organizations directly concerned in the dissemination of information to the public.

In addition to the domestic and external branches of the Board there is a Reports Branch which collects and prepares reference material on various aspects of the war undertaking.

The Board provides certain information for members of the Canadian Armed Forces, through publications edited in consultation with the educational authorities of the Forces.

**War-time Regulation of Labour.**—During 1943 and the first half of 1944 the measures for the control of wages and manpower were adapted to changing conditions and in addition a new measure was passed dealing with freedom of association, collective bargaining and industrial disputes. The information on these subjects appearing below brings up to date that in the Labour Chapter.

**Industrial Relations.**—The Wartime Labour Relations Regulations of Feb. 17, 1944, require every employer to negotiate in good faith with any trade union or other bargaining representatives acting for a majority of his employees. In addition, certain "unfair practices" are prohibited, for example, interference by an employer with the affairs of a trade union or other employees' organization, refusal to employ a person because of his membership in a trade union or employees' organization and intimidation of a worker into joining or refraining from joining any trade union or employees' organization.

The Regulations also provide for the appointment by the Minister of Labour of conciliation officers and boards to investigate disputes between employers and workers and to attempt to settle them if possible. The Industrial Disputes Investigation Act, which provided for somewhat similar machinery is suspended, together with the Orders in Council extending its application to war industries. Two other Orders in Council are revoked to the extent that they are inconsistent with the Labour Relations Regulations. One of these permitted the Minister of Labour to

appoint Industrial Disputes Inquiry Commissions to inquire into certain disputes or any other situations considered to be detrimental to the most effective use of labour in the War. It also authorized the Minister to appoint a commission to examine into allegations of discrimination for trade union activity or coercion to join or refrain from joining a trade union and to issue orders to give effect to the commission's recommendations. The other Order in Council prohibited a strike after a board of conciliation and investigation had submitted its report unless in a vote conducted by the Minister a majority of the employees affected voted in favour.

The Government's statement of principles for the regulation of labour conditions during the War (1941 Year Book, p. xxxix) is unaffected by the new Regulations.

*Wages.*—A new War-time Wages Control Order was issued in December, 1943, and was amended in March and May, 1944. Under it a cost-of-living bonus is no longer payable but the bonuses paid under the previous Order have now been incorporated in wage rates. No employer may, without written authorization, change a wage rate or range of rates from that established after the incorporation of the cost-of-living bonus, although he may raise or lower a rate either within the limits of an established range or upon the promotion or demotion of an employee to a new occupational classification for which there is an established rate or range of rates. No special authorization is necessary, moreover, for altering an incentive rate, if the change is made to compensate for a change in the work, provided the labour cost is not increased and the time rate used in conjunction with the incentive rate is not changed. Time rates may be changed to existing incentive rates if the same method of calculation is followed.

Provision is made for increasing rates in order to rectify gross inequalities or gross injustices and a fair and reasonable raise may also be authorized if a cost-of-living bonus and wage increase already granted since August, 1939, have not yielded the full standard bonus. The Order permits employers to raise rates in order to comply with provincial minimum wage rates, provided that any increased rate is not above 35 cents per hour or, if above that figure, was a provincial rate which had been in effect on Nov. 15, 1941.

The Order is administered by a National War Labour Board and nine Regional War Labour Boards. The National Board consists of a chairman and an employers' and employees' representative, each Regional Board of a chairman, in most cases the provincial Minister of Labour and equal numbers of employers' and workers' representatives.

The Fair Wages Policy of the Dominion Government has remained unchanged since 1941 (see 1941 Year Book, p. xl; 1942, p. xxxvii). Its administration, however, is no longer in the hands of the National War Labour Board but has reverted to the Department of Labour.

*Manpower.*—The Government's manpower policy is now largely embodied in two sets of regulations, the National Selective Service Civilian and National Selective Service Mobilization Regulations. Both sets of Regulations, together with some special Orders in Council, are administered under the Minister of Labour by the Director of National Selective Service, who is assisted by an Advisory Board, Associate Directors and regional and local staff. Under the Civilian Regulations, labour turnover has been carefully controlled, certain groups of workers have been directed into more essential work and labour has been combed out of non-essential industries. The Mobilization Regulations require all men between the ages of 18½ and 30 and all single men up to 41 to undertake military service. Further details regarding the manpower policy will be found on p. 695-696.

*Training.*—All training actually in progress or anticipated has been co-ordinated under the Vocational Training Co-ordination Act passed on Aug. 1, 1942. The war emergency training program, now called the "Canadian Vocational Training Program", has been continued under authority of this enactment, and its facilities have been made available for essential civilian as well as war industries. Total enrolments in all types of projects under this program numbered nearly 325,000 up until the end of February, 1944. This included 2,829 persons discharged from the Armed Forces who enrolled for rehabilitation training—an aspect of the program which is expected to increase steadily in importance and for which steps have already been taken to provide additional facilities as they become necessary.

**Department of Pensions and National Health.**—The ordinary peace-time duties of this Department have been turned into war channels to an increasing degree since the outbreak of hostilities. The Pensions Branch of the Department has been largely occupied with the treatment of members and discharged members of the Armed Forces, and with pensions. It has been necessary to construct additional accommodation in all the departmental pensions hospitals; those departmental hospitals previously utilized for immigration and quarantine purposes have been adapted to provide active treatment for members of the Armed Forces or for civilian accommodation in the event of any emergency, and the total bed accommodation has been increased from less than 3,000 to over 8,000. The case of every member of the Forces discharged by reason of medical unfitness is reviewed by the Canadian Pension Commission. The Rehabilitation Branch, under the direction of the Associate Deputy Minister of the Department, has in hand the implementation of the plans for rehabilitation of former members of the Forces engaged in the present conflict. The rehabilitation program already enacted is much more comprehensive than that following the First World War. Because of conditions that were attached to the training program after that War, only 8 p.c. of the Forces benefited by vocational training and assistance in interrupted education. A further 4 p.c. were assisted in settlement upon the land. Thus, only 12 p.c. of the Forces then demobilized benefited by rehabilitation projects and the remaining 88 p.c. were given a war service gratuity. The Post-Discharge Re-establishment Order, with its amendments, enables the Department to furnish vocational training to all members, male and female, of the Forces, who need a skill or a brush-up course. Likewise, anyone who possesses the basic education can be assisted in university training. Social security and free medical treatment are also available for all for twelve months after discharge. All these matters are fully dealt with in Chapter XXI.

Most of the divisions of the Health Branch of the Department have also taken an active part in the war effort. The Division of Industrial Hygiene is specifically authorized to examine and recommend improvement in the working conditions and medical care of personnel in war industries. The work of the Nutrition Services is important in raising the standard of nutrition not only among the Armed Forces but among the general public of Canada, with a view to greater achievement in the war effort. Both of these services have proved most acceptable to industry. The Public Health Engineering Division has found its important peace-time duties of supervision of drinking- and culinary-water supplies and sanitation greatly increased in relation to the movement of troops and the establishment of new training grounds. The Laboratory of Hygiene undertakes, standardizes and controls the manufacture of biological products for use by the Armed Forces; under the supervision of the Kamloops, B.C., Division watch is kept on the rat population on the seaboard as well as the invasion of disease-carrying rodents in various

parts of the western provinces. The vigilance of the Food and Drugs Division is directed towards the maintenance or adjustment of the standards of foodstuffs to meet war-time requirements, particularly with regard to those constituents that came from countries where trade relations are difficult if not impossible. The Quarantine and Sick Mariners' Division now treats members of the Merchant Marine who are taken ill while awaiting convoy, and provides for the institutional retention of those in Canada who are too sick to continue service and who are citizens of countries occupied by the enemy.

**Agricultural Supplies Board.**—The Agricultural Supplies Board is a war-time control body operating under the Department of Agriculture. It is the responsibility of the Board to ensure that Canadian agriculture is conducted during war-time in a manner to fulfil so far as possible the needs of Canada, the United Kingdom and the Allied Nations for food and other agricultural products. Combined with this, of course, is the responsibility of ensuring that the supplies needed for agricultural production in Canada, such as seeds, fertilizers, feeds, etc., are made available in sufficient quantity. In accomplishing its duties, the Board works in close co-operation with the Provincial Departments of Agriculture, most of whom have, in turn, provincial production committees working with field officers and directly with the farmers. The work of the Board in the early years of the War is outlined in previous issues of the Year Book and the present review brings that material up to date.

The increased tempo of the War abroad combined with full employment and increased payrolls at home caused a marked increase in the demand for agricultural commodities and for a much wider range of products. By the summer of 1942 instead of surpluses of a number of products threatening to accumulate, the necessity of restricting consumption became evident in some instances. From time to time as these changes in the food position developed, the Government, through the Board, took steps to deal with the situation. As requests came from the United Kingdom for an increased volume of first one product and then another, plans were made to encourage Canadian output. Frequent conferences to form programs were held with provincial government officials and with representatives of farm organizations. In view of this changing picture of food requirements, it was considered advisable in the late summer of 1942 to analyse the entire productive position and to plan for the output needed in 1943. A central committee, representative of all interested Government Departments and Boards undertook this work and in December, 1942 a conference was held at Ottawa, attended by representatives of all Provincial Departments of Agriculture, delegates of the Canadian Federation of Agriculture and editors of Canadian farm papers, to reach an agreement on agricultural production objectives for each province in order that the overall need for the Dominion as a whole might be achieved. This conference, the tenth held with provincial agricultural representatives since the outbreak of war, marked the first occasion on which it was possible to present with confidence, definite requirements for almost every kind of agricultural product four months or more before seeding time. While all these suggested objectives were not entirely achieved during 1943, largely because of a shortage of farm labour and equipment, the plan undoubtedly directed production into the farm enterprises most urgently needed for war-time purposes. A similar conference was held in December, 1943, to plan the farm program for 1944.

**Assistance to Agriculture.**—The need continued for the movement of large quantities of western feed grains to Eastern Canada and British Columbia for livestock feeding and the freight assistance policy was extended indefinitely. Rail

transportation was particularly difficult in the severe winter of 1942-43 and two plans were authorized in the early summer of 1943 directed towards bringing feed grain from Western Canada in the summer and autumn months.

Some measure of assistance was continued to enable farmers to obtain fertilizers at lower prices and a plan of zoning the fertilizer industry did much to reduce the price to the farmer. The general object of the fertilizer program since the outbreak of war has been to increase the available supply and to direct its use to essential food crops and to the feed crops which are so necessary in increasing the supply of meats, dairy and poultry products urgently needed in the war effort.

The Board has continued its activities in supervising and assisting in the equipping of plants engaged in the dehydrating of vegetables for Great Britain and the Canadian Armed Forces. Nearly 900 tons, dried weight, of vegetables, including potatoes, cabbage, carrots, onions and turnips, were dehydrated from the 1942 crop and the quantity from the 1943 vegetable crop will be considerably larger.

Assistance was continued to the apple growers of Nova Scotia and British Columbia in 1943 to offset the serious loss of the overseas market since the outbreak of war. Fortunately Great Britain was able to take comparatively large quantities of both fresh and dried apples from the 1943 crop which enabled the crop to be disposed of to better advantage than in previous war years.

In co-operation with the Fats and Oils Administration, the Board encouraged the production of rape and sunflower seed. The oil from rape seed is a valuable lubricant used extensively in naval vessels, while the sunflower provides an excellent edible oil.

In 1943 the Board sponsored a war-time garden campaign. It was realized that the extra vegetables which would be grown in the home garden would not affect the commercial or market gardener but would, on the contrary, supplement the overall supply and help in some measure to relieve transportation of bulky vegetables. Reports indicate the campaign was most successful and it is estimated that 57,500 tons of vegetables were grown in 209,200 war-time gardens in Canadian cities and towns with a population of 1,000 or more.

The Board, through its Technical Advisor, continued its activities in reviewing priorities received by the Department of Munitions and Supply for new building construction in the agricultural industry and for priorities for new machinery for agricultural processing. Close contact was also kept with the office of the Administrator of Farm Machinery.

The increasing requirements in the domestic market and the interrelation of agricultural supplies with the Government price-fixing policy necessitated close collaboration with the Food Administration of the Wartime Prices and Trade Board.

**Agricultural Food Board.**—In March, 1943, the Agricultural Food Board was established. In co-operation with the Agricultural Supplies Board, the Agricultural Food Board assists in the development of programs of the Department of Agriculture for the war-time production of food. Among its other duties, the Board is responsible for the payment of subsidies which may be necessary to assure the required production of essential foods. The necessary production must be assessed in the light of commitments for Great Britain and of the requirements for Canada and the Allied Nations. During 1943 it became necessary to subsidize fluid milk, butter fat and milk used for cheese and concentrated products, certain vegetables used for canning and fruit used in the manufacture of jam.

**Commodity Boards.**—Working in close collaboration with the Agricultural Supplies Board and the Agricultural Food Board are three commodity boards, which procure and forward Canadian farm products contracted for under agreements with other governments. The Meat Board (previously the Bacon Board) acts as the agency which implements the agreements with the British Ministry of Food for bacon and other meat products. The Dairy Products Board acts in a similar capacity with respect to Canadian cheddar cheese needed by the United Kingdom and takes such measures as will ensure needed supplies of other dairy products for overseas and for Canadian markets. The Special Products Board is responsible for supplying Canadian farm products (other than meat and dairy products) such as eggs, fruit, vegetable products, flax fibre and seed to the United Kingdom or any Allied country.

**The Dominion Bureau of Statistics.**—The great and many-sided expansion of Canadian statistics in numerous fields during the past twenty years, and the work that the Dominion Bureau of Statistics has done to provide a statistical background for economic study, have greatly facilitated the conversion from a peace economy to a war economy. Far more is known about production, internal trade, prices, the balance of international payments, etc., than during 1914-18, and this knowledge has been extensively used by the Government.

*Co-operation with the Wartime Prices and Trade Board.*—After the creation of the Wartime Prices and Trade Board the Chief of the then Internal Trade Branch, afterwards the Assistant Dominion Statistician, was seconded thereto to act as liaison officer between the Board and the Bureau. A number of statistical undertakings were carried out, the staff being supplied by the Board but organized by the Bureau. Statistics on coal were collected and compiled for the Coal Administrator. (At a later date the same work was carried on for the Department of Munitions and Supply.) At the request of the Hides and Leather Administrator a monthly series of statistics of hides, skins, and leather was instituted. The work on prices was expanded considerably, particularly as regards cost-of-living statistics, and extensive price records furnished regularly to the Board.

Under the Wartime Prices and Trade Board order to license persons and firms selling or buying for resale, commodities and specified services, the Bureau developed a Records Division for this work. Over 330,000 businesses were licensed and coded by kind of business. A complete classification was set up which served as a basis for sending out orders, bulletins, posters, circulars, etc., for the Board. This organization was completed under the direction of what is now the Merchandising Statistics Branch of the Bureau. After it had been thoroughly established on a routine basis it was taken over for direct administration by the Wartime Prices and Trade Board.

*Co-operation with the Foreign Exchange Control Board and Other Departments.*—The work of the International Payments Branch has been closely co-ordinated with other Government departments to meet the increased official demands for balance of payments information with respect to both past record and future outlook. The complexity of the economic and financial organization of the Dominion during the War has created new requirements for statistical information with the necessity of frequent reviews of the balance of payments situation.

To make effective use of information produced by administrative controls, four officers of the staff of the International Payments Branch are working on the premises of the Foreign Exchange Control Board. Information produced from this and other official sources is co-ordinated for balance of payments purposes with statistics collected directly by the Dominion Bureau of Statistics.

*Co-operation with the Unemployment Insurance Commission and the Department of Labour.*—The Social Analysis and Economic Research Division of the Bureau of Statistics was detailed to collect, compile and tabulate statistics arising from the operations of the Unemployment Insurance Commission. The annual registration for 1942 was planned to yield additional data necessary for a "manpower inventory". This was designed to provide basic information necessary for the optimum utilization of Canada's manpower. In April, 1942, the registration form was completed for all persons (whether insured or not) actively engaged in any firm employing insured personnel. A supplementary order of the Director of National Selective Service has also required a registration of unemployed male persons. These manpower records have been compiled by the Bureau of Statistics; they cover more than three million persons and such information as age, conjugal status, occupation, additional skills, industry and other pertinent data that will enable each to be placed in a position where he can contribute most to the national effort. In handling this work there has been the closest co-operation between the Bureau and the Manpower Records Branch of the Department of Labour.

*Post-Censal Estimates of Civilian Population.*—In co-operation with the Wartime Prices and Trade Board the surrender cards from ration books have been made available to the Dominion Bureau of Statistics to provide data from which post-censal estimates of population can be estimated. By this means also an estimate can be made respecting war-time shifts of population within the Dominion.

A method was devised for counting the surrender cards from Ration Book No. 2, and the supervision of the work was carried out by the Social Analysis Branch. Data were obtained respecting the population of Canada by provinces as of August, 1943. This information was used in the calculation of post-censal estimates of population. The procedure was further developed for a count by Census Districts and Counties of Ration Book No. 4. This provided additional data respecting the number and location of the Canadian population as of March, 1944.

*The National Research Council.*—The National Research Council is serving as a central co-ordinating body directing scientific research in Canada. This work is being carried on not only within its own laboratories but in the universities and in industry; the combined effort is at present being directed to the solution of new and urgent problems arising out of the War. The Council has been appointed the official research station of the Navy, Army and Air Force in Canada. Close co-operation between Service personnel and research staff has been a large factor in the successful application of science to the solution of military problems. Continued co-operation of all research workers in Canada on the firm basis established during the War will likewise be a powerful factor in the solution of the many and varied problems that will confront the Dominion in the post-war era.

The Council's work is planned along two main lines; the conduct of fundamental and applied research, including essential test work in the National Research Laboratories at Ottawa, and the promotion, co-ordination and support of research in other centres throughout the Dominion by grants in aid, award of scholarships, and the direction of research investigations under the guidance of committees of specialists appointed by the Council.

The Council derives its funds largely from a parliamentary appropriation. Supplementary revenues come through contributions from industry for special work, fees for other services, income from trust funds, royalties and sale of patents.

Effective liaison has been maintained in scientific work going on in Great Britain, Canada, the other Dominions and the United States. Scientific problems referred to the Council in connection with the activities of the Armed Forces are studied jointly by officers from Defence Headquarters and civilian personnel on the Council staff. The National Research Council maintains civilian scientific groups at several points across Canada and groups on both the Atlantic and Pacific coasts work in close co-operation with Naval Stations. Many of the problems presented relate to the supply of materials and the preparation of specifications. Highly technical problems have arisen from anti-submarine warfare and minesweeping operations, air activities and on the direction of gun fire. Research and development in optical instruments, photography, spectrochemical analysis and geometrical optics have been carried on continuously and with good effect. Radium and X-rays have been used in routine tests chiefly for the detection of flaws in metals. Studies have been made in the development of superior flying machines and in working out all possible safeguards for the flying personnel who use them. Food studies have included work on preservation, transportation, packaging and dehydration.

Some forty active committees are now working under the Council's auspices and directing research in many fields. One of the principal groups of committees deals with the planning and direction of medical research both for civilians and for the Armed Services.

Continuing the practice of providing assistance to post-graduate research students in science, the Council awarded nine fellowships of \$750, thirty studentships of \$600 and eighteen bursaries of \$250 each for the fiscal year 1944-45.

Under the plan of assisted researches carried on since the Council was established, nineteen grants were made in 1944-45.

**Other Agencies and Activities.**—There are various other special agencies performing important economic functions, either of control or investigation. The problems of co-ordination, both internal and international, in the field of export policy have become more important because of the growing scarcity of essential materials. A Food Requirements Committee was established in October, 1944 for the purpose of studying both domestic and external demands on Canadian food production and recommending appropriate policies of supplying Canadian foodstuffs to other nations. In May, 1943, a National Textiles and Leather Requirements Committee was set up to allocate the available supplies of textiles and leather for the use of the Armed Forces, civilian population, war and civilian industry and essential exports.

In order to have an agency for prompt consultation among the various Departments and other agencies of government on the matter of export and import trade policy, establishment of an External Trade Advisory Committee was announced on May 4, 1944. This committee will investigate and make recommendations on matters relating to war-time export and import trade or trade in a transition period and concerning Canada's supplying of goods and services for relief and rehabilitation.

In January, 1944, the Canadian Export Board was established to act as Canadian Government export and procurement agent for civilian goods for certain countries, especially some of the British colonies, where emergency war-time trade control measures have prevented normal trade practice from being followed.

Shipping policy is also under close review by the Government. The Canadian Shipping Board, set up in July, 1942 (see pp. 569-571), controls the use of both lake and ocean ships of Canadian Registry. In allocating ships to particular routes and

seeing that essential cargoes are carried, it co-operates with the United Kingdom Ministry of War Transport and the United States Maritime Commission. The Shipping Priorities Committee determines the degree of urgency or priority of the various shipping requirements, gives direction to the Shipping Board and forwards necessary requests for the use of United Kingdom and United States ships.

An Advisory Committee on Merchant Shipping Policy was established in September, 1943, to report on the merchant shipping policy and, in particular, the present manning of merchant ships, disposition of ships after the War, post-war size and composition of the Canadian merchant marine, and the type of permanent machinery required to carry out the post-war shipping policy.

An Advisory Committee on Economic Policy, consisting of senior officials of various Departments and agencies of government, was established in September, 1939, to investigate, report and advise on questions of economic and financial policy and organization arising out of Canada's participation in the War. During the autumn of 1943 it took over the functions of the Advisory Committee on Reconstruction which presented its detailed report to the Government in September. The planning and organizing of investigation and study of post-war problems by Departments and agencies of government now rest with the Advisory Committee on Economic Policy (see Chapter XXI).

Between Canada and the United States a number of joint committees are functioning. To act as liaison between the various agencies, the Joint Economic Committees were set up in 1941 with an over-riding responsibility to investigate and report on joint war-time economic problems not being currently studied by other agencies, as well as on problems of post-war adjustment. The development of other agencies of co-ordination made the continued operation of these committees unnecessary, and they were dissolved in March, 1944.

It is significant that the new agencies set up during the past two years have been established not only to deal with the war-time situation, but also to establish some machinery to deal with the problems that will arise after the War, especially in connection with the transition period between war and peace.

Questions of post-war traffic have come to the fore during the past year. An Interdepartmental Committee on Air Transport Policy was set up in June, 1943, to consider and advise on all matters having a direct bearing on Canada's international air-transport policy and all matters of domestic aviation policy affecting more than one Department of Government. This Committee worked on recommendations leading to a draft international air-transport convention presented by Canada as a basis for bilateral air talks between the United Kingdom and the United States; also to the establishment of an Air Transport Board, proposed to Parliament by the Government during the 1944 session. This Board will function as a regulatory and advisory body, to regulate civil aviation and advise the Government in laying out Canadian-operated routes within Canada and overseas.

To make a thorough investigation of Canada's health services for present and future needs, the Canadian Medical Procurement and Assignment Board was established in July, 1942. Its primary function was to determine the number of medical personnel available to the Armed Forces and at the same time to try to preserve adequate medical service for civilians. The complete survey of the medical, dental and nursing professions and present hospital and health facilities was tabled in March, 1944.

## Section 2.—Economic Developments in Canada Since the Beginning of 1943\*

When the history of the War has been written, Canada's economic contribution to the cause of the United Nations will be an outstanding feature. The Armed Forces of the United Nations fighting in many parts of the world have been furnished with much-needed munitions and war supplies by Canadian factories. The importance of this enormous flow of the tools of war has been heightened by the extraordinary demands of mechanized warfare which characterize the present struggle.

The problems imposed by the War have become increasingly important until to-day they dominate the Canadian economy. The achievement of Canada during the current period, on evidence that is accumulating from day to day, shows conclusively that the economic activities of the country have surpassed anything that would have been thought possible in pre-war days. The major barometers of economic well-being have all averaged higher than in any other period of Canadian history. Business operations in 1943 recorded a continuance of the upward trend although the pace slackened in comparison with the rapid advance of 1942.

The marked increase in the national income since the pre-war period has been to some extent a result of the higher prices of war-time but after making full allowance for this factor, the accomplishment during 1943 remains an epoch-making achievement, especially considering the fact that the three-quarters of a million of the adult population who have been absorbed into the Armed Forces were withdrawn from productive operations in the ordinary sense of the term. Canadian production has been tied in closely with that of the United Nations and constant consultation enables standardization to be carried to previously unprecedented lengths. Despite this invaluable co-operation, however, two main problems have confronted authorities in keeping production at the required levels. The first is that of maintaining the labour supply in view of the needs of the Armed Forces: here women have applied themselves to war-time tasks and helped immeasurably. The second problem is related to the shortage of raw materials and equipment that has retarded industrial operations. Under the following headings developments in the more important branches of the national economy are brought up to date.

**Agriculture.**—Among the non-wage-earners of Canada the farmers constitute a class whose effort toward the supplying of the food needs of the United Nations has been well directed and splendidly fulfilled (see pp. 195-201). At the beginning of 1943, Canadian farmers were asked to increase their production of most foodstuffs, wheat being an exception. Continued expansion of domestic requirements in addition to substantial commitments to the United Kingdom and other United Nations meant that there was little likelihood of surplus production for any type of food. In attempting to meet these demands farmers found themselves short of manpower and equipment and as the season progressed weather conditions were far from favourable in many areas. Despite this handicap, however, the results achieved were remarkable and in most cases production objectives were reached. The unprecedented crops of 1942 contributed greatly in solving the feeding problems of the war-time period.

**Minerals.**—Mineral production has been affected in the current period by the shortage of labour and other difficulties arising from war conditions. The output was valued at \$524,400,000 in 1943 compared with \$566,800,000 in the preceding year. The falling off, however, was entirely accounted for by the drop of nearly

\* Prepared by Sydney B. Smith, M.A., Chief, Business Statistics Branch, Dominion Bureau of Statistics.

\$46,000,000 in the output of gold, while the value of the production of copper, nickel, lead and zinc, the metals chiefly required for war, showed a substantial increase.

Mining companies have gone far toward satisfying the war demand for base metals which has reached an extraordinarily high level. Only bare minimum supplies of copper, aluminum, nickel and zinc were retained for essential civilian use and the immense quantities produced in Canada were shipped mostly to munition factories of the United Nations. The Canadian output of aluminum supplied 40 p.c. of the war requirements of the Allies. Canada produced about 95 p.c. of the total nickel output of the United Nations, 20 p.c. each of the zinc and the mercury required, 15 p.c. of the lead and 12 p.c. of the copper.

**Electric Power.**—Electric power production reached new high levels during the period under review. New hydro-electric power installations during 1943 totalled about 1,000,000 h.p. bringing Canada's total hydro development to 10,000,000 h.p. The expansion contributed to the successful efforts of hydro-electric industry in meeting the ever-increasing demands for power. Monthly figures of the output of central electric stations indicated that a new record for generation of electricity—more than 40,000,000,000 kwh.—was reached during the year. Although the installation of hydro-electric plants was great, it still left more than 80 p.c. of Canadian water-power resources available for future development.

**Forestry.**—The output of the war requirements of forest products, despite the shortage of manpower, was well maintained in 1943, especially in connection with the construction of aircraft. Newsprint production was about 6 p.c. less at 2,983,000 tons. Newsprint was the first major industry to be concentrated on a continental basis as a result of the joint efforts of Canada and the United States. The move was aimed to facilitate control in allocating tonnage among the various producers. A shortage of newsprint was forecast in view of the plan to restrict production for the conservation of power and to release men for the Armed Forces and the lumber industry. Costs of materials, labour and transportation were greatly in excess of pre-war years, although price control and rationing were a decided help toward keeping costs within bounds.

**Manufactures.**—The achievement of secondary production to meet the needs of war were spectacular and the transfer to a total war economy has been practically completed. The large objectives of war supplies poured from Canadian factories and requirements set for the fourth year of hostilities were reached. It was remarkable that every piece of equipment for which orders had been received in the first three years of war was delivered, and new production levels have been reached in each succeeding year. The war program had at the end of 1933 reached a point where an appraisal was made to decide whether, in the light of present conditions abroad, some important contracts could be reduced or cancelled and thus afford an opportunity for the production of badly needed civilian supplies. Also during 1943-44 revisions have had to be made to meet the needs of the changing pattern of warfare.

**Construction.**—The construction industry was hampered through lack of supplies to meet the need of workers in communities adjacent to expanded industries. When peace comes and war-time restrictions have been removed, there will doubtless materialize a backlog of requirements which will augur well for the post-war period. The new business obtained by the construction industry, as measured by the statistics of contracts awarded and building permits issued, recorded a marked decline in 1943. Revival was shown in the first four months of 1944, the gain in contracts over the same period of 1943 being no less than 44 p.c.

**Transportation.**—The lesson of past wars and the experience of the present have emphasized that transportation is the life-line of a country at war and it is well to remember that the existence of our extensive transportation services has made it possible for Canada to take so prominent a place in supplying a large share of armaments, munitions, food and other supplies. But Canada's railway facilities have been heavily taxed by the expansion of industrial output: the movement of freight was 65 p.c. greater in 1943 than in 1939. The railways have had to take care not only of the enormous increase in their usual business but have taken the place of other transportation agencies which the circumstances of the times have forced into the discard. Many vessels on inland waters have been requisitioned for ocean-going transportation. The shortage of gasoline has limited highway transport and governmental policy during the War has brought excellent results and achieved a maximum of co-operation and co-ordination.

**Employment and Earnings.**—The great productive achievement of Canada during 1943 was based upon augmented employment and upon the increased efficiency of the workers. Notwithstanding the absorption of more than 200,000 adults into the Armed Forces during 1943, the average working staffs of some 14,500 large employers of labour presenting monthly reports to the Bureau increased from 1,802,000 in 1942 to 1,912,000 in 1943, and reached the maximum of 1,982,000 at the first of December. The increase during 1943 was due mainly to the larger number of women called into productive work to take the places of the men who were enrolled for Active Service. The estimated payrolls of the reported employees in 1943 were \$3,063,000,000 as compared with \$2,685,000,000 in 1942, an increase of \$378,000,000 or 14 p.c. In December, the current weekly payrolls of these employers were at the rate of \$3,250,000,000 per annum. It is obvious from the statistics that with full employment, controlled prices of the necessities of life and greater average earnings, the position of the average wage-earner in the current period is the most favourable in history.

**Internal Trade.**—Although the production of many lines of consumer goods has been restricted and the Canadian people are making heavy contributions in the purchase of war bonds and taxation payments, the trend in retail trade is still in an upward direction. The estimate of more than \$4,000,000,000 for 1943 is far in advance of any other period in the records of the Dominion.

The dollar value has increased because of higher prices as well as the advance in the quantity of goods purchased. The index of retail prices averaged 124.5 in 1943 against 101.0 in 1939. The production of many classes of consumers' durable goods, chiefly passenger cars and household utilities, was practically discontinued for the time, although the regulations were modified in connection with the latter.

Salaries and wages rose sharply since the beginning of the War and investment income was much more than maintained and even after the payment of direct taxes, the income at the disposal of individuals was probably at a historical maximum in 1943. The disposable income rose to an exceedingly high level and consequently the pressure on the price ceiling is readily understood. The difficulty in preventing inflation is the advancing income of the average Canadian in conjunction with the increasing scarcity of consumer goods.

**External Trade.**—The record output of industry has been reflected in export trade which, in 1943, reached the remarkable total of just over \$3,000,000,000 not including net exports of non-monetary gold amounting to \$142,000,000. As compared with this, imports amounted to \$1,735,000,000, leaving an active

balance of trade of more than \$1,400,000,000. While it is true that a large proportion of this was represented by the gift to the United Nations, it is nevertheless a fact that the surplus of exports over imports was an amazing achievement. The exports of commodities and new gold were at the rate of more than \$250,000,000 per month or \$10,000,000 per working day, an amount indicative of the tremendous current production of Canada under the strain and stress of war. It is estimated that more than 70 p.c. of these exports of merchandise were used directly in the carrying on of the War and were sent wherever they would best serve the cause of the United Nations. Exports of motor-vehicles and parts reached in 1943 the enormous value of \$503,000,000, cartridges and shells \$354,000,000, non-ferrous metals and their products \$333,000,000, guns \$144,000,000, ships \$83,000,000, Canadian army and navy stores \$49,000,000, aircraft and parts \$145,000,000, explosives and other chemicals and their products \$86,000,000.

The winning of the battle of the Atlantic and the marked expansion in ship-building relieved a critical transportation problem. After deducting exports to the United States, it is evident that more than \$1,800,000,000 of Canadian products were sent overseas during the calendar year, an amount far surpassing all previous records.

Canadian exports exceeded \$1,000,000,000 in the first four months of 1944: all previous records were out-distanced. The commodities sent abroad in the same period of the preceding year amounted to \$778,000,000.

Again, a large proportion of the outward shipments were for the United Nations for war purposes including the building of reserve stocks for the impending Invasion. Munitions, rolling-stock and food were the important components, but the general trend of normal commerce continued to expand. Heavy shipments went to the Mediterranean theatre of war, particularly to Italy, the amount having been \$50,000,000. Although most of the deliveries consisted of war materials for the troops, a large proportion was for the rehabilitation of southern Italy restored to the Italian people by the Allied Powers. This is a harbinger for other European countries when liberated from the aggressor. The four months' exports were about evenly divided between Empire and other Allied Nations. Shipments to the United Kingdom at \$385,000,000 showed an increase of \$136,000,000 over the same period of the preceding year. Exports to Russia recorded a notable gain at \$24,000,000 or \$20,000,000 more than one year ago. Other important outlets included India and Egypt at about \$40,000,000 each.

**Banking and Finance.**—Cheques cashed by the chartered banks against individual accounts amounted to \$53,797,000,000 compared with \$45,526,000,000 in 1942. The gain of 18·2 p.c. reflected the expansion in economic activity and the somewhat higher level of wholesale prices. Heavier payments arising from Dominion Government financing was also an important factor in the increase in bank debits during the year. The amount of cheques cashed in 1943 was greater than in any other year in Canadian history. The preceding maximum was reached in 1929 when a heavy volume of speculative trading had an important influence.

The prevailing well-being of the Canadian people is also clearly indicated by the buoyancy of the revenues of the Dominion Government. In the first eleven months of the past fiscal year, total revenue receipts amounted to the enormous sum of \$2,470,000,000 against \$2,016,000,000 in the same period of the preceding fiscal year.

The Dominion Government endeavoured to hold an even balance between taxation and borrowing. The taxation levy was made subject to definite national policy. The annual cash requirements of the Government were more than ten times as great as in the pre-war period. Ten times the revenue from individual incomes has been secured by greatly increased tax rates and a drastic lowering of exemptions. Marked increase in corporation taxes was accomplished by an increase in the basic corporation rate but the more prolific source of revenue was by the imposition of the excess profits tax.

The financial plan of the Government had a double purpose. The public were asked to make loans in the form of bonds in order to defray, in part, the cost of the War, but they were also induced to loan a large proportion of their cash resources so that there would be less unnecessary spending. The economic life of the country was built around these two basic policies, and this enabled the Government to stave off the pressure upon the price ceiling. In other words the object was to cut down civilian spending which was in competition with war requirements, while at the same time the Government was borrowing from the savings of the people in order to reduce civilian consumption. Funds that would have gone into retail and service markets were directed to Government war use. Needless to say a heavier burden has fallen, as a consequence, upon the lower income brackets.

The net debt of the Dominion Government rose from \$3,100,000,000 in March, 1939, to \$6,300,000,000 in March, 1943. The estimate as of March, 1944, as given by the Minister of Finance in the Budget Speech of June 26, was \$8,842,000,000. The war effort which the figures represented was as varied as was the diversity of the natural resources of the Dominion. It was a race against time during which there was an unprecedented expansion of industry, business and finance.

---

In the plan of reconstruction, it is generally recognized that external trade must occupy an outstanding position and co-operation in respect to post-war trade among the United Nations is essential. The principle of mutual aid and the good-neighbour policy, applied so effectively in war-time, point the way and plans are now being laid to enable Canada to take her traditional place as a leading trading nation in the post-war world.

INDEX NUMBERS

# *ERRATA*

- p. 235, Table 24—Total 1942 milk and cream consumption for Quebec should read 1,115,541,000 pt. instead of 115,541,000 pt.
- p. 280, Table 2—Total for 1942 should read \$75,116,933 instead of \$75,072,779.
- p. 372, Table 7—Index number for all manufactures for 1929 should read 101.4 instead of 104.4.
- p. 411—Last line of first paragraph should read "establishments having 500 or more persons" instead of "300 or more".
- p. 524—Last line of paragraph 6 should read May, 1944, instead of May, 1940.
- p. 675, Table 8—Allocations in force, 1941, for Quebec should read 7201 instead of 918.

## PART I.—GEOGRAPHICAL FEATURES\*

NOTE.—It is necessary to devote all available space in current editions of the Year Book to the important economic changes and controls that have marked the transition from a peace-time to a war-time economy and the standard material that has appeared in this chapter has therefore been substantially cut down. Adequate references are given, however, to where the said data can be found.

The Dominion of Canada comprises the whole northern part of the North American Continent with its islands, except the United States territory of Alaska and the territory of Newfoundland (with Labrador). It takes in the whole Arctic Archipelago between Davis Strait and the connecting waters northward to the 60th Meridian on the east and the 141st Meridian on the west.

The Dominion is bounded on the west by the Pacific Ocean and Alaska; on the south by the United States; on the east by the Atlantic Ocean, the waters between Newfoundland and the Gulf of St. Lawrence, Labrador, Davis Strait and the dividing waters between the Danish territory of Greenland and Ellesmere Island; northward it extends to the North Pole.

The southernmost point is Middle Island in Lake Erie, in north latitude 41° 41'. From east to west Canada extends from about west longitude 57° at Belle Isle Strait to west longitude 141°, the boundary of Alaska. Canadian territory thus extends over 48° of latitude and 84° of longitude.

**Area.**—The area of the Dominion is 3,695,189 square miles, a figure that may be compared with that of 3,735,209 square miles for the United States and its dependent territories; 3,776,700 the total area of Europe; 2,974,514 the area of Australia; 3,275,510 the area of Brazil; 1,581,079 the area of India (excluding Burma); 120,849 the area of the British Isles. Canada's area is over 28 p.c. of the total area of the British Empire, as it is shown at p. 165 of the 1934-35 Year Book. (See also p. 141 of this volume.)

<sup>1</sup> Salt-water areas are excluded.

<sup>2</sup> Too small to be enumerated.

**Political Subdivisions.**—Politically, Canada is divided into nine Provinces and two Territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act (see pp. 40-60 of the 1942 Year Book) and, as new provinces have been organized from the Dominion lands of the Northwest, they have been granted a political status equivalent to that of the original provinces. Yukon and the Northwest Territories with their boundaries of to-day are administered by the Dominion Government. The characteristics of each of the Provinces and of the Territories are reviewed below.

*Prince Edward Island.*—This, the smallest province of the Dominion, is about 120 miles in length, with an average width of 20 miles and has an area of 2,184 square miles. It lies just off the coast east of New Brunswick and north of Nova Scotia and is separated from both provinces by Northumberland Strait from 10 to 25 miles wide.

The Island is almost trisected by the deep indentations of Malpeque Bay, north of the town of Summerside, and by the mouth of the Hillsborough River at Charlottetown, which nearly meets Tracadie Bay on the north side. Its rich, red soil and red sandstone formations are distinctive features, and no point on the Island attains a greater altitude than about 450 feet above sea-level. Its climate, tempered by the surrounding waters of the Gulf of St. Lawrence and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The Province is noted for its relative predominance in the fox-farming industry, its lobster canneries, its oyster beds, and its production of seed potatoes.

*Nova Scotia.*—The Province of Nova Scotia is 381 miles in length by 50 to 105 miles in width and has an area of about 21,068 square miles (see Table 1), somewhat larger than that of the Irish Free State. The mainland is connected with the Province of New Brunswick by the Isthmus of Chignecto; the Island of Cape Breton forms the northeast portion. The latter is separated from the mainland by the narrow Strait of Canso and includes the famous salt-water lakes of Bras d'Or.

Nova Scotia leads the provinces in the production of coal. The coal-fields are bituminous, of good quality, well adapted to the production of coke and excellent for domestic use and for steam-raising purposes. The chief coal-fields are at Sydney and Inverness on Cape Breton Island, and at Pictou and Cumberland on the mainland.

On the Atlantic side, the mainland is generally rocky and open to the sweep of Atlantic storms; it is deeply indented and has numerous harbours providing safety for the large fishing fleets that support the extensive fishing industry of the Province (see Chapter XI). The slopes facing the Bay of Fundy and the Gulf of St. Lawrence are sheltered from the Atlantic by low mountainous ridges not exceeding an altitude of 1,500 feet and running through the centre of the Province. In striking contrast to the Atlantic side, they present fertile plains and river valleys especially adapted by climate and situation to the growth of apples, pears and other fruits.

*New Brunswick.*—New Brunswick is nearly rectangular in shape and may be compared in size to Scotland with an area of 30,405 square miles (for area of Province see Table 1). The Bay of Chaleur at the north, the Gulf of St. Lawrence and Northumberland Strait at the east, the Bay of Fundy at the south, and Passamaquoddy Bay at the southwest, provide the Province with a very extensive seacoast. It adjoins the State of Maine on the west and the Province of Quebec on the north and northwest.

The conformation of New Brunswick is, in general, undulating but to the east it attains its highest elevation of 2,690 feet in the vicinity of Grand Falls on the St. John River. In the northeastern half of the Province there are extensive areas of Crown lands carrying valuable stands of merchantable timber. Numerous rivers provide access to the extensive lumbering areas and to attractive hunting and fishing resources. The Province is watered to the west and south by the River St. John which in its course of 400 miles runs through country famed for its distinctive beauty.

While the forest resources are of first importance economically, large areas of rich agricultural land are found in the numerous river valleys, especially that of the lower St. John, and in the broad plains near the coast. Natural gas and petroleum are obtained in limited quantities and coal mining on a moderate scale is carried on in the Minto Basin at the head of Grand Lake.

*Quebec.*—Quebec is the largest province of the Dominion and occupies the area of British North America east of Hudson Bay, with the exception of the Maritime Provinces and Newfoundland (including the coast of Labrador). It has an area (see Table 1) of about 595,000 square miles, equal to the combined areas of France, Germany and Spain, but a large part of the surface is made up of Precambrian rocks of the Canadian Shield, which renders it unsuitable for agriculture. The Gulf of St. Lawrence and the River St. Lawrence penetrate across the entire width of Quebec and divide the Eastern Townships and the Gaspé Peninsula to the south from the larger area of the Province to the north. North of the St. Lawrence the land takes the form of a ridge parallel to the river and rises from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet from which it descends gently to sea-level at Hudson Bay and Hudson Strait.

With the exception of the treeless zone, extending north of latitude 58°, most of the Province supports a valuable tree growth varying from the mixed forests in the southwest to the coniferous forests in the east and north. In addition to extensive timber limits, which form the basis of a great pulp and paper industry, Quebec is

the foremost of Canadian provinces in the development of hydro-electric power (see Chapters IX and XIII) and has available water-power resources almost equal to those of Ontario and Manitoba combined. Its asbestos deposits have long been known for their quality and extent and promise to become still more important as a possible source of magnesium as a by-product. Relatively recently, extensive developments of gold and copper in the western part of the Province have taken place and the mineralized area is being extended year by year. Quebec is in third place in mineral production among the provinces of the Dominion (see Chapter XII). Its fisheries in the St. Lawrence River and Gulf are an important resource. The climate and soil of the upper St. Lawrence Valley and of the Eastern Townships are well suited to general farming operations, including dairying and the production of vegetables on a commercial basis.

*Ontario.*—Lying between Quebec on the east and Manitoba on the west, Ontario is usually regarded as an inland province but its southern boundary has a fresh-water shoreline on the Great Lakes of 2,362 miles while its northern limits have a salt-water shoreline of 680 miles on Hudson and James Bays. There is a tidal port at Moosonee at the southern end of James Bay. The most southerly point in the Province is Middle Island at  $41^{\circ} 41' N.$  latitude (this is also the most southerly point in the Dominion) and the most northerly latitude of the Province is  $56^{\circ} 50'$ .

As in Quebec, the surface of Ontario follows the conformation characteristic of the Precambrian Shield except in the Ontario Peninsula where the surface is low and level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of Lake Superior. Northwest from the Height of Land, the slope descends very gently to Hudson Bay where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea-level.

Mining is a very important industry in the wide-spread Precambrian area; as in the adjoining Province of Quebec, Ontario, although lacking in native coal, is rich in other minerals and contributes 50 p.c. of the total mineral production of the Dominion. Gold, silver, nickel, copper, radium, zinc, magnesium dolomite and gypsum are mined commercially. Petroleum, natural gas and salt are also produced on an important scale in the Ontario Peninsula (see Chapter XII).

The geographic position of Ontario, on the Great Lakes waterways system, permits coal to be economically transported from Pennsylvania and iron ore from Minnesota to provide the basis of a large iron and steel industry. A discovery of rich iron ore is now under development in the Steep Rock district west of Port Arthur. An abundance of natural resources has made Ontario the foremost industrial province (see Chapter XIV).

Possessed of excellent soil and a wide variety of climate, general farming is carried on extensively. In the Niagara Belt fruit farming has been scientifically cultivated and is a highly specialized industry throughout the Ontario Peninsula.

Vast forest resources in proximity to hydro power (see Chapter IX) are the basis of large wood-using industries and the forests of the north are a rich fur preserve.

*Manitoba.*—Manitoba is roughly the size of France and is the most central of the provinces (see map facing p. vi). Together with the Provinces of Saskatchewan and Alberta it constitutes the famous Prairie Belt or Interior Plain section of the Dominion—world renowned for the quality of its wheat.

The Province has a considerable area of prairie land but is also a land of wide diversity combining 400 miles of sea-coast (on a rocky belt along its northeastern boundary, bordering Hudson Bay); great areas of northern mixed forests; large

lakes and rivers covering an area of 26,800 square miles; a belt of treeless prairie extending to the southeastern corner of the Province; and patches of open prairie overlain by very fertile soil of great depth. The surface of the Province as a whole is comparatively level, the average elevation being between 500 and 1,000 feet; the greatest height of 2,727 feet is Duck Mountain northwest of Lake Dauphin.

About three-fifths of the Province, east and north of Lake Winnipeg, is underlain with Precambrian rock in which the presence of rich deposits of base metals has been confirmed, as in Ontario and Quebec (see Chapter XII).

The Province, although regarded as basically agricultural, possesses a wealth of water-power resources (Manitoba ranks after Ontario, Quebec and British Columbia in this respect) that, together with mineral and forest riches, have brought about an expanding industrial development.

*Saskatchewan.*—Saskatchewan lies between Manitoba and Alberta extending, like each of the Prairie Provinces, from the Interprovincial Boundary on the south to the 60th parallel of latitude which divides them from the Northwest Territories (for area see Table 1).

The northern half of the Province is abundantly watered by lakes and rivers and the topography is one of low relief. The Precambrian Shield that covers most of Quebec, Ontario and Manitoba penetrates over the northern third of Saskatchewan and has given evidence of potential richness of mineral wealth. This area is also rich in timber resources while the southerly two-thirds of the Province is generally fertile prairie with soil of great depth. In normal years there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops.

*Alberta.*—This Province lies between Saskatchewan and the Rocky Mountains (see map facing p. vi). Like Saskatchewan, the southern part of the Province is comprised in the dry, treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie. This gives way to the mixed forests covering the more northerly parts. The Precambrian rocks enter Alberta at its northeast corner, so that, excepting the fringe of mountainous country on its western border, practically the whole of the Province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace River, which has already resulted in the extension of settlement farther north than in any other part of Canada; and (2) the wonderful grazing lands in the foothills district which, rising sharply on the west, commence the ascent that continues to the very peaks of the Rocky Mountains. The southern half of the Province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half, the slope descends until elevations of well under 1,000 feet are reached at Lake Athabaska in the northeast corner.

Alberta has the most extensive coal resources of any province of the Dominion and has become the leading producer of petroleum and natural gas. Lumbering is important in the more mountainous western parts and in the north, but ranching is still pursued in the less populous sections. In the southern prairies there are considerable areas where the quantity and distribution of the natural precipitation makes permanent agriculture precarious and in these areas a number of large irrigation projects have been developed, taking their water supply from rivers rising in the mountains which form the western boundary of the Province. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the Chinook winds.

The coal and oil resources have provided the basis of an industrial development and Edmonton has become the railhead for the north country.

*British Columbia.*—British Columbia, the third largest and the most westerly province of the Dominion, includes many islands of the Pacific, notably the Queen Charlotte Group and Vancouver Island, the area of the latter being about 12,408 square miles.

The predominant feature of the Province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. As a rule the agricultural areas of these valleys are relatively small and broken but there are two large areas in the Peace River Block and the Stuart Lake District that are rich and have great agricultural possibilities. The shoreline of the Pacific is deeply indented with many inlets ideal for harbourage and has wonderful scenic aspects.

The wealth of forest resources supports the lumbering and pulp and paper industries and places British Columbia ahead of the other provinces in the production of lumber and timber (see Chapter IX). The Province also excels in fishery products, chiefly on account of its catches of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. The production of the metals, gold, copper, silver, lead and zinc has played an important role in the economic life of the Province since its early days, while valuable coal deposits on Vancouver Island, and at Crowsnest and Fernie in the interior, have been worked for many years. In regard to water-power resources, British Columbia ranks after Quebec and Ontario (see Chapter XIII).

*Yukon and the Northwest Territories.*—North of the western provinces the Dominion of Canada extends over an area of 1,516,758 square miles. This is largely an undeveloped domain, and for administrative purposes is divided into Yukon Territory and the Northwest Territories: the latter is subdivided into three Provisional Districts. This vast area is over twelve times the area of the British Isles and nearly half the area of the United States. Great rivers, like the Mackenzie and the Yukon are found there, as well as great inland bodies of water, such as Great Slave and Great Bear Lakes. There are many indications of mineral wealth and the radium mines of Great Bear Lake yield the only radium produced on the Continent.

The Yukon-Alaska Highway, recently completed, links the entire northwest, through Edmonton, with the cities of the Prairie Provinces and the United States. Airports and other facilities have been provided over wide sections of the Mackenzie Valley and in future it is likely that travel and transport by air will have a great influence on the development of the Territories. In Chapter XXIX, Section 1, details regarding the resources and administration of these areas are given.

## Section 1.—Orography

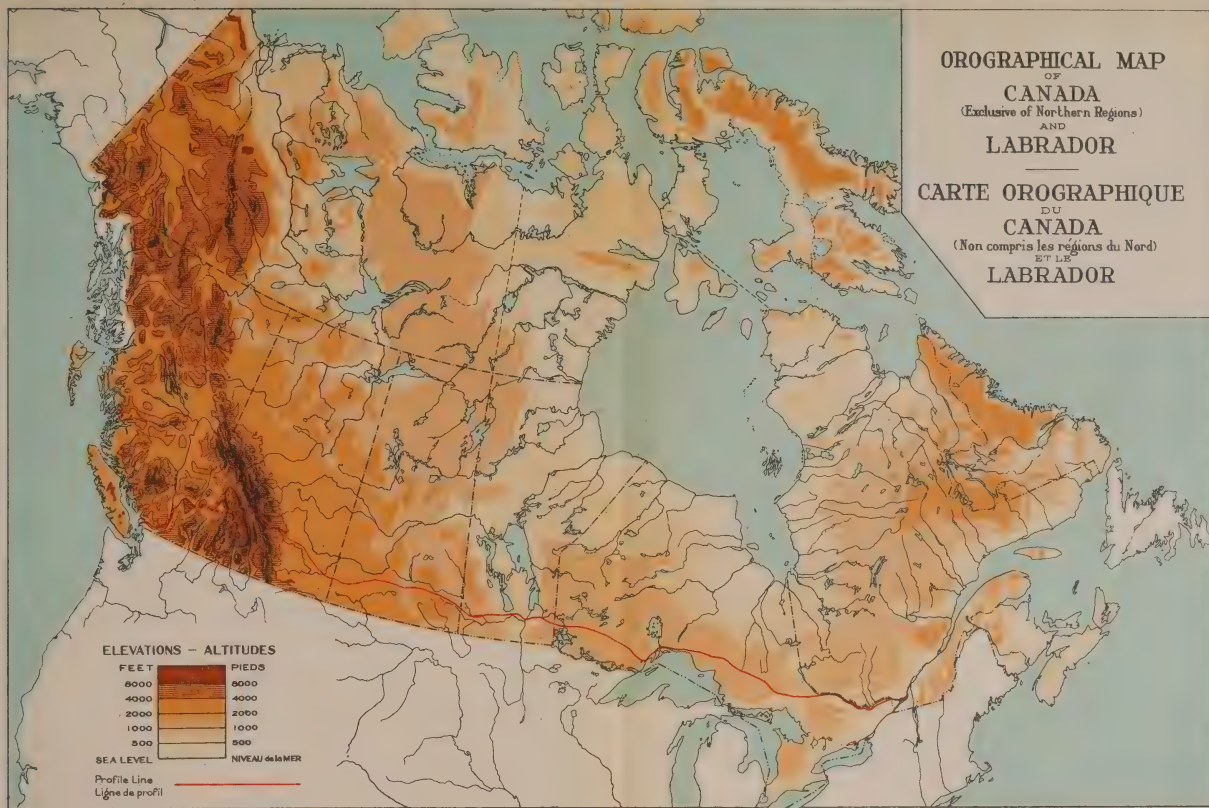

At pp. 2-4 of the 1941 edition of the Year Book a textual treatment of the predominant orographical features of Canada is given. This material is not subject to wide change and is not repeated here. At p. 10 of the 1940 edition the principal peaks exceeding 11,000 feet in elevation, classified by provinces and in tabular form, are given.

## Section 2.—Lakes and Rivers

*Lakes.*—The fresh-water area of Canada is unusually large, constituting over 6 p.c. of the total area of the country. The outstanding feature is the Great Lakes; particularly notable are the depth of Lake Superior and the shallowness of Lake St. Clair and Lake Erie.

Recently revised statistics for the Great Lakes are presented in Table 2; the elevations and depths given are in accord with the latest data adopted by the Canadian Hydrographic Service, the lengths are those of the steamer tracks, which are usually the course from one end to the other, following the centre of the lake; the areas in Canadian territory agree with the figures adopted by both the Canadian and United States Hydrographic Services.

For further information under this heading the reader is referred to pp. 4-6 of the 1941 Year Book and to pp. 12, 13 and 15 of the 1938 edition where tables of lakes and principal rivers, respectively, will be found.

## 2.—Areas, Elevations and Depths of the Great Lakes

Lake	Elevation Above Sea-level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles
Superior.....	602.25	383	160	1,302	31,820	11,110
Michigan.....	579.74	321	118	923	22,400	Nil
Huron.....	580.64	247	101	750	23,010	13,900
St. Clair.....	574.64	26	24	25	460	280
Erie.....	572.33	241	57	210	9,940	4,950
Ontario.....	245.81	193	53	774	7,540	3,980

## PART II.—GEOLOGY OF CANADA

See list at the front of this edition for special material published, under this heading, in previous editions of the Year Book.

## PART III.—SEISMOLOGY IN CANADA\*

Seismology—that branch of science which treats of earthquakes—has received considerable attention in Canada during recent years. It has been generally recognized that earthquakes are frequent in regions of adjustment of strata and are characteristic of the newer mountain and coast regions where steep level-gradients occur. The energy radiated from an earthquake in the form of elastic waves in the earth is, however, recorded on sensitive seismographs up to great distances, even to the antipodes of the earthquake. Seismological researches, while regularly recording the routine statistical data regarding earthquakes, seek also to determine particular causes. Moreover, they endeavour to ascertain the physical properties of the earth's crust and interior as revealed by the peculiarities in the 'time-distance curves' for earthquakes.

A time-distance curve, as its name implies, shows the relation between the areal surface distances from the origin of the earthquake to the various recording stations and the elapsed time required for the initial impulses and their various reflections to reach each station from the origin concerned. Of late years, these time-distance curves have been greatly improved. It may be said that their further

\* Prepared under the direction of R. Meldrum Stewart, Dominion Astronomer, Dominion Observatory, Department of Mines and Resources, by Ernest A. Hodgson, Ph.D.

improvement must be through taking account of the depth of the origin—the 'focal depth'. The point within the earth from which the energy of an earthquake is liberated is called the 'focus'; the point vertically above the focus, on the surface, the 'epicentre'.

The records of seismographs within five hundred miles of an earthquake are used to determine the epicentre, focal depth, and focal time. These same stations, together with the others at distances up to the antipodes of an earthquake, are used to determine arrival times for making up the time-distance curves. The curves themselves are the point of departure for a study of the earth's crust and deep interior.

Seismological records for Canada previous to the beginning of the present century are mostly to be found in historical documents. Such are the only reports of a great earthquake which disturbed Eastern Canada from above Montreal to below Quebec during the first part of the year 1663. Other earthquakes in Eastern Canada, for which similar records alone are available, occurred in 1732, 1791, 1860, and 1870. In 1925 another earthquake took place in the same region. It was the subject of careful study by the Seismological Division of the Dominion Observatory and several reports were published. Another which occurred near Timiskaming, Que., on Nov. 1, 1935, was also carefully studied. It is known that the earthquakes of 1925 and 1935 were felt over wide areas. The former was reported from Duluth to Halifax and from the Arctic to the Carolinas. The latter was felt even farther west and as far south as Virginia. Many small earthquakes are experienced in Eastern Canada from time to time. Those previous to 1906 are listed from historical records. The subsequent ones have been recorded on seismographs. A network of stations in Canada and New England has been formed into an association for studying these shocks. It is known as the North Eastern Seismological Association or, briefly, NESA.

The only other regions of Canada where earthquakes are sometimes experienced are British Columbia and the Arctic. The earthquakes in the west have been mostly centred near the Queen Charlotte Islands and, within the brief span during which records are available, none has been severe. A severe earthquake occurred off Banks Island in the Arctic in 1920 and three of great intensity have since been centred in Baffin Bay. The first of these occurred on Nov. 20, 1933.

Previous to Dec. 1, 1936, two Government Departments carried on seismological investigations in Canada. Seismological stations were established at Toronto (1897), and at Victoria (1898), each under the auspices of the Meteorological Service. Stations at Ottawa (1905), Halifax (1915), Saskatoon (1915), Shawinigan Falls (1927), and Seven Falls (1927) were established by the Dominion Observatory. The stations at Halifax and at Saskatoon are maintained, respectively, with the co-operation of Dalhousie University and the University of Saskatchewan. The stations at Shawinigan Falls and at Seven Falls are maintained with the co-operation of the Shawinigan Water and Power Company. The Victoria station is now operated with the co-operation of the Dominion Astrophysical Observatory. A station designed for special research was opened in 1939 at Kirkland Lake, Ont., with the co-operation of Lake Shore Mines.

The establishment of the last-named station was the first step in a research program for studying rockbursts in Lake Shore Mines. These bursts are in reality small earthquakes, in which the unbalance of forces is brought about by mining operations. The larger ones record on the seismographs at Ottawa, a distance of 279 miles, and several have recorded as far away as Boston, Mass. A study of wave velocities from these precisely located and timed shocks is yielding valuable scientific data and other seismological equipment in the mine is now successfully locating critical bursting conditions and gives promise of ultimate ability to predict.

A modified form of seismograph is used for seismic prospecting. Dynamite is detonated in specially drilled holes and recorded on seismographs at measured distances. A study made of the records obtained yields information which leads to the location of subsurface structures including those likely to contain oil. Such work is not done regularly in Canada as yet but private companies have been employed in Canada for survey work. On three of these surveys the Dominion Observatory had an observer attached to the group. The officers of that institution endeavour to keep themselves posted as to developments in Canada of this important application of seismology.

The Seismological Service of Canada, as now organized, has its central station at Ottawa. The records are developed at the auxiliary stations and sent to Ottawa for reading and the publication of reports. Seismological research is carried on at the Dominion Observatory and international co-operation in seismological work is arranged there.

## **PART IV.—THE FLORA OF CANADA**

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## **PART V.—FAUNAS OF CANADA**

See list at the front of this edition for special material, under this heading, published in previous editions of the Year Book.

## **PART VI.—LANDS, PARKS, SCENIC AND GAME RESOURCES OF CANADA**

Canada is distinctly a new country and her resources are, for the most part, in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. A notable feature, especially in so young a country, has been the effort directed to conservation and, in the cases of those resources that admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, silviculture, fur farming or the establishment of fish hatcheries.

Numerous surveys and investigations of the extent and value of the resources have been made from time to time and the results have been reviewed in special publications. Detailed information regarding individual natural resources will be found in the later chapters.

The treatment of resources considered below is concerned only with those summary phases of the subject that can be regarded as falling under the definition of physiography used in its wider interpretation. A classification of lands resources information on the National Parks and resources in game and scenery properly fall under this head.

**Lands Resources.**—Figures of Table 1 are, in the main, based on estimates of the Dominion Forest Service and by the Surveyor General and Chief of the Surveys and Engineering Branch, both of the Department of Mines and Resources; they show how the total land area of Canada is made up as between present and potential agricultural lands, present and potential forest lands and lands that are unproductive as regards surface resources. Between the totals of present and potential agricultural lands and the totals of forest lands there is, of course, duplication to the extent of the agricultural lands under forest.

### 1.—Land Area of Canada, Classified as Agricultural, Forested or Unproductive

NOTE.—The land area of Canada is shown classified by tenure in Chapter XXIX. In many cases figures differ from those given on p. 8 of the 1941 Year Book, owing to a new classification of forest lands and the rounding-off of estimates of agricultural lands. When these estimates are quoted, they should be further rounded off to the nearest hundred square miles.

Description	Prince Edward Island	Nova Scotia	New Brun- swick	Quebec	Ontario	Manitoba
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles
<b>Agricultural Land (Present and Potential)—</b>						
Occupied—Improved and pasture.....	1,333	2,722	2,749	20,427	28,915	24,003

Unproductive Forested Land.....	40,000	37,600	128,600	50,000	449,840
Tenure—Privately owned.....	11,731	10,004	7,386	Nil	102,212
Crown land.....	74,339	120,676	207,074	60,000	1,118,193
<b>Totals, Forested Land</b> .....	<b>86,070</b>	<b>130,680</b>	<b>214,460</b>	<b>60,000</b>	<b>1,220,405</b>
<b>Net Productive Land<sup>3</sup></b> .....	<b>182,670</b>	<b>216,240</b>	<b>221,810</b>	<b>70,067</b>	<b>1,514,402</b>
<b>Waste and Other Land<sup>4</sup></b> .....	<b>55,305</b>	<b>32,560</b>	<b>137,469</b>	<b>1,393,496</b>	<b>1,952,480</b>
<b>Totals, Land Area</b> .....	<b>237,975</b>	<b>248,800</b>	<b>359,279</b>	<b>1,463,563</b>	<b>3,466,882</b>

<sup>1</sup> These totals embrace present agricultural land of all possible classes and land that has agricultural possibilities in any sense. <sup>2</sup> Very small or negligible. <sup>3</sup> Total agricultural land plus forested and minus forested agricultural land. <sup>4</sup> Includes open muskeg, rock, road allowances, urban land, etc. <sup>5</sup> An estimate from provincial sources places the total area of land suitable for tillage at 6,626 sq. miles.

**National Parks of Canada.\***—The Dominion Government maintains the National Parks of Canada as a means of preserving regions of outstanding beauty or marked interest. The parks are dedicated to the people of Canada for their benefit, education and enjoyment, for which they provide remarkable opportunities. In normal times the parks are of great value in furnishing vacationlands for the Canadian people, in attracting tourists, and in contributing to Canada's foreign exchange resources. During the War they have made an important contribution in the building of morale and in furnishing facilities for recuperation, not only to the civilian public, but to members of the Armed Forces. Differing widely in character, and varying in purpose, the park areas include: the scenic and recreational parks situated from the Atlantic Coast to the Rocky and Selkirk Mountains; the national wild-animal parks or preserves—large fenced areas established for the protection and propagation of species once in danger of extinction; and the national historic parks. They are administered by the National Parks Bureau of the Lands, Parks and Forests Branch, Department of Mines and Resources. Under the supervision of this same body are the historic sites of national interest that have been acquired throughout the country. (See pp. 78-90 of the 1938 Year Book.)

In the national parks all wild life is rigidly protected, and primal natural conditions are maintained as far as possible. The local administration of the larger parks is carried out by resident superintendents, assisted by a warden service that

\* Prepared under the direction of R. A. Gibson, Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

is responsible for the necessary game and forest patrols. Opportunities for outdoor life and recreation have been increased by the provision of equipped camp-grounds, bath-houses and playgrounds, as well as by the construction of golf courses, tennis courts and outdoor swimming pools. Accommodation is provided in many of the parks by modern hotels, bungalow camps and chalets operated by private enterprise. Railways and motor roads serve the parks, and nearly 700 miles of motor highways and 2,500 miles of trails have been built to provide access to the outstanding scenic regions.

The scenic and recreational parks include regions of unsurpassed grandeur in the Rocky and Selkirk Mountains of Western Canada. Among these are: Banff, Jasper and Waterton Lakes National Parks in Alberta, on the eastern slope of the Rockies; Kootenay and Yoho Parks in British Columbia, on the western slope of the Rockies; and Glacier and Mount Revelstoke Parks (also in British Columbia), in the Selkirks. While these parks bear a general resemblance to one another, each possesses individual characteristics and phenomena, varying fauna and flora and different types of scenery. Banff Park contains the famous resorts, Banff and Lake Louise, and in Jasper Park is the well-known tourist centre, Jasper. Direct connection between these points is provided by the Banff-Jasper Highway, which was completed and opened for travel in 1940.

Eastward from the mountains are found Prince Albert National Park in Saskatchewan, a typical example of the forest-and-lake country bordering the northwestern plains region, and Riding Mountain National Park in Manitoba, a well-timbered area dotted with numerous lakes, and at a general altitude of 2,000 feet above sea-level. In Ontario are three small park units established primarily as recreational areas. They are Point Pelee, Georgian Bay Islands and St. Lawrence Islands National Parks.

The special animal parks were established for the protection of such species of mammalian wild life as buffalo, elk and pronghorned antelope, which, once in danger of extinction, now thrive under natural conditions in large fenced enclosures especially suited to their requirements. These reserves include Elk Island National Park in Alberta, 30 miles from Edmonton, which contains a large herd of buffalo and numerous deer, elk and moose. This park also includes a recreational development at Astotin Lake, where bathing, camping, tennis and golf may be enjoyed. Nemiskam National Park, also in Alberta, forms a sanctuary for pronghorned antelope.

In the Maritime Provinces, two remarkable areas have been established as National Parks. Cape Breton Highlands National Park, situated in the northern part of Cape Breton Island, Nova Scotia, has an area of 390 square miles. Its rugged and picturesque shoreline, indented by numerous bays and coves, and its rolling mountainous interior provide a delightful setting reminiscent of Scotland. Girdled on its eastern, northern and western sides by a spectacular highway called the Cabot Trail, and possessing such features as trails, beaches, tennis courts, and a golf links, the park offers many diversions to the visitor. Prince Edward Island National Park, containing an area of 7 square miles, extends for a distance of about 25 miles along the northern shore of the island province. Its chief attractions are magnificent sand beaches which permit salt-water bathing under ideal conditions. The Park also contains "Green Gables", the farmhouse made famous by the novels of L. M. Montgomery. A fine golf links, tennis courts, camp-grounds and marine drives enhance its attractions.

*The National Historic Parks.*—A further extension to the National Parks system was made in 1941 when seven areas, previously acquired and administered as historic sites, were designated as National Historic Parks. They are associated with events of outstanding interest in the early history of the Dominion and as such merit the distinction now conferred on them.

Of the National Historic Parks, one of the most interesting is Port Royal in Nova Scotia. This park area, situated on the shores of Annapolis Basin at Lower Granville, contains a replica of the Port Royal Habitation, a group of buildings constructed to shelter the first permanent European settlement in Canada. The present buildings stand on the exact site of the original Habitation erected in 1605 by DeMonts, Champlain, and Poutrincourt and destroyed by an English force in 1613.

The other new National Historic Parks are: Fortress of Louisbourg, Cape Breton Island, N.S.; Fort Chambly, Chambly Canton, Que.; Fort Lennox, Ile-aux-Noix, Que.; Fort Wellington, Prescott, Ont.; Fort Malden, Amherstburg, Ont.; and Fort Prince of Wales, Churchill, Man. Fort Anne Park, at Annapolis Royal, N.S. and Fort Beauséjour Park in New Brunswick, previously established as National Parks, were also designated National Historic Parks.

**National Historic Sites.**—The National Parks Bureau is also charged with the preservation, restoration and marking of historic sites throughout Canada. In the work of acquiring and selecting sites worthy of commemoration, the Bureau has the assistance of the Historic Sites and Monuments Board of Canada, a group of recognized authorities on the history of the section of the country they represent. Of the total number of sites that have been considered by the Board, more than 300 have been suitably marked by the Department of Mines and Resources and many others recommended for future attention.

**Migratory Birds Treaty.**—This Treaty and the legislation making it effective throughout Canada are administered by the National Parks Bureau of the Department of Mines and Resources. The Treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the Treaty, and regulations enacted for its enforcement, may be obtained from the Controller, National Parks Bureau, Department of Mines and Resources, Ottawa.

**—Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1943**

Park	Location	Date Estab- lished	Area	Characteristics
<b>Scenic and Recreational Parks</b>			sq. miles	
Banff.....	Western Alberta, on east slope of Rock- ies.	1885	2,585.00	Mountain playground containing famous resorts, Banff and Lake Louise. Typical example of central Rockies, with massive ranges, ice-fields, alpine valleys, glacier- fed lakes and hot mineral springs. Big game sanctuary. Recreations: climbing, motoring, riding, bathing, golf, tennis, fishing, skiing.
Yoho.....	Eastern British Col- umbia, on west slope of Rockies.	1886	507.00	Rugged scenery on western slope of Rockies. Contains famous Yoho Valley, with its numerous waterfalls; Kicking Horse Valley; Emerald, O'Hara, and Wapta Lakes; natural bridge. Alpine climbing centre.

## 2.—Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1943—continued

Park	Location	Date Established	Area sq. miles	Characteristics
<b>Scenic and Recreational Parks—con.</b>				
Glacier.....	Southeastern British Columbia, on the summit of the Selkirk Range.	1886	521.00	Superb example of Selkirk Mountain region, with snow-capped peaks, glaciers luxuriant forests, alpine flower-gardens numerous big game. Illecillewaet and Asulkan Glaciers; Rogers Pass; and famed Macdonald tunnel.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	220.00	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls. Recreations: motoring, riding, fishing, tennis, golf, camping.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.00	Rich in historical associations. Immense region of majestic peaks, deep canyons beautiful lakes, containing famous resort Jasper. Also Miette Hot Springs, Maligne Lake, Mount Edith Cavell and Columbia Ice-field. Big-game sanctuary. Recreations: motoring, climbing, riding, bathing, fishing, golf, tennis, skiing.
Mount Revelstoke...	Southeastern British Columbia, on the west slope of Selkirks.	1914	100.00	Alpine plateau on summit of Mount Revelstoke, accessible by spectacular 18-mile drive from Revelstoke. Contains mountain lakes, alpine flora, camp-sites. Game sanctuary; winter sports centre.
St. Lawrence Islands.	In St. Lawrence River between Morrisburg and Kingston, Ont.	1914 (Reserved 1904)	185.60 (acres)	Mainland reservation and thirteen islands among "Thousand Islands". Recreational area; camping, fishing, bathing.
Point Pelee.....	Southern Ontario, on Lake Erie.	1918	6.04	Most southerly mainland point in Canada (41° 54' N.). Recreational area with unique flora and fine beaches. Resting place for many migratory birds. Bathing, camping.
Kootenay.....	Southeastern British Columbia, on the west slope of Rockies.	1920	587.00	Mountain park bordering Vermilion. Sinclair section of Banff-Windermere Highway. Contains Sinclair Canyon, Radium Hot Springs, Marble Canyon. Big-game sanctuary. Recreations: motoring, bathing, camping.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,869.00 (approx.)	Forested lakeland of northwestern Canada, with extensive waterways and fine beaches. Interesting fauna; summer resort. Recreations: boating, bathing, fishing, camping, tennis, golf.
Riding Mountain....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.08	Rolling woodland, with crystal lakes, on summit of Manitoba escarpment. Natural home for big game, including elk, deer, moose. Summer resort. Recreations: bathing, boating, fishing, tennis, golf, camping.
Georgian Bay Islands (including Flowerpot Island Reserve)	In Georgian Bay, near Midland, Ont.	1929	5.37	Thirty islands in Georgian Bay. Recreational and camping area; boating, bathing, fishing. Unique limestone formations and caves on Flowerpot Island.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	390.00 (approx.)	Outstanding example of rugged coastline with mountain background. Remarkable views of Atlantic Ocean and Gulf of St. Lawrence visible from highway, Cabot Trail. Recreations: bathing, boating, golf, tennis, deep-sea fishing, camping.

**2.—Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1943—continued**

Park	Location	Date Established	Area sq. miles	Characteristics
<b>Scenic and Recreational Parks—conc.</b>				
Prince Edward Island.	North shore of Prince Edward Island.	1937	7.00	Strip 25 miles long on north shore. Recreational area with magnificent beaches. Contains famed Green Gables farmstead. Recreations: bathing, boating, fishing, golf, bowling, camping.
<b>Animal Parks and Reserves</b>				
Buffalo.....	Eastern Alberta, near Wainwright.	1908	197.50	Fenced area originally set aside for the preservation of buffalo and other big game. Animal population since withdrawn; area now being utilized by Department of National Defence for war purposes.
Elk Island.....	Central Alberta, near Lamont.	1913 (Reserved 1906)	51.20	Fenced preserve containing a large herd of plains buffalo; also numerous deer, elk and moose. Recreational area at Asotin Lake; camping, boating, bathing, tennis and golf.
Nemiskam.....	Southern Alberta, near Foremost.	1922	8.50	Fenced preserve containing a herd of pronghorned antelope, a species native to the region.
Wood Buffalo <sup>1</sup> .....	Partly in Alberta (13,675 sq. miles) and partly in Northwest Territories (3,625 sq. miles), west of Athabaska and Slave Rivers.	1922	17,300.00 (approx.)	Immense unfenced area of forests and open plains, dotted with lakes and coursed by numerous streams and rivers. Contains a large herd of buffalo, including the "woodland" type and also surplus plains buffalo from Buffalo National Park; also bear, beaver, caribou, deer, moose and waterfowl. Area as yet undeveloped.
<b>Historic Parks</b>				
Fort Anne.....	Nova Scotia (Annapolis Royal).	1917	31.00 (acres)	Site of early Acadian settlement of Port Royal. Contains well-preserved fortifications of earthworks type; also museum housing a fine historical library and numerous exhibits relating to early periods.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	59.00 (acres)	Site of French fort erected in middle of 18th century. Renamed Fort Cumberland by British on capture in 1755; original name since restored. Contains museum with many exhibits relating to history of region.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1941	340 (acres)	Old walled city and strategic military and naval station built by the French, 1720-40. Captured by the British in 1758, it was destroyed in 1760. A museum on the site contains interesting mementoes of historic past.
Port Royal.....	Lower Granville, N.S., 8 miles from Annapolis Royal.	1941	17 (acres)	Reconstruction on the exact site, of the Port Royal "Habitation" erected by De Monts and Champlain in 1605. The original group of buildings, which sheltered the first permanent European settlement in Canada, was destroyed in 1613.

<sup>1</sup> Administered by the Bureau of Northwest Territories and Yukon Affairs of the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

## 2.—Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1943—concluded

Park	Location	Date Estab- lished	Area	Characteristics
<b>Historic Parks—conc.</b>			sq. miles	
Fort Chambly.....	Chambly Canton, Que.	1941	2.5 (acres)	French fort first constructed in 1665 on Richelieu River. Rebuilt of stone in 1711, it figured in several wars. Contains a museum housing many interesting exhibits. A military cemetery outside walls of fort is included in park area.
Fort Lennox.....	Ile-aux-Noix, Que. near St. Johns.	1941	210 (acres)	Military post constructed by British on site of early French fort, to command Richelieu River water route from south. The entire property is being utilized for war purposes by the Department of National Defence.
Fort Wellington.....	Prescott, Ont.	1941	8.5 (acres)	Contains well-preserved earthworks, block-house and other buildings constructed by British as base for defence of communications between Kingston and Montreal. The block-house contains a small museum.
Fort Malden.....	Amherstburg, Ont.	1941	3 (acres)	Situated on the banks of the Detroit-River the site of one of the principal frontier military posts in Upper Canada. A new museum building contains interesting exhibits of the region.
Fort Prince of Wales.	Northern Mani- toba, near Churchill.	1941	50 (acres)	Massive stone fort built 1733-71, to secure control of Hudson Bay for Hudson's Bay Company and England. The fort was captured and partially destroyed by a French force in 1782.

### SUMMARY OF THE AREAS OF NATIONAL PARKS, BY PROVINCES

Province	Area	Province	Area
	sq. miles		sq. miles
Prince Edward Island.....	7.00	Saskatchewan.....	1,869.00
Nova Scotia.....	390.60	Alberta.....	20,937.20 <sup>1</sup>

Quebec.....	0.33	Northwest Territories.....	3,625.00 <sup>1</sup>
Ontario.....	11.72	<b>Total.....</b>	<b>29,704.10</b>
Manitoba.....	1,148.16		

<sup>1</sup> Including portion of Wood Buffalo Park.

**Provincial Parks.**—In addition to the national parks throughout Canada administered by the Dominion Government, most of the provinces maintain provincial parks for the protection of wild life and as recreational areas. Among the largest of these are the Algonquin Park (2,740 square miles) in Ontario, the Laurentides Park (3,565 square miles) in Quebec and Tweedsmuir Park (approximately 5,400 square miles) in British Columbia.

**Game and Scenery.**—The resources of Canada from the standpoints of the sportsman and tourist are both unique and varied. In the wooded and unsettled areas of each province there are many moose, deer, bear and smaller game, while in the western part of the Dominion there are also wapiti, caribou, mountain sheep, mountain goat, grizzly bear and lynx. Mountain lion, or cougar, are found in

British Columbia and in the mountains of Alberta, while in the Northwest and the Far North there still exist herds of buffalo and musk-ox, which are given absolute protection by the Dominion Government.

Ruffed and spruce grouse are found in the wooded areas of Canada from coast to coast. Prairie chicken and Hungarian partridge inhabit the open prairies and the partly timbered areas of the three mid-western provinces. Franklin grouse are native to the mountains of the West and the ptarmigan, an Arctic grouse, lives in the treeless northern plains and is also found in the high mountains of Alberta and British Columbia.

Canada is the natural habitat of many kinds of waterfowl which abound in the myriad lakes that form so large a feature of Canadian scenery. This is particularly true of the three mid-western provinces, where the lakes are of the shallow, surface type that furnishes the most abundant feed for waterfowl.

The valleys of Nova Scotia and New Brunswick, the broken lake-country of northern Quebec, Ontario, Manitoba and Saskatchewan, as well as the mountain districts of British Columbia and Alberta, offer a variety of attractions including innumerable game preserves that have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers that form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, while angling is permitted, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter, at proper seasons, a wealth of game species.

## THE CANADIAN GOVERNMENT'S REINDEER EXPERIMENT \*

**Events Leading to Present Government Policy.**—The establishment of herds of reindeer in Northern Canada has not only supplemented the wild life resources of the region but has also laid the foundations for an industry that is intended to improve the economic condition of the native Eskimos. For centuries, barren-ground caribou, together with seals, whales, walrus, and fish, formed the principal basis of subsistence of these people. The caribou, ranging the northern tundras in great herds, provided hides for the manufacture of clothing and sleeping bags, sinew for thread, and bones and antlers from which were made many useful implements. The meat formed an important part of the Eskimo's food supply.

The arrival of traders and the subsequent introduction of firearms into the Arctic resulted in a great reduction in the numbers of caribou, and herds that escaped decimation changed their routes of migration to the more isolated regions. The consequent scarcity of caribou and the encroachment of civilization on what once was the exclusive domain of the Eskimos, brought about a revolutionary change in the habits of the natives. In some areas they became entirely dependent on trapping in order to obtain a medium of exchange with which to purchase food and clothing, and their economic condition varied with fluctuations in the supply of fur-bearing animals and the price of furs.

\* Prepared under the direction of R. A. Gibson, Deputy Commissioner, Administration of the Northwest Territories, Ottawa.

In 1926, with a view to improving the welfare of the native population, the Dominion Government undertook the introduction of a herd of reindeer to a suitable area in the Mackenzie District of the Northwest Territories. Reindeer have long had an important place in the economy of peoples in various parts of northern Europe and Asia, providing them with food and clothing and a means of livelihood at all seasons of the year. The introduction of these animals to Alaska from Siberia during the latter part of the nineteenth century relieved growing destitution among the natives along the Arctic coast and provided an industry that is still serving their needs and interests.

Previous attempts to introduce reindeer into Canada as a source of food and clothing were unsuccessful. The first important venture appears to have been made by the International Grenfell Association. Commencing in 1907, the late Sir Wilfrid Grenfell brought reindeer from Norway to northern Newfoundland with a view to their later use in Labrador. Although the original herd of 250 animals increased in a few years to more than 1,200 head, and many of the animals were landed on the southeastern coast of the Province of Quebec, a series of misfortunes culminated in the failure of the venture. In 1921, the Hudson's Bay Reindeer Company landed 550 reindeer from Norway on southern Baffin Island, but the animals soon scattered and dwindled rapidly in numbers, and the scheme was abandoned.

Notwithstanding these reverses, observers believed that there was a place for reindeer in the economic life of Canada. This opinion was supported by the successful introduction of reindeer into Alaska as mentioned above.

**The Establishment of the Main Herd.**—In 1919 a Royal Commission was appointed by the Dominion Government to study the possibilities of developing reindeer and musk-ox industries in the Arctic and sub-Arctic regions of Canada. A vast amount of information was assembled and studied, and in 1922 the Commission recommended the establishment of experimental herds of reindeer in locations to be selected.

*Preliminary Investigation.*—Following up the recommendations of the Royal Commission, the Canadian Government undertook an extensive investigation to ascertain if areas in northern Canada would be suitable for reindeer pasturage, and in April, 1926, a botanist experienced in Arctic travel was appointed to conduct the survey. Prior to the study of the Canadian range, the investigator and an assistant visited Alaska to observe the conditions under which reindeer were herded. A survey of the grazing possibilities of the area lying between the Yukon-Alaska boundary on the west, Coppermine River on the east, Great Bear Lake on the south and the Arctic Ocean on the north was made in the years 1926-28.

The report of the investigations showed that conditions in some parts of the region examined were very suitable for the maintenance of reindeer. Two separate areas, one situated between the Alaska-Yukon Boundary and Franklin Bay, and the other north of Great Bear Lake, were estimated to be capable of supporting several hundred thousand head.

*The Purchase of the Basic Stock.*—Steps were accordingly taken to arrange for the delivery, by an Alaskan reindeer company, of 3,000 reindeer to a selected range near the mouth of Mackenzie River.

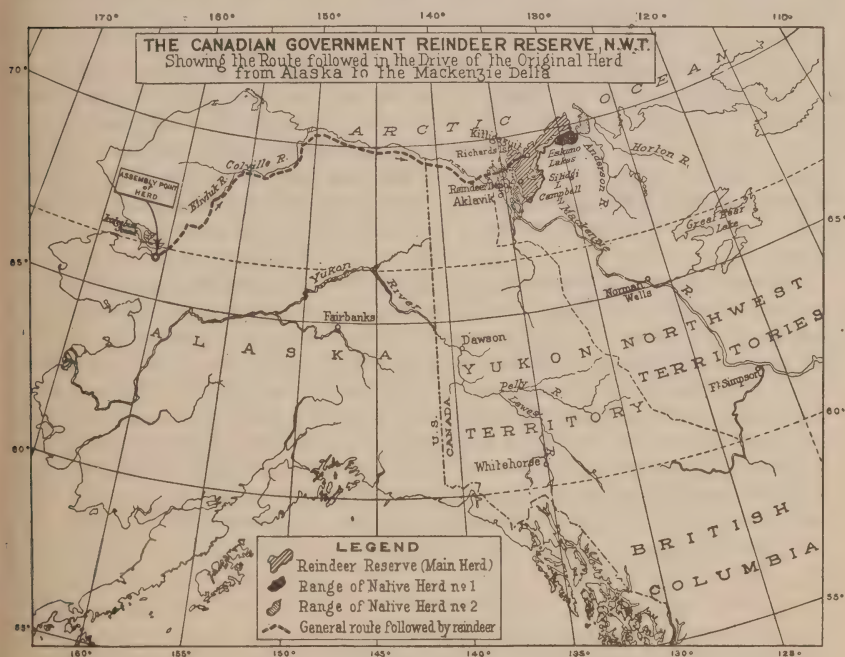

The selection of the stock for the drive was made in Alaska by the investigator mentioned. The animals numbered about 3,400 head. The greater proportion was does, with some 300 bucks and about 250 steers for food and draught

purposes. The herd was assembled near the head of Kotzebue Sound in north-western Alaska, where the drive to Canada was commenced in December, 1929. The movement was in charge of a veteran Lapp reindeer herder, assisted by other Lapps and several Eskimos. Supplies were drawn on sleds by reindeer, and dog teams were also used for this purpose.

*The Drive from Alaska to the Mackenzie Delta.*—The drive proved to be an epic in the annals of northern travel. The route selected was northeasterly across the Brooks Mountains to the head-waters of Etivluk River, down Etivluk and Colville Rivers to the Arctic coast, and thence eastward to the delta of the Mackenzie. The vendors, who had undertaken the responsibility of delivering the deer, experienced difficulties from the start. The homing instinct of the reindeer became apparent, and many broke away and were not recovered. Blizzards, intense cold, attacks by wolves and the presence of other reindeer and caribou impeded progress.

The following spring the drive was halted for the fawning season, and for the remainder of the summer the herd grazed and rested. As the trek continued losses were recouped to some extent by the yearly crop of fawns. The deer arrived in Canadian territory in the spring of 1933. An attempt to cross the Mackenzie

River Delta in the winter of 1933-34 was unsuccessful because of unsuitable weather and ice conditions, and the delivery of the herd was not made until March, 1935. The total number of deer delivered was 2,370 made up of 1,498 does, 611 bucks, and 261 steers. Of this number, it was estimated that less than twenty per cent was original stock that left the Alaskan range in 1929.

*The Choice of the Reindeer Reserve and the Establishment of the Herd.*—In anticipation of the delivery of the reindeer, preparations had been made in 1930-31 for their reception on the new range. A corral was constructed at Kittigazuit on the Arctic Coast east of the Mackenzie Delta, and a headquarters for the reindeer staff was established about sixty miles inland on the east branch of the Mackenzie River. At this point buildings for the accommodation of the employees, and warehouses, were constructed. Facilities for radio communication were later installed. The reindeer station lies at the foot of the Caribou Hills which follow the course of the Mackenzie River and attain an elevation of 500 feet.

Three Lapp herders and their families were brought from Norway in 1931 to assist in handling the deer on arrival and in training native Eskimos as herders. In the later stages of the reindeer drive from Alaska, these Lapps furnished valuable assistance. In December, 1933, the Canadian Government established a Reindeer Reserve immediately east of the Mackenzie Delta. The Reserve contains an area of approximately 6,600 square miles, including summer and winter ranges. The summer range comprises the coastal area, including Richards Island, and is well supplied with shrubs, principally willows, and grasses. The winter range lies inland along the east channel of the Mackenzie River, extending northeasterly along Sitidgi Lake and the Eskimo Lakes, and supports a good growth of reindeer lichens, which constitute the main winter diet of the reindeer.

During the first summer on the Reserve, the reindeer grazed in the coastal area in the vicinity of the corral at Kittigazuit. A round-up and count of the deer made in the summer of 1935 showed that the herd had been increased by about 800 fawns. By early winter the herd had been moved inland to the winter range in the vicinity of the reindeer station, and the following spring it was taken to Richards Island. This island, which lies a short distance off the coast, has proved very suitable for summer grazing, and has been used for that purpose each succeeding year. The corral for the round-up of the main herd is now located on Richards Island.

Since the introduction of the reindeer to the reserve in Canada, excellent results have been obtained. Annual crops of healthy fawns have steadily increased the main herd, permitting the establishment of two additional herds under native management near Anderson and Horton Rivers, about 150 miles east of the Reserve. The total increase of the reindeer since the original herd was delivered has exceeded 12,000 head, and according to the latest reports the three existing herds now number more than 9,000 animals. The difference is accounted for by donations of meat to mission schools and hospitals in the Mackenzie Delta region; animals used for food and clothing by the reindeer staff, including herders and apprentices; sales of surplus meat to natives and residents of the vicinity; strays; and losses by natural causes.

**The Training of Native Herders and the Establishment of Native Herds.**—Since the primary purpose of the reindeer industry in Canada is to help the natives support themselves, the policy is to train young Eskimos and Indians in reindeer husbandry and build up a number of herds under native management at suitable locations. The main herd is maintained on the Reindeer Reserve as a nucleus for the establishment of additional herds to be managed by the natives. Steps have been taken from the outset of the experiment to interest young natives to train as apprentice herders, and while in training they assist experienced herders in handling the reindeer. A number of apprentices or helpers are maintained with the main herd and the native herds where they receive training which may qualify them eventually for the management of reindeer herds on their own account.

Native Herd No. 1 was formed in December, 1938, by the separation of about 950 deer from the main herd and their transfer to an area in the vicinity of Anderson River. These animals were placed in charge of two Eskimos, father and son. The latter had received several years training as an apprentice herder on the Reserve, and the father was owner of a schooner necessary for the transfer of families and supplies. The agreement covering the transfer of the deer provides that when the new herd has sufficiently increased in size, a number of deer equal to the animals supplied shall be returned to the Department. The deer so returned may constitute the basis of another native herd.

In December, 1940, Native Herd No. 2 was established by separating 825 reindeer from the main herd and driving them to a location near Horton River, which lies east of Anderson River. These deer likewise were entrusted to two Eskimos, one of whom had trained as an apprentice herder on the Reserve. The other was in possession of a schooner. During the period in which these native herds are being built up, the natives in charge are allowed to take any animals required from surplus stock for their own use as food or clothing, in addition to a reasonable number to be used for the sale of meat and other products. On the return of deer equal to the number received on loan, the remaining deer will become the exclusive property of the natives in charge with the proviso that no live deer shall be disposed of to white men.

It has been the practice to hold a round-up of the main herd on Richards Island about the end of July, and a count made in 1943 placed the number of deer at 6,057 head. Round-ups of Native Herd No. 1 have been held at corrals on Nicholson Island at the mouth of Anderson River, and the 1943 return showed that the herd contained 2,104 deer. Corrals have not yet been constructed in the vicinity of Native Herd No. 2, but the number of deer was estimated in 1943 at 1,070.

**General Management Routine.**—The routine of the reindeer management on the Reserve commences in the spring with the movement of the main herd from the winter range to the summer range on Richards Island, where fawning begins about the tenth of April and extends into June. This period is followed by the movement of the deer to the northern part of the Island, where the winds on the Arctic headlands disperse insect pests. Later the deer are moved toward the corralling grounds. Round-up operations may be completed within four or five days if weather conditions are suitable. Following the round-up, the reindeer continue to graze on the summer range until transferred to the mainland, either by swimming in September, or by driving over the ice in the early winter. The slaughter of surplus stock occurs at different times. An autumn slaughter is held about the end of September and a winter slaughter about the end of November. In addition, some animals may be taken for meat in March when the herd passes the main station on the way from the winter range to Richards Island.

The annual round-up on the summer range is probably the most interesting event to occur on the Reindeer Reserve. The round-up affords an opportunity to balance the herd in relation to breeding stock and to select deer for slaughter later in the season. The animals are corralled, examined individually for condition, marked and counted. The round-up also provides an opportunity to demonstrate the handling of reindeer in large numbers, and the natives of the region who assemble for the occasion take a keen interest in the activities. The official count taken at this time shows the surviving fawn increase for the year. The young animals and those that escaped corralling the previous year are given a distinguishing herd mark

on the ear. Distinctive marks are made for each herd. The marking of the ear is an old established practice in the reindeer industry and owing to the thinness of a reindeer's skin is preferred to branding.

An important development in February, 1943, was the slaughter of about 300 animals of meat stock from Native Herd No. 1 and the sale of the meat to residents of the Aklavik area where there was a meat shortage. This sale provided a substantial income for the natives in charge of the herd. Reindeer meat has a fine grain and a distinctive flavour, is palatable and easily digested. If properly handled, the meat when cooked is juicy, tender, and free from gamy flavour.

In some northern countries reindeer are used for transportation purposes by nomadic peoples who depend on these animals for subsistence. In the Canadian herds a number of steers broken to harness are maintained for such purposes as moving the herd camp, hauling firewood, and transferring the herders' families, baggage, and supplies between the winter and summer ranges. Although sled deer are very useful under conditions where their natural food is obtainable en route, it is unlikely that they will replace dog teams for winter sled trips in the Canadian north.

**Characteristics of the Reindeer.**—Domesticated reindeer and wild caribou have somewhat similar physical characteristics and have been classified in the same genus of the deer family. They differ from other species of the deer family in that both sexes have horns. These are shed annually. The caribou range over a wide area in their migration but reindeer can be maintained within a comparatively limited area and are thus available when required. Reindeer also become attached to their home range and it was observed that as the older animals of the Canadian herd were replaced by younger stock, the tendency of the deer to return to their former Alaskan range disappeared. There is, however, an inclination on the part of animals removed from the main herd to return to the area in which they were born.

Reindeer in Canada and Alaska are usually brown and grey in colour. The neck and shoulders are greyish white, with darker shades on the back, abdomen, and hind quarters. The legs are almost black. The head is dark, and the mane, which becomes long in winter, is almost white. White and spotted deer are not uncommon. A full-grown reindeer stands from 42 to 44 inches high and measures about 7 feet from nose to tip of tail. The average dressed weight of steers in Canadian herds is now about 170 pounds, and that of aged does, 140 pounds.

As observed in North America, reindeer are considered to have some of the traits of sheep, cattle and horses. They are gregarious like sheep, graze somewhat like cattle, and in intelligence and activity more nearly resemble the horse. They prefer to travel facing the wind, have no difficulty in swimming a river or small lake when necessary, and are responsive to control by herders and their dogs. They tend to become wild only when herding and round-ups are neglected. Reindeer when disturbed form a compact body and rotate in a limited area. This movement is known as "milling", and in the Canadian herds the deer move in a counter-clockwise manner. This movement, clockwise or counter-clockwise, has an important bearing on corral construction.

The form of herding practised on the Canadian range requires the presence of herders with the reindeer at all times. Each herd, which is distinctively marked, is maintained in a separate location. This is known as "close herding", in contrast with "open herding" which is followed to some extent in Alaska where reindeer with different markings roam together over the range and are counted at a general round-up in which the various owners take part.

Meat for food is the principal product of the reindeer industry. The hides of fawns are used for parkas, and hides of mature animals, when tanned, are suitable for articles of clothing and other purposes. Experiments in tanning are being made and the methods used by Indians are also being studied, so that surplus hides may be utilized to the best advantage for local use and to supply any markets for these products. With the development of the industry in Canada it is hoped that uses can be found for other reindeer products such as hair, hooves, sinews, horns, etc.

Canada's experiment in reindeer husbandry is under the direction of the North-west Territories Administration of the Department of Mines and Resources at Ottawa. Inspections of the herds are made from time to time by officers of the Department and others qualified to observe progress and recommend measures that will ensure the health of the animals. Dr. Seymour Hadwen, internationally-known authority on reindeer and other animal life, made an inspection of the main herd in 1939 and reported the deer to be in excellent condition and practically free of parasites. He also commented on the amazing fertility of the deer as apparent from the fact that one-year-old does were bearing fawns. This he attributed to the excellent grazing conditions. A gradual increase in the dressed weight of slaughtered steers also indicated the health and vigour of the reindeer.

The Administration is undertaking further investigations in order to define suitable locations for the establishment of additional herds. These will involve preliminary reconnaissance and botanical examination of the ground in regions where reindeer husbandry would be desirable, so that the forage available may be determined. It is becoming increasingly apparent that the scientific study of reindeer husbandry is essential to ensure the development of reindeer herding in the best interests of the natives.

As the industry is visualized at present, reindeer should provide a convenient and dependable source of food and clothing and form a valuable reserve against periods of shortage in other necessities. As the natives learn to depend more on the herds of reindeer for subsistence they may become independent of fluctuations in the supply of game and the price of furs, and thus achieve a more stable economic life than is possible under ordinary conditions which govern their nomadic life along the Arctic coast of Canada.

### METEOROLOGY RELATED TO THE SCIENCE OF AVIATION\*

#### Introduction

In 1872, the Dominion Government authorized the organization of the Meteorological Service with headquarters at Toronto, in line with similar action being taken by other nations. This required the establishment of weather stations that could report observations to headquarters three times a day. These stations were located along the lower lakes, the St. Lawrence Valley and the Maritime Provinces. At the same time, arrangements were made to receive observations from a number of stations in the United States, Canadian observations being sent in return. This reciprocal arrangement has been maintained ever since and has continued to grow and expand with the expansion of both Services. By 1876 the Canadian meteorologists had acquired sufficient experience in the movements of high- and low-pressure systems to enable them to issue forecasts for the general public and for storm warnings.

Over the next fifty years or more, the problems were: (1) to increase the area from which observations could be obtained; (2) to explore the atmosphere to find out its physical conditions; (3) to investigate the physical processes operating in the atmosphere.

*Observation Area.*—The enlargement of the area from which observations could be obtained depended, in the early days, chiefly on the telegraphic facilities, and later on wireless; stations are now established over the North American Continent up to the rim of the Arctic where the number of stations has been gradually increased.

*Atmosphere Exploration.*—It was early recognized that it was necessary to obtain a knowledge of the physical conditions prevailing in the upper atmosphere before it would be possible to explain the processes operating therein. This exploration was commenced about the beginning of the century by sending up instruments attached to kites, which gave a record of the pressure, temperature and humidity. However, kites could not reach very great heights. To overcome this limitation, balloons were released with self-recording instruments attached and these gave a continuous record of pressure, temperature and humidity at all levels through which the balloon passed. Many of these instruments were recovered and from them the meteorologists were able to obtain a record of actual conditions in the upper atmosphere.

Such records, however, could not be used as a basis for forecasting since they were not recovered for several days—in some cases, months or even years. The advent of the aeroplane made it possible to obtain this information at once for forecasting purposes. Further progress was made with the development of short-

---

\* Prepared under the direction of J. Patterson, O.B.E., LL.D., Director, Meteorological Service, Department of Transport, Toronto.

wave radio and it was not long before a meteorograph combined with a radio-transmitter was designed. This instrument was sent up by balloon and signalled back the temperature, pressure and humidity of the upper atmosphere as the balloon travelled through space. Thus upper air data could be obtained up to much greater heights than was possible by aeroplane and provided the basis for determining the physical conditions in the upper atmosphere for forecasting purposes.

*Investigation of the Physical Processes Operating in the Atmosphere.*—Until twenty-five years ago, the general principle underlying forecasting was based on the movements of the high- and low-pressure systems as they were first recognized when the Canadian Service was established. The exploration of the upper atmosphere and the general extension of the area over which observations could be obtained then enabled two Norwegians, V. Bjerknes and his son J. Bjerknes, to show that instead of the wind circulation associated with these high- and low-pressure

FIG. I.

systems being continuous and passing from one to the other in an uninterrupted flow, as indicated in Fig. I, there was a very marked discontinuity. This discontinuity was so well defined that it indicated that these two pressure systems were in reality two distinct air masses with very different properties, depending on their origin. These masses came to be known as cold air masses or warm air masses depending on whether they had their origin in the Arctic regions or in the tropics. Also, it was discovered that the line of separation of these two air masses was very distinct and is now called a front. If a warm air mass is advancing against a cold air mass, the line of separation is known as a 'warm front'; conversely, a 'cold front' is a line of separation of a cold air mass advancing against a warm air mass.

Figure II gives a horizontal cross-section and a vertical cross-section along the line AB of the horizontal section through what is called an 'ideal cyclone'. It shows the rain areas associated with the system and the vertical section shows the general

structure of the atmosphere. The air in the warm sector is decidedly warmer and contains more moisture than either of the cold sectors. The cold section in the rear is generally considerably colder than that in front.

The above represents a fully developed pressure system, but there are gradations from this until, in some cases, it is almost impossible to distinguish between the warm and the cold sectors. These systems move generally in some easterly

FIG. II.

direction and may maintain their identity for very great distances. The principle of operation in the warm front is that the warm air mass overruns the cold air mass, thus lifting the warm, moist air from the surface, gradually cooling it until the moisture contained therein is condensed into cloud and finally falls as rain. Along the cold front the cold air advances as a great bulging mass and undercuts the warm air, forcing it up to great heights and producing great turbulence, cloud, frequent thunder-storms, hail storms, line squalls and heavy rain. As the system passes, the cold air mass enters the region and the weather clears.

Meteorologists are making intensive investigations of the many problems involved in this new conception in order to improve the accuracy of forecasting and to increase the period for which the forecasts can be made.

### Meteorology and Aviation

With the development of aviation, new problems were presented to meteorologists and very great demands were made upon them; it was felt that at last meteorology had come into its own. Since the atmosphere is the realm in which the aviator operates, the success and safety of flying, in the final analysis, depend on meteorology.

The problems that aviation presented to the meteorologist were very different from those to which he had been accustomed for land and sea operations. In the latter case the principal information required was in regard to winds, gales, storms, fog, etc., and, while these are of importance for landing conditions, they are not the only vital problems the aviator has to face. He wants to know, in addition, what is going on in the regions where he is flying, such as icing, clouds (their height and thickness), visibility, thunder-storms, etc., all of which are vital to the success of airline operations. Fortunately, the discovery of the actual processes that are in operation in the atmosphere have enabled the meteorologist to supply this vital information.

**Meteorological Service for Aviation.**—The first attempt to establish a meteorological service in Canada for aviation was made in 1930-31 for the visit of the R-100 and for the air-mail service from Montreal to Windsor and from Winnipeg to Edmonton. This was discontinued in 1932 owing to the economic depression. The small technical staff was retained and, in anticipation of further developments, some of the meteorologists were sent to Norway to study the new technique of weather forecasting according to air-mass analysis methods. On their return, an intensive study was made of air masses on the North American Continent in anticipation of the resumption of a regular air service. There were only a very few regular forecasters in the Service and they were fully occupied with forecasting for the general public and issuing storm warnings, so that it was necessary to begin at the very bottom and build up a forecasting staff for the airways. For this purpose highly trained meteorologists were required and the problem was met by the University of Toronto, which established a one-year post-graduate course in meteorology leading to the M.A. degree. This was open to honour graduates in mathematics and physics from recognized universities and most of the meteorologists for the new service, when it was established, were recruited from these graduates.

**Transatlantic Air Service.**—The actual beginning of a meteorological organization for aviation dates from 1936, when it was decided to undertake experimental flights to test the feasibility of commercial flying across the North Atlantic, considered the most hazardous and difficult route for flying in the world. The work was done in conjunction with the United Kingdom, Ireland and Newfoundland, Canada assuming responsibility for forecasting and supplying weather information for the flights west of 30 degrees W. longitude.

A small forecasting staff was recruited and a forecast centre established at Botwood, Nfld. Experimental flights carried out in 1937 by Imperial Airways from the United Kingdom and Pan American Airways from the United States proved the feasibility of using the northern route, during the summer months at any rate, for a passenger service that was commenced by Pan American Airways in 1939 but discontinued on the outbreak of war. Shortly afterwards it was decided to test the practicability of flying bombers across the Atlantic. The prime requisite for this operation was the providing of accurate forecasts and, fortunately, the experience gained during the experimental flights proved invaluable even though weather reports from ships at sea were naturally no longer available. It was soon found that it was perfectly feasible to fly bombers across the Atlantic throughout the whole year and this service has grown and expanded enormously since that time.

The main forecast centre originally set up at Botwood but later at Gander, Nfld., was shifted to Dorval (Montreal), the centre of the R.A.F. Transport Command, with other forecast centres at Gander, Nfld., and Goose Bay, Labrador.

These centres provide forecasts and weather information for all R.A.F. Ferry Command operations west of 30 degrees W. longitude and extend to all routes over the Atlantic.

**Weather Service for the Trans-Canada Airlines.**—In 1937, the Meteorological Service was called upon to provide the weather service for the Trans-Canada Airways. This required the establishment of forecast centres at the main terminals and provision of meteorological equipment at all the radio range stations from which observations could be obtained throughout the whole twenty-four hours, seven days a week. This necessitated the recruiting of a large forecasting and sub-technical staff, as well as the organization of rapid communication by teletype connecting all the radio range stations and terminals along the airlines. The teletype service permits the transmission of hourly weather reports throughout the twenty-four hours and additional reports when weather conditions are changing rapidly. Thus, the forecasters at the various centres are kept in constant touch with all weather changes taking place along the route. It is the duty of the forecaster to issue regular forecasts for the airlines and to keep their personnel informed of important changes taking place in the weather or in the forecasts.

The service was first established between Vancouver and Winnipeg in 1938 and extended to Montreal by 1939 just before war broke out and was put through to the Maritime Provinces shortly afterwards. There are now seven forecasting centres from Vancouver to Moncton providing the airlines with weather information and forecasts.

**Meteorological Service for the Armed Forces.**—While weather has always played a very important part in war operations, in the War of 1914-18 North America was not affected and, throughout that period, the Meteorological Service of Canada carried on its usual activities. During the present war, however, with the great development of aviation and communications, weather has become a most vital factor in aerial warfare. Since it was important that, so far as possible, weather information should be denied to the enemy but at the same time made available for the United Nations, one of the first acts was to suppress all broadcasts in clear of weather information in Canada. This, however, was not completely effective until the United States entered the War, when broadcasts in clear of weather information were suppressed over the whole continent.

Soon after the outbreak of war, the R.C.A.F. and Naval authorities of the Eastern Air Command requested a forecast centre at Halifax to advise the personnel concerning operations being carried on from there. This was immediately organized and shortly afterwards a similar organization was set up on the West Coast at Victoria, later transferred to Vancouver.

Forecasting service is now provided to all the operational units of the R.C.A.F. and Naval authorities in Newfoundland and on the Atlantic and Pacific Coasts. One very important duty of the forecaster is to discuss with the operational personnel meteorological situations and expected developments, and to brief the pilots before they set out on their patrols or navigation exercises. In this case, the weather situation likely to be encountered is very fully explained by means of blackboard sketches and the men are provided with forecasts and maps showing the weather conditions prevailing on the route.

**Weather Service for the British Commonwealth Air Training Plan.**—With the inauguration of the Plan in 1940, the Meteorological Service was asked to provide Instructors and Assistant Forecasters at the schools, in order to give the students the basic principles of practical meteorology that would be of most use

to them in their operations. At first there was only one Meteorological Officer assigned to a school who acted both as Instructor and Assistant Forecaster. However, with the rapid development of the Plan, the number of Meteorological Officers increased rapidly until now there are from three to six attached to each school to give lectures and provide a twenty-four hour service, when necessary, for operations.

To provide this greatly increased staff, it was necessary to recruit large numbers of university graduates with sufficient mathematics and physics and give them an intensive fourteen-week course in Meteorology, which qualified them as Instructors and Assistant Forecasters. A further intensive course of three months was also given to those with the necessary qualifications so that they could become independent forecasters at the operational units of the R.C.A.F.

Weather reports from the surrounding country are a prime requisite at each school so that the weather conditions over the region in which training and flying is taking place is known. For this purpose, all the schools have been connected into the main teletype circuits stretching from Vancouver to Halifax, thus making available all the hourly weather reports, forecasts, etc., passing over the circuits. The basic forecasts for the schools are issued from the airline centres; the Meteorological Officers at the schools take these and modify them, if necessary, for local conditions for the benefit of the training personnel. Pilots are briefed before they set out on their exercises along the same lines as when pilots on active service are briefed for operations.

**Weather Stations in Northern Canada.**—The United States entry into the War and the development of the Northwest Staging Route from Edmonton to the Alaskan Boundary, as well as the developments in Eastern Canada and Labrador, made it necessary to establish many observing posts throughout all of Northern Canada, in order to provide weather data to safeguard the air routes. This has meant co-operation with the Radio Division of the Department of Transport to provide the necessary radio-transmitting facilities at these observation posts.

**Post-War Period.**—Since the beginning of the organization of an aviation service, the Meteorological Service has increased at least tenfold to meet all the civil and military demands made on it. As Canada occupies a strategic position, it is certain in the post-war period that the Meteorological Service will have to be maintained on a very large scale, in order to provide weather service for all national and international aviation.

## PART II.—CHRONOLOGY

NOTE.—Events in the General Chronology from 1497 to 1866 are given at pp. 25-30 of the 1940 Canada Year Book.

The Ministries and the dates of elections and lengths of sessions of all Dominion Parliaments following Confederation are given in Tables 2 and 4, respectively, of Chapter III. Changes in Provincial Legislatures and Ministries from Confederation to 1923 are given at pp. 75-84 of the 1924 Year Book, and from 1924 to 1937 at pp. 110-118 of the 1938 Year Book. References regarding these matters have therefore been dropped from the Chronology below. Changes since 1937 are included.

- |   |   |
|---|---|
| <p>1867. Mar. 29, Royal Assent given to the British North America Act. July 1, The Act came into force; Union of the Provinces of Canada, Nova Scotia and New Brunswick as the Dominion of Canada; Upper and Lower Canada made separate provinces named Ontario and Quebec; Viscount Monck, first Governor General; Sir John A. Macdonald, Prime Minister. Nov. 6, Meeting of the first Dominion Parliament.</p> <p>1868. Apr. 7, Murder of D'Arcy McGee at Ottawa. July 31, The Rupert's Land Act authorized the acquisition by the Dominion of the Northwest Territories.</p> <p>1869. June 22, Act providing for the government of the Northwest Territories. Nov. 19, Deed of surrender to the Crown of the Hudson's Bay Company's territorial rights in the Northwest. Outbreak of the Red River Rebellion under Riel.</p> | <p>1870. May 12, Act to establish the Province of Manitoba. July 15, Northwest Territories transferred to the Dominion and Manitoba admitted into Confederation. Aug. 24, Wolseley's expedition reached Fort Garry (Winnipeg); end of the rebellion.</p> <p>1871. Apr. 2, First Dominion Census (population 3,689,257). Apr. 14, Act establishing uniform currency in the Dominion. May 8, Treaty of Washington, dealing with questions outstanding between the United Kingdom and the United States. July 20, British Columbia entered Confederation.</p> <p>1873. May 23, Act establishing the North West Mounted Police. July 1, Prince Edward Island entered Confederation. Nov. 8, Incorporation of Winnipeg.</p> <p>1874. May, Ontario Agricultural College Guelph, opened.</p> |
|---|---|

875. Apr. 8, The Northwest Territories Act established a Lieutenant-Governor and a Northwest Territories Council. April-May, Letting of first contract and commencement of work upon the Canadian Pacific railway as a Government line; work commenced at Fort William. June 15, Formation of the Presbyterian Church in Canada.
876. June 1, Opening of the Royal Military College, Kingston. June 5, First sitting of the Supreme Court of Canada. July 3, Opening of the Intercolonial Railway from Quebec to Halifax. Branch of Laval University established at Montreal.
877. June 20, Great fire at Saint John, N.B. October, First exportation of wheat from Manitoba to the United Kingdom. Founding of the University of Manitoba.
878. July 1, Canada joined the International Postal Union.
879. May 15, Adoption of a protective tariff ("The National Policy").
880. Royal Canadian Academy of Arts founded; first meeting and exhibition, Mar. 6. May 11, Sir A. T. Galt appointed first Canadian High Commissioner in London. Sept. 1, All British possessions in North America and adjacent islands except Newfoundland and its dependencies annexed to Canada by Imperial Order in Council of July 31. Oct. 21, Signing of the contract with the present Canadian Pacific Railway Co. for the completion of the Canadian Pacific Railway.
881. Apr. 4, Second Dominion Census (population 4,324,810). May 2, First sod of the Canadian Pacific Railway as a company line turned.
882. May 8, Provisional District of Assiniboia, Saskatchewan, Athabaska and Alberta formed. May 25, First meeting of the Royal Society of Canada. Aug. 23, Regina established as seat of government of the Northwest Territories.
883. Sept. 5, Formation of the Methodist Church in Canada; united conference.
884. May 24, Sir Charles Tupper, High Commissioner in London. Aug. 11, Order in Council settling the boundary of Ontario and Manitoba.
885. Mar. 26, Outbreak of Riel's second rebellion in the Northwest. Apr. 24, Engagement at Fish Creek. May 2, Engagement at Cut Knife. May 12, Taking of Batoche. May 16, Surrender of Riel. Aug. 24, First census of the Northwest Territories.
- Nov. 7, Last spike of Canadian Pacific Railway main line driven at Craigellachie. Nov. 16, Execution of Riel.
1886. Apr. 6, Incorporation of Vancouver. June 7, Archbishop Taschereau of Quebec made first Canadian Cardinal. June 13, Vancouver destroyed by fire. June 28, First through train of the Canadian Pacific Railway left Montreal for Port Moody. July 31, First quinquennial census of Manitoba.
1887. Interprovincial Conference at Quebec. Apr. 4, First Colonial Conference at London.
1888. Feb. 15, Signing of Fishery Treaty between United Kingdom and United States at Washington. August, Rejection of Fishery Treaty by United States Senate.
1890. Mar. 31, The Manitoba School Act abolished separate schools.
1891. Apr. 5, Third Dominion Census (population 4,833,239). June 6, Death of Sir John A. Macdonald.
1892. Feb. 29, Washington Treaty, providing for arbitration of the Bering Sea Seal Fisheries question. July 22, Boundary Convention between Canada and United States.
1893. Apr. 4, First sitting of the Bering Sea Arbitration Court. Dec. 18, Archbishop Machray, of Rupert's Land, elected first Anglican Primate of all Canada.
1894. June 28, Second Colonial Conference at Ottawa. Dec. 12, Death of Sir John Thompson at Windsor Castle.
1895. Sept. 10, Opening of new Sault Ste. Marie Canal.
1896. Apr. 24, Sir Donald Smith (Lord Strathcona) High Commissioner in London. August, Gold discovered in the Klondyke.
1897. June 22, Celebration throughout the Empire of the Diamond Jubilee of H.M. Queen Victoria. July, Third Colonial Conference at London. Dec. 17, Award of the Bering Sea Arbitration Court.
1898. June 13, The Yukon District established as a separate Territory. Aug. 1, The British Preferential Tariff went into force. Aug. 23, Meeting at Quebec of the Joint High Commission between Canada and the United States. Dec. 25, British Imperial penny (2 cent) postage introduced.
1899. Oct. 1, Mgr. Diomède Falconio arrived at Quebec as first permanent Apostolic Delegate to Canada. Oct. 11, Beginning of the South African War. Oct. 29, First Canadian Contingent left Quebec for South Africa.

1900. Feb. 27, Battle of Paardeberg. Apr. 26, Great fire at Ottawa and Hull.
1901. Jan. 22, Death of Queen Victoria and accession of King Edward VII. Apr. 1, Fourth Dominion Census (population 5,371,315). Sept. 16-Oct. 21, Visit to Canada of the Duke and Duchess of Cornwall and York (King George V and Queen Mary).
1902. May 31, End of South African War; peace signed at Vereeniging. June 30, Meeting of Fourth Colonial Conference at London. Aug. 9, Coronation of H. M. King Edward VII. December, First message sent by wireless from Canada to the United Kingdom via Cape Breton, N.S.
1903. Jan. 24, Signing of the Alaskan Boundary Convention. June 19, Incorporation of Regina. Oct. 20, Award of the Alaskan Boundary Commission.
1904. Feb. 1, Dominion Railway Commission established. Apr. 19, Great fire at Toronto. Oct. 8, Incorporation of Edmonton.
1905. Sept. 1, Creation of the Provinces of Alberta and Saskatchewan.
1906. Roald Amundsen, in the schooner *Gjoa*, arrived at Nome, Alaska, on completion of the first traverse of the North-West Passage. University of Alberta founded. Oct. 8, Interprovincial Conference at Ottawa.
1907. Apr. 15-May 14, Fifth Colonial Conference at London. Oct. 17, Transatlantic wireless open for limited public service. University of Saskatchewan founded. Dec. 6, First recorded flight in Canada of a heavier-than-air machine carrying a passenger (Dr. Graham Bell's tetrahedral kite, *Cygnét*).
1908. University of British Columbia founded. Jan. 2, Establishment of Ottawa Branch of Royal Mint. June 21-23, Bicentenary of Bishop Laval celebrated at Quebec. July 20-31, Quebec tercentenary celebrations. Visit of Prince of Wales to Quebec. Aug. 2, Great fire in Kootenay Valley, B.C.
1909. Jan. 11, Signing of International Boundary Waters Convention between Canada and United States. Feb. 23, First flight in Canada of a heavier-than-air machine under its own power (McCurdy's *Silver Dart*).
1910. May 6, Death of King Edward VII and accession of King George V. Sept. 7, North Atlantic Coast Fisheries Arbitration Award of The Hague Tribunal. New trade agreements made with Germany, Belgium, Holland and Italy. Oct. 11, Inauguration at Kitchener of Ontario hydro-electric power transmission system.
1911. May 23-June 20, Imperial Conference at London. June 1, Fifth Dominion Census (population 7,206,643). June 22, Coronation of H. M. King George V. July 11, Disastrous fires in Porcupine district.
1912. Mar. 29-Apr. 9, First Canada-West Indies Trade Conference held at Ottawa. Apr. 15, Loss of the steamship *Titanic*. Appointment of Dominions Royal Commission. May 15, Extension of the boundaries of Quebec, Ontario and Manitoba.
1914. May 20, Loss of the steamship *Empress of Ireland*. Aug. 4, War with Germany; Aug. 12, with Austria-Hungary; Nov. 5, with Turkey. Aug. 18-22, Special war session of Canadian Parliament. Oct. 16, First Canadian Contingent of over 33,000 troops landed at Plymouth, England.
1915. February, First Canadian Contingent landed in France and proceeded to Flanders. Apr. 22, Second Battle of Ypres. Apr. 24, Battle of St. Julien. May 20-26, Battle of Festubert. June 15, Battle of Givenchy.
1916. Jan. 12, Order in Council authorizing increase in number of Canadian troops to 500,000. Feb. 3, Destruction by fire of the Houses of Parliament at Ottawa. Apr. 3-20, Battle of St. Eloi. June 1, Census of Prairie Provinces. June 1-3, Battle of Sanctuary Wood. July 1, Commencement of the Battle of the Somme. Sept. 1, Corner-stone of new Houses of Parliament laid by Duke of Connaught.
1917. Feb. 12-May 15, Imperial Conference. Mar. 20-May 2, Meetings at London of Imperial War Cabinet. Mar. 21-Apr. 27, Imperial War Conference. Apr. 6, United States declared war against Germany. Apr. 9, Capture of Vimy Ridge. Aug. 15, Battle of Loos, capture of Hill 70. Aug. 29, Passing of Military Service Act. Sept. 20, Completion of Quebec Bridge. Parliamentary franchise extended to women. Oct. 26-Nov. 10, Battle of Passchendaele. Dec. 6, Serious explosion at Halifax, N.S.
1918. Mar. 31, Germans launched critical offensive on West Front. March-April, Second Battle of the Somme. Apr. 17, Secret session of Parliament. June-July, Prime Minister and colleagues attended Imperial War Conference at London. July 18, Allies assumed successful offensive

on West Front. Aug. 12, Battle of Amiens. Aug. 26-28, Capture of Monchy le Preux. Sept. 2-4, Breaking of Drocourt-Quéant line. Sept. 16, Austrian peace note. Sept. 27-29, Capture of Bourlon Wood. Sept. 30, Bulgaria surrendered and signed armistice. Oct. 1-9, Capture of Cambrai. Oct. 6, First German peace note. Oct. 20, Capture of Denain. Oct. 25-Nov. 2, Capture of Valenciennes. Oct. 31, Turkey surrendered and signed armistice. Nov. 4, Austria-Hungary surrendered and signed armistice. Nov. 11, Capture of Mons. Germany surrendered and signed armistice.

1919. Feb. 17, Death of Sir Wilfrid Laurier. May 1-June 15, General strike at Winnipeg and other western cities. June 28, Signing at Versailles of Peace Treaty and Protocol. Aug. 15, Arrival of the Prince of Wales for official tour in Canada. Aug. 22, Formal opening of Quebec Bridge by the Prince of Wales. Sept. 1, The Prince of Wales laid foundation stone of Peace Tower, Parliament Buildings, Ottawa. Sept. 1-Nov. 10, Special peace session, thirteenth Parliament of Canada. Dec. 20, Organization of "Canadian National Railways" by Order in Council.

1920. Jan. 10, Ratifications of the Treaty of Versailles. Feb. 19, Shareholders ratified agreement for sale of the Grand Trunk Railway to the Dominion Government. May 31-June 18, Trade Conference at Ottawa between Dominion and West Indian Governments. July 16, Ratifications of the Treaty of St. Germain-en-Laye. Aug. 9, Ratifications of the Treaty of Neuilly-sur-Seine. Nov. 15, First meeting of League of Nations Assembly began at Geneva, Switzerland.

1921. May 10, Preferential tariff arrangement with British West Indies became effective. June 1, Sixth Dominion Census (population 8,787,949). June 20-Aug. 5, Imperial Conference. Nov. 11, Opening of Conference on Limitation of Armament at Washington.

1922. Feb. 1, Arms Conference at Washington approved five-power treaty, limiting capital ships, and disapproving unrestricted submarine warfare and use of poison gas. Apr. 10, General Economic Conference opened at Genoa. July 13, Conference between Canada and the United States *re* perpetuating the Rush-Bagot Treaty regarding armament on the Great Lakes.

Aug. 7, Allies' Conference on war debts and reparations opened at London. Oct. 10, Mudania Armistice signed by Britain, France and Turkey. Dec. 9, Reparations Conference opened at London.

1923. Apr. 1, Removal of British embargo on Canadian cattle effective. Oct. 1, Imperial Conference and Economic Conference at London.

1924. Apr. 23, British Empire Exhibition opened by King George V at Wembley, England, with the Prince of Wales as President. Aug. 6-16, Meeting of the British Association for the Advancement of Science at Toronto. Aug. 11-16, Meeting of International Mathematical Congress at Toronto.

1925. June 10, Inauguration of the United Church of Canada. Nov. 20, Death of Queen Alexandra.

1926. June 1, Census of Prairie Provinces. Oct. 19-Nov. 23, Imperial Conference at London. Nov. 26, Hon. C. Vincent Massey appointed Envoy Extraordinary and Minister Plenipotentiary to the United States.

1927. June 1, Hon. Wm. Phillips, first U.S. Minister to Canada, reached Ottawa. July 1-3, Diamond Jubilee of Confederation celebrated throughout the Dominion. July 30, The Prince of Wales, Prince George, the Rt. Hon. Stanley Baldwin and party, arrived at Quebec on a visit to Canada. September, Canada elected as a non-permanent member of the Council of the League of Nations at Geneva. November, Dominion-Provincial Conference on the relations between the Dominion and the provinces.

1928. Apr. 25, Sir Wm. H. Clark appointed first British High Commissioner to Canada. May 31, Legislative Council of Nova Scotia ceased to exist, leaving Quebec the only province with a bi-cameral legislature. July 20, Japanese Legation opened at Ottawa. Nov. 15, First French Minister to Canada arrived at Ottawa.

1929. Oct. 15-25, The Rt. Hon. J. Ramsay MacDonald, Prime Minister of the United Kingdom, visited Canada. Dec. 14, Transfer of natural resources to Manitoba and Alberta.

1930. Jan. 21, Five-power Naval Arms Conference opened at London; Canada represented by Hon. J. L. Ralston. Feb. 20, Transfer of natural resources to British Columbia. Mar. 20, Transfer of natural resources to Saskat-

NOTE.—For references regarding Dominion Government changes, and Provincial Government changes prior to 1937, see Note on p. 30.

- chewan. Aug. 1, H. M. Airship R-100 arrived at Montreal, being the first transatlantic lighter-than-air craft to reach Canada. Oct. 1, Imperial Conference at London.
1931. June 1, Seventh Dominion Census (population 10,376,786). June 30, The Statute of Westminster exempting the Dominion and the provinces from the operation of the Colonial Laws Validity Act and the Merchant Shipping Act approved by the House of Commons. Sept. 21, United Kingdom suspended specie payments, following which Canada restricted the export of gold. The Government of the Dominion of Canada was established under the provisions of the British North America Act of 1867.\* This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this chapter describe in some detail the processes by which the Constitution has developed and the institutions, as at present constituted, by which Canada is governed.

The several stages in the development of the status of the Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926, which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number

\* See pp. 49-60 of the 1942 Year Book for text of the original B.N.A. Act and notes regarding amendments and modifications thereto.

of foreign countries have characterized this phase in the growth of the Dominion of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

## **PART I.—THE CONSTITUTION AND GENERAL GOVERNMENT OF CANADA**

The Dominion of Canada is the largest in area and the most populous of the great self-governing Dominions of the British Empire, which also include the Commonwealth of Australia, the Union of South Africa, the Dominion of New Zealand, Southern Rhodesia and the island colony of Newfoundland (with Labrador). Because of the inability of the Government of Newfoundland to meet the interest charges upon its obligations, the constitution of that colony was suspended in 1934 on the petition of the Legislature. The island is now administered by six Commissioners appointed by the Crown, three from Newfoundland and three from the United Kingdom. For the present there is no Legislative Council and no House of Assembly. These Dominions enjoy responsible government of the British type, administered by Executive Councils (or Cabinets) acting as advisers to the representative of the Sovereign, themselves responsible to and possessing the confidence of the representatives elected to Parliament by the people, and giving place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist.

Of these Dominions, Canada, Australia and South Africa extend over enormous areas of territory, the first two approximating Europe in area. Each section has its own problems and its own point of view, so that local Parliaments for each section, as well as the central Parliament for the whole country, are required. The local Parliaments, established when transportation and communications were more difficult and expensive than at present, were chronologically prior to the central body, to which on its formation they either resigned certain powers, as in the case of Australia, or surrendered all their powers with certain specified exceptions, as in Canada and South Africa. Of such local Parliaments, Canada at the present time has nine, Australia six and South Africa four.

Besides the Dominions above enumerated, the great Empire of India in its internal administration has been placed on the road, formerly traversed by the Dominions that are now fully self-governing, towards responsible government. Indeed, the whole evolution of the Empire, throughout all parts that are more than mere fortresses or trading stations, is in the direction of responsible government, to be attained in the dependencies as it has been in what used to be called the Colonies, by the gradual extension of self-government in proportion to the growing capacities of their respective populations. It has been and is the recognized aim of British administrators, by the extension of educational facilities and by just administration, to develop these capacities to the utmost.

### **Section 1.—The Evolution of the Constitution of Canada Down to Confederation**

The process of the development of free government in the Dominion of Canada down to Confederation is given in an article appearing at pp. 34-40 of the 1942 Year Book. Also in an Appendix to that article, pp. 40-60, the text of the British North America Act is presented.

## Provincial Coats-of-Arms and Emblems

(The Provinces are listed in order of their entrance into Confederation)

### ONTARIO

Granted by Royal Warrant dated May 26, 1868. Crest and Supporters granted by Royal Warrant dated Feb. 27, 1909.

*Description.*—"Vert a Sprig of three leaves of Maple slipped Or, on a Chief Argent the Cross of St. George."

*Crest.*—"Upon a Wreath of the Colours a Bear passant Sable, and the Supporters on the dexter side A Moose, and on the sinister side A Canadian Deer, Both Proper."

*Motto.*—"Ut Incepit Fidelis Sic Permanet" (Loyal in the beginning, so it remained).

*Floral Emblem.*—White Trillium (c. 26, 1937).

### QUEBEC

Adopted by Provincial Order in Council of Dec. 9, 1939.

Granted by Royal Warrant dated Mar. 31, 1906.

*Description.*—"Argent three Bars wavy Azure issuant from the base of a demi-Sun in splendour proper, on a Chief of the Union Device charged in the centre Point with an Antique Crown Or." The Crest and Supporters (dexter an Elk and sinister a Mountain Sheep, both proper) have become part of the Provincial Achievement through usage.

*Motto.*—"Splendor sine occasu" (Splendour without diminishment).

## Provincial Coats-of-Arms and Emblems—Concluded

### PRINCE EDWARD ISLAND

Granted by Royal Warrant dated May 30, 1905.

*Description.*—"Argent on an Island Vert, to the Sinister an Oak Tree fructed, to the Dexter thereof three oak Saplings Sprouting all Proper, on a Chief Gules a Lion passant guardant Or."

*Motto.*—"Parva sub ingenti" (The small under [the protection of] the great).

### SASKATCHEWAN

Granted by Royal Warrant dated Aug. 25, 1906.

*Description.*—"Vert three Garbs in fesse Or, on a Chief of the last a Lion passant guardant Gules."

*Floral Emblem.*—Prairie Lily (c. 8, 1941).

### ALBERTA

Granted by Royal Warrant dated May 30, 1907.

*Description.*—"Azure in front of a Range of Snow Mountains proper, a Range of Hills Vert, in base a Wheat-field surmounted by a Prairie both also proper, on a Chief Argent a St. George's Cross."

*Floral Emblem.*—Wild Rose (c. 38, 1930).

## GLOSSARY

Argent—silver  
Armed—with beak, talons, etc.  
Azure—blue  
Charge—device on shield  
Chief—band in top of shield  
Crined—Maned  
Crosse patee—a special form of cross  
Fesse—horizontal band across shield  
Garb—sheaf of wheat  
Gorged—bearing on the throat  
Guardant—looking full face at the spectator  
Gules—red  
Langued—tongued  
Or—gold  
Pasant—walking  
Proper—in natural colour  
Rampant—leaping  
Sable—black  
Statant—standing  
Tierced—divided into three parts  
Vert—green

## Section 2.—Development of the Constitution Since Confederation

As stated at p. 61 of the 1942 Canada Year Book, it was the intention to publish in the 1943 edition of the Year Book a companion article to that which appeared at pp. 34-60 of the 1942 edition, and which would deal with constitutional developments since Confederation. On grounds of economy, a 1943 edition of the Year Book was not published and, in consequence, the present edition has to include a vast quantity of data concerning economic developments over two important years when change has been extraordinarily rapid. Pressure on space is so great that some modification of the original plan is necessary.

Under the caption "Evolution of the National Constitution Since Confederation", the 1922-23 Year Book deals at pp. 94-100 with the development of Canada's position in the British Commonwealth of Nations to that date. Space has been saved by carrying the material forward from that date rather than by recasting the original article. Major constitutional developments have taken place in the past two decades and, by restricting the present article mainly to these features, it has been possible to give the facts in greater detail.

However, in order to make the earlier material available to interested readers, the previously published articles dealing with the evolution of the Constitution have been reprinted and a copy may be obtained free of charge by purchasers of the 1943-44 Year Book on application to the Dominion Statistician.

### CANADA'S PRESENT STATUS IN THE BRITISH COMMONWEALTH OF NATIONS\*

The period covered by this article may be regarded, for convenience, as commencing with Canada's participation, in 1920, in the first meeting of the League of Nations Assembly, to full membership in which the Dominions had been admitted in 1919. For that momentous step the way had been paved by the adoption at the Imperial War Conference of 1917, of Resolution IX, a conspicuous milestone on the way to nationhood of the Dominions. Forcefully advocated by the Prime Ministers of Canada and South Africa, and unanimously endorsed by the Conference, Resolution IX read as follows:—

"The Imperial War Conference are of opinion that the readjustment of the constitutional relations of the component parts of the Empire is too important and intricate a subject to be dealt with during the War, and that it should form the subject of a special Imperial Conference to be summoned as soon as possible after the cessation of hostilities.

"They deem it their duty, however, to place on record their view that any such readjustment, while thoroughly preserving all existing powers of self-government and complete control, of domestic affairs, should be based upon a full recognition of the Dominions as autonomous nations of an Imperial Commonwealth, and of India as an important portion of the same, should recognize the right of the Dominions and India to an adequate voice in foreign policy and in foreign relations, and should provide effective arrangements for continuous consultation in all important matters of common Imperial concern, and for such necessary concerted action, founded on consultation, as the several Governments may determine."

Facilities for such consultation were readily available in the establishment of the Imperial War Cabinet to which the Prime Minister of each Dominion was accorded the right to nominate a Cabinet Minister to represent him, each Prime Minister having also the right to communicate directly with the Prime Minister of the United Kingdom as occasion might require.

Just before the Armistice that terminated the War of 1914-18, the Canadian Prime Minister, on Oct. 29, 1918, raised the question of the Dominions' participation in the Peace Conference. Much opposition had to be overcome in many quarters, but finally adequate representation in the British Empire Delegation was conceded and with the forceful but silent testimony of the Dominions' part in the winning

\* Prepared in the Department of the Secretary of State, Ottawa, by W. P. J. O'Meara, K.C., B.A., Assistant Under Secretary of State.

of the war as a persuasive factor, the Supreme Council of the Five Great Powers, after some opposition, yielded to the insistent demand. Not only was each of the Dominions represented by one or more delegates, but in the Treaty of Peace a provision was inserted whereby the Dominion representatives were accorded the right to sign separately on behalf of their respective Governments and each Dominion Parliament was recognized as having the right to review the Treaty, precisely as had each of the other contracting parties. This was the first political treaty to contain such provisos. The initiative in securing support of the proposal was taken by the then Prime Minister of Canada, the late Sir Robert Borden.

Having achieved the right of a seat in the Assembly, Canada aspired to membership on the League Council, with respect to which further difficulty was encountered. An official interpretation of Article IV of the Covenant, dated May 6, 1919, removed that obstacle, whereupon it was found that the draft Constitution of the New International Labour Organization, sponsored by the League, excluded the Dominions from representation on the Governing Body. Again, Sir Robert Borden vigorously pressed the demands of Canada and her sister Dominions with final success.

This hard-won status was not maintained without difficulty. The Washington Conference on the Limitation of Armament, 1921, afforded an example. The Dominions were not invited by the Government of the United States to participate, but Great Britain, on receiving an invitation, afforded the Dominions an opportunity to nominate members of the British delegation who might possess expert knowledge of local Dominion problems. Under protest the Dominions acquiesced. By mutual agreement ratification of the resultant treaties was made subject to the consent of the Dominions separately.

That Canada was jealous of her status within the Empire was made very clear in the official correspondence in 1922 where, a revolutionary army in Turkey seeming to threaten Constantinople and Chanak, Great Britain inquired of the Dominions whether, in the event of war, they would send armed forces to the battle front. A difficult situation resulted from a premature release to the British press of the "invitation" to the Dominions. The Canadian Prime Minister took the position that:—

"....before it was possible to have the contents of the cable which had come from London communicated to myself or other members of the Government the press of Canada carried dispatches from Great Britain announcing an invitation by the British Government to Canada to participate in resistance of Turkish forces by sending a contingent. I pointed out that a most embarrassing situation had arisen in consequence, that I was being asked by press representatives if any communication, and if so what communications, had been received from the British Government. As the message from Great Britain had been marked secret and was in cipher, I was not at liberty to disclose its contents. . . . It is the view of the Government that public opinion in Canada would demand authorization on the part of Parliament as a necessary preliminary to the dispatch of any contingent to participate in the conflict in the Near East. The Government is in communication with members of the cabinet at present in Europe as Canada's representatives at the League of Nations, and with the British Government, with a view to ascertaining whether the situation that exists in the Near East is one which would justify the summoning of a special session of Parliament."

The crisis passed, but Canada had made clear its conception of its new status within the Commonwealth. South Africa and Australia similarly protested against not having been consulted earlier with respect to an impending crisis.

At about this time, two illuminating situations developed: one concerning the Halibut Fisheries Treaty regulating fisheries on the Pacific Coast of Canada and the United States, and the other in connection with the Treaty of Lausanne. Canada maintained with respect to the Halibut Treaty that the Canadian representative alone should sign, since the subject matter concerned Canada, and not the Empire

is a whole. With respect to Lausanne, the Canadian Government maintained that as Canada had not participated in the negotiation of the Treaty, and was not a signatory to it, Parliament ought not to be asked to approve it.

The Prime Minister stated in Parliament (Can. H. of C. Debates, June 9, 1924, p. 2936):—

"I believe that the future of this Dominion will be happiest and best, most prosperous, and in every way most to the good, if its development is . . . towards a fuller recognition of national status within the community of free nations which comprise the British Empire; and it is because I hold that view, it is because I believe in it so strongly, that, in this particular matter, I have been prepared to risk whatever in the way of misunderstanding and criticism and censure might come from those who have not had a full knowledge or appreciation of the significance of the facts. I have been taking my stand from the point of view of Canada a nation within the British Empire, not Canada a colony, not Canada in any inferior or subordinate position, but Canada a country which has gained and which merits equality of status with other Dominions and with the Mother Country in these inter-Imperial relations."

**Power to Negotiate Treaties.**—The right of Canada to negotiate treaties with foreign countries has developed steadily almost from the time of Confederation. At that time the accepted constitutional principle was that all treaties with foreign countries were negotiated by the British Government and automatically applied to Canada as well as to all other parts of the British Empire. Separate treaties might, however, be negotiated by the Imperial Government on behalf of particular parts of the Empire, as in the case of the Reciprocity Treaty of 1854 with the United States which applied only to British North American colonies. In 1871 an important step was taken in associating Canada in the negotiation of an imperial treaty, which directly involved Canadian interests, by the appointment of the Prime Minister of Canada, Sir John A. Macdonald, as one of the British Commissioners to the conference that resulted in the Treaty of Washington. In 1874, Honourable George Brown was associated with the British Minister at Washington for the purpose of negotiating a commercial treaty between Canada and the United States. In 1878, Sir A. T. Galt, later High Commissioner, was sent on a special mission to undertake negotiations for commercial arrangement with France and Spain, but these negotiations were to be conducted formally by the British Ambassador. In 1884 the High Commissioner for Canada, Sir Charles Tupper, was given full powers to conduct negotiations for a commercial treaty with Spain in conjunction with the British Ambassador, the convention to be signed by both plenipotentiaries. In 1897, at the insistence of Canada, the British Government repudiated commercial treaties with Germany and Belgium in so far as they applied to Canada. In 1907 a commercial treaty with France was negotiated entirely by the Canadian representatives, Mr. Fielding and Mr. Brodeur, the British official signing as a mere formality. In 1911 negotiations for reciprocity with the United States were carried on directly between the Government of Canada and the Government of the United States without the formality of appointing Canadian representatives as plenipotentiaries, although the agreement reached was in reality an inter-governmental agreement rather than a formal treaty.

While it was thus established prior to the War of 1914-18 that commercial and economic agreements affecting Canada should be negotiated by Canadian rather than by British representatives, the same progress had not been achieved with respect to political treaties. It was only after making strong representations that Canada was accorded the right to be represented in the negotiation of the peace treaties, and to sign and ratify them separately, plenipotentiaries in respect of Canada being appointed by the King on the advice of the Canadian Privy Council. Even then, the Treaty of Versailles and other treaties of peace agreed to at the Peace

Conference were signed by the British plenipotentiaries for the Empire as a whole, while Canadian plenipotentiaries signed for "Canada" only. Canada would thus appear to have been doubly bound. On the other hand, the Canadian Government insisted that the Treaty be ratified on behalf of Canada only after it had been approved by the Canadian Parliament. A further step occurred when the Pacific Halibut Treaty with the United States was negotiated with the United States by the Honourable Ernest Lapointe and signed by him alone. Since then the constitutional right of Canada to negotiate, sign, and have treaties ratified on her own responsibility has been unquestioned. While formal treaties still require action by the King personally, both in the appointment of plenipotentiaries and ratification of treaties, the King acts on the advice of his Canadian Ministers with respect to treaties applying to Canada.

**The Development of Equality of Dominion Status.**—In 1923, an Imperial Conference took place, at which the new status of the Dominions was recognized in the decision that thenceforth each Dominion was to be free to negotiate, sign and ratify treaties with foreign powers, whether on political or commercial subjects. When in 1925 the Locarno Treaty was negotiated, a clause was inserted excluding the Dominions from its application unless and until their respective Governments formally brought themselves within its scope. Thus, Canada's contentions with respect to both the Halibut Treaty and the Treaty of Lausanne bore fruit.

The next Imperial Conference was held in 1926, soon after the controversy in Canada resultant from the rejection by Lord Byng, then Governor General, of Prime Minister King's recommendation of dissolution of Parliament, followed a few days later by His Excellency's acceptance of a similar recommendation from Mr. Arthur Meighen who had been called upon to form a government when Mr. King resigned, his advice having been rejected. In the ensuing general election Mr. King was given a decisive vote of approval by the electorate. The incident, which was the subject of wide-spread comment, undoubtedly loomed large in the minds of the delegates to the Conference. Accordingly, it is not surprising to find in the Report of that Conference the principle enunciated that:—

"It is an essential consequence of the equality of status existing among the members of the British Commonwealth of Nations that the Governor General of a Dominion is the representative of the Crown holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain, and that he is not the representative or agent of His Majesty's Government in Great Britain or of any department of that Government."

The Imperial Conference of 1930 took the further logical step of agreeing on the following propositions:—

- "1. The parties interested in the appointment of a Governor General of a Dominion are His Majesty the King, whose representative he is, and the Dominion concerned.
- "2. The constitutional practice that His Majesty acts on the advice of responsible ministers applies also in this case.
- "3. The ministers who tender and are responsible for such advice are His Majesty's Ministers in the Dominion concerned.
- "4. The ministers concerned tender their formal advice after informal consultation with His Majesty.
- "5. The channel of communication between His Majesty and the Government of any Dominion is a matter solely concerning His Majesty and such Government. His Majesty's Government in the United Kingdom have expressed their willingness to continue to act in relation to any of His Majesty's Governments in any manner in which that Government may desire.
- "6. The manner in which the instrument containing the Governor-General's appointment should reflect the principles set forth above is a matter in regard to which His Majesty is advised by His Ministers in the Dominion concerned."

In the following year the Letters Patent constituting the office of Governor General and Commander-in-Chief of the Dominion of Canada were revised. A new Patent was issued under the Great Seal of the Realm. At the same time new and revised Instructions to the Governor General were passed under the Royal Sign Manual, on the recommendation of the Prime Minister of Canada. These new instructions omitted the earlier reference to instructions from the Privy Council (Imperial) or one of the Principal Secretaries of State. Moreover, instead of the earlier provision whereby the Governor General sought permission from the King under his Sign Manual and Signet or through one of the Principal Secretaries of State to absent himself from Canada, the new Instructions provide for grant of such permission by the King under his Sign Manual and Signet or through the Prime Minister of Canada.

The same Imperial Conference defined the status of the Dominions within the Commonwealth as follows:—

"They are autonomous Communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations."

At the same time the Conference formally adopted the principle, already tacitly accepted, as noted above, that no self-governing Dominion is to be bound by the provisions of any treaty in the making of which it has not participated. Each treaty is to state clearly to what parts of the Empire it is to apply; the King makes the treaty on behalf of such parts of the Empire as are specifically named.

The new status of the Dominions thus enunciated has been internationally recognized on many occasions, notably in invitations from the United States to subscribe to the Kellogg Pact for the Renunciation of War and in the organization of the Permanent Court of International Justice.

**The Statute of Westminster and Confirmation of Equality of Status.**—Equality of status having been achieved, there remained only the final step of establishing unequivocally in law what had become recognized as definite fact. This last step was taken in the enactment of the Statute of Westminster, 1931, following the recommendation of the Imperial Conference of 1930, and after each of the Dominions had given its specific approval not alone to the substance of the Draft Bill, but to each of its specific provisions. The Act made the Colonial Laws Validity Act no longer applicable to any law made by the Federal or any Provincial Legislature; thereafter no Dominion Act shall be void nor inoperative because repugnant to any existing or future law in the United Kingdom; the Parliament of Canada may repeal or amend any Act of the United Kingdom in so far as it is part of the Canadian law; the Canadian Parliament has full power to make laws having extra-territorial operation; no Imperial statute shall be a part of the law of Canada unless the Dominion has requested and consented to the enactment thereof; restrictive provisions of the Merchant Shipping Act, 1894, and of the Colonial Courts of Admiralty Act, 1890, are specifically declared to be inapplicable to the Dominions; the repeal, amendment or alteration of the British North America Act, 1867, is excepted from applicability of the Statute; the restriction of powers conferred upon the Federal and the Provincial Legislatures to matters within their respective legislative competency is confirmed.

**The Growth of Canadian Diplomatic Representation Abroad.**—The change in the international status of Canada may also be linked to the development of diplomatic representation abroad. In 1880 a Canadian High Commissioner was appointed to London to handle Canadian interests with the British Government,

but the British Government demurred to giving him diplomatic status to negotiate with foreign governments. Dissatisfaction arose, however, from time to time with diplomatic services provided Canada by the Imperial Government and demands were occasionally made for separate diplomatic representation. In 1882, for example, the Honourable Edward Blake moved a resolution in the House of Commons in favour of Canadian diplomatic representation at Washington, and similar motions were made by Sir Richard Cartwright in 1889 and by the Honourable David Mills in 1892; but these resolutions were regarded as premature. Prior to the War of 1914-18 the practice of separate representation for Canada and other Dominions at international Conferences on technical matters had developed but not for Conferences dealing with political matters. At the Peace Conference it was agreed that Canada and other Dominions should become separate members of the new League of Nations and should be eligible for membership on the Council on the same terms as the smaller powers.

The appointment of resident diplomatic representatives to foreign countries developed after 1918, though at first with considerable hesitation. In 1918 a Canadian War Mission, in effect a diplomatic mission, was established at Washington but for the period of the War only. In 1920 it was announced to Parliament that an agreement had been reached with the British Government for the establishment of a Minister in Washington who would have charge of Canadian affairs and who would at all times be the ordinary channel of communication with the United States Government in matters of purely Canadian concern. The agreement, however, provided that in the absence of the British Ambassador the Canadian Minister would take charge of the British Embassy "and of the representation of Imperial as well as Canadian interests". The intention obviously was to maintain the diplomatic unity of the Empire although providing for special representation of Canadian interests. But no representative was appointed until 1927 and then the earlier arrangement about representing imperial interests in the absence of the British Ambassador was dropped completely, the Canadian Minister representing Canada only. Since 1927 exchange of diplomatic representatives with foreign countries has been widely extended. Prior to the present war legations had been established in France, Japan, Belgium and the Netherlands and in addition Canada maintained a Permanent Delegate to the League of Nations. During the present war many other countries have exchanged or agreed to exchange diplomatic representatives with Canada, among them, China, the U.S.S.R., Brazil, Chile, Argentina, Poland, Czechoslovakia, Mexico, Sweden and Turkey. In 1943 a final stage in the development of diplomatic representation was reached when by agreement the Canadian Minister in Washington and the United States Minister in Ottawa were raised to the rank of Ambassador. Similar agreements with other governments quickly followed, notably the Soviet Union, China, Brazil and Belgium.

It should also be observed that relations between members of the British Commonwealth of Nations are now conducted through channels which are in all essential the same as the diplomatic channels existing between independent countries. As noted previously, a High Commissioner was appointed to Great Britain in 1881 but the United Kingdom did not reciprocate until 1928, when following the restatement of the constitutional position by the Imperial Conference of 1926, the Governor General ceased to be the representative of the United Kingdom Government although retaining the function of personal representative of His Majesty the King. In the early stages of the present war Canada exchanged High Commissioners with Australia, New Zealand, the Union of South Africa and Eire, while in 1941 a High Commissioner was appointed to Newfoundland.

**Appeal to the Privy Council.**—An interesting sequel to the enactment of the Statute of Westminster occurred when a petition for special leave to appeal to the King in Council from a judgment of the Court of King's Bench (Appeal Side) of the Province of Quebec in a criminal matter was dismissed by the Judicial Committee of the Privy Council. The Court of King's Bench had held that the petition for special leave to appeal was incompetent by reason of the prohibition of appeals to His Majesty in criminal matters by the Canadian Statute 23 and 24 Geo. V, c. 53, s. 17.

It was held by the Judicial Committee that:—

"... the petition was incompetent. Before the Statute of Westminster, 1931 (22 Geo. V, c. 4), the Canadian Legislature was subject to the limitations imposed by the Colonial Laws Validity Act, 1865 (28 & 29 Vict., c. 63), by which legislation repugnant to an Act of the Imperial Parliament was declared void, by s. 129 of the British North America Act, 1867 (30 & 31 Vict., c. 3), and also by the doctrine forbidding extra-territorial legislation. These limitations were abrogated by the Statute of Westminster. The extent of the legislative competence conferred on the Canadian Legislature in regard to appeals to the King in Council in criminal matters must now be ascertained from its constituent Act, the British North America Act, 1867. The right of appeal to the King in Council is a prerogative right, and the prerogative cannot be restricted or qualified save by express words or necessary intendment. Sect. 91 of the Act read with the rest of the Act, not by express words, but by necessary intendment, does invest the Canadian Legislature with power to regulate or prohibit appeals to the King in Council in criminal matters. Appeal to the King in Council is prohibited in precise words by s. 17 of the Canadian Statute, 23 & 24 Geo. V, c. 53.

BRITISH COAL CORPORATION *et al* v. THE KING (1935) A.C. 500.  
Judgment rendered June 6th, 1935."

It is commonly agreed that the Statute of Westminster has capped the arch on which now firmly rests Canada's nationhood. To the assertion and establishment of complete self-government on a basis of equality within the British Commonwealth of Nations successive Canadian Governments of whatever political complexion have consistently contributed. This national status is now fully recognized at home and abroad with the many implications and the numerous responsibilities inherent herein.

## PART II.—LEGISLATIVE AND EXECUTIVE AUTHORITIES

### Section 1.—Dominion Parliament and Ministry

The Dominion Parliament is composed of the King (represented by the Governor General), the Senate and the House of Commons. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

#### Subsection 1.—The Governor General of Canada

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and instructions (which he must communicate to the King's Privy Council for Canada) and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, sum-

mons, prorogues and dissolves Parliament, and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly, exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in the United Kingdom has been instituted.

### 1.—Governors General of Canada, 1867-1944

Name	Date of Appointment	Date of Assumption of Office
VISCOUNT MONCK, G.C.M.G.....	June 1, 1867	July 1, 1867
LORD LISGAR, G.C.M.G.....	Dec. 29, 1868	Feb. 2, 1869
THE EARL OF DUFFERIN, K.P. K.C.B., G.C.M.G.....	May 22, 1872	June 25, 1872
THE MARQUIS OF LORNE, K.T., G.C.M.G.....	Oct. 5, 1878	Nov. 25, 1878
THE MARQUIS OF LANSDOWNE, G.C.M.G.....	Aug. 18, 1883	Oct. 23, 1883
LORD STANLEY OF PRESTON, G.C.B.....	May 1, 1888	June 11, 1888
THE EARL OF ABERDEEN, K.T., G.C.M.G.....	May 22, 1893	Sept. 18, 1893
THE EARL OF MINTO, G.C.M.G.....	July 30, 1898	Nov. 12, 1898
EARL GREY, G.C.M.G.....	Sept. 26, 1904	Dec. 10, 1904
FIELD MARSHAL H.R.H. THE DUKE OF CONNAUGHT, K.G.	Mar. 21, 1911	Oct. 13, 1911
THE DUKE OF DEVONSHIRE, K.G., G.C.M.G., G.C.V.O....	Aug. 19, 1916	Nov. 11, 1916
GENERAL THE LORD BYNG OF VIMY, G.C.B., G.C.M.G., M.V.O.....	Aug. 2, 1921	Aug. 11, 1921
VISCOUNT WILLINGDON OF RATTON, G.C.S.I., G.C.I.E., G.B.E.....	Aug. 5, 1926	Oct. 2, 1926
THE EARL OF BESSBOROUGH, G.C.M.G.....	Feb. 9, 1931	Apr. 4, 1931
LORD TWEEDSMUIR OF ELSFIELD, G.C.M.G., G.C.V.O., C.H.	Aug. 10, 1935	Nov. 2, 1935
MAJOR-GENERAL THE EARL OF ATHLONE, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.....	Apr. 3, 1940	June 21, 1940

### Subsection 2.—The Ministry

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

### 2.—Ministries since Confederation

NOTE.—A complete list of the members of Dominion Ministries from Confederation to 1913 appear in the 1912 Year Book, pp. 422-429. Later Ministries will be found in the corresponding tables of subsequent editions of the Year Book.

Ministry	Prime Minister	Length of Administration
1	Right Hon. Sir JOHN A. MACDONALD.....	July 1, 1867 - Nov. 6, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 - Oct. 16, 1878
3	Right Hon. Sir JOHN A. MACDONALD.....	Oct. 17, 1878 - June 6, 1891
4	Hon. Sir JOHN J. C. ABBOTT.....	June 16, 1891 - Dec. 5, 1893
5	Hon. Sir JOHN S. D. THOMPSON.....	Dec. 5, 1893 - Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 - Apr. 27, 1896

## 2.—Ministries since Confederation—concluded

Ministry	Prime Minister	Length of Administration
7	Right Hon. Sir CHARLES TUPPER.....	May 1, 1896 - July 8, 1896
8	Right Hon. Sir WILFRID LAURIER.....	July 11, 1896 - Oct. 6, 1911
9	Right Hon. Sir ROBERT L. BORDEN.....	Oct. 10, 1911 - Oct. 12, 1917 (Conservative Administration)
10	Right Hon. Sir ROBERT L. BORDEN.....	Oct. 12, 1917 - July 10, 1920 (Unionist Administration)
11	Right Hon. ARTHUR MEIGHEN.....	July 10, 1920 - Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Right Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 - June 28, 1926
13	Right Hon. ARTHUR MEIGHEN.....	June 29, 1926 - Sept. 25, 1926
14	Right Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1926 - Aug. 6, 1930
15	Right Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 - Oct. 23, 1935
16	Right Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 - —

## 3.—Members of the Sixteenth Dominion Ministry as at Nov. 26, 1943

(According to precedence of the Ministers)

Office	Occupant	Date of Appointment <sup>1</sup>
Prime Minister, President of the Privy Council, Secretary of State for External Affairs.....	Right Hon. WILLIAM LYON MACKENZIE KING, C.M.G.....	Oct. 23, 1935
Minister of Mines and Resources.....	Hon. THOMAS ALEXANDER CRERAR.....	Oct. 23, 1935

<sup>1</sup> The ordinary legal limit of duration for each Parliament is five years. <sup>2</sup> Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive. <sup>3</sup> Date of general election. <sup>4</sup> Writs returnable.

<sup>5</sup> Dissolution of Parliament. <sup>6</sup> Including days (13) of adjournment from Mar. 3 to Mar. 15. <sup>7</sup> Not including days (54) of adjournment from Dec. 15 to Feb. 8. <sup>8</sup> Not including days (65) of adjournment from Nov. 25 to Jan. 30. <sup>9</sup> Not including days (89) of adjournment from Aug. 8 to Nov. 4.

<sup>10</sup> Not including days (280) of adjournment from Dec. 6, 1940, to Feb. 17, 1941; from June 14, 1941, to Nov. 3, 1941; and from Nov. 14, 1941, to Jan. 21, 1942. <sup>11</sup> Not including days (205) of adjournment from Mar. 27, 1942, to Apr. 20, 1942; from Apr. 23, 1942, to Apr. 28, 1942; and from Aug. 1, 1942, to Jan. 27, 1943. <sup>12</sup> Not including days of adjournment from July 24, 1943, to Jan. 26, 1944.

## Subsection 3.—The Senate\*

From an original membership of 72 at Confederation the Senate, through the addition of new provinces and the general growth of the Dominion, now has 96 members, the latest change in representation having been made in 1915. The growth of representation in the Senate is traced at pp. 47-49 of the 1940 edition of the Year Book and is summarized, by provinces, in Table 6.

\* A senator's sessional indemnity is \$4,000.

#### Subsection 4.—The House of Commons\*

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, forty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick". Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:—

- "(1) Quebec shall have the fixed number of Sixty-five Members;
- "(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
- "(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
- "(4) On any such Readjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
- "(5) Such Readjustment shall not take effect until the Termination of the then existing Parliament."

Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act not thereby disturbed".

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

**Readjustments in Representation.**—As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 (33 Vict., c. 3), 4 members to represent the newly created province of Manitoba; also, according to the agreement under which British Columbia entered Confederation (ratified by Imperial Order in Council of May 16, 1871), 6 members were added to represent the new province, making a total of 191 members at the end of the first Parliament of Canada.

\* The sessional indemnity of a member of the House of Commons is \$4,000.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872) increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21, and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that province—bringing the membership of the House of Commons to 206.

Results of the second census, that of 1881, necessitated the passage of a new Representation Act (45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5, thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24, passed in 1886, 4 members for the Northwest Territories (2 for the then provisional district of Assiniboia and 1 each for the then provisional districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census, of 1891, was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213.

The fourth census, of 1901, resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4. On the other hand the representation of Manitoba was increased from 7 to 10, of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10. By c. 37 of the Statute of 1902, a member was added for the Yukon Territory, so that the net effect of the changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth of the Northwest Territories, however, led to their division and the admission to Confederation in 1905 of the Provinces of Alberta and Saskatchewan. In the Acts admitting them—the Alberta Act (4-5 Edw. VII, c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)—it was provided that the representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10 and of Alberta from 4 to 5 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 81, of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3. On the other hand, the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13. The net result was an increase of 13 members in the total membership of the House of Commons, bringing the figure to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19.) The total membership of the House of Commons in the thirteenth and fourteenth Parliaments (elected in 1917 and 1921, respectively) was 235.

As a result of the smaller increase of population shown by the Census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 1 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because the provisions of the amendment of 1915 to the B.N.A. Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because (under Sub-section 4 of Section 51 of the British North America Act) the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921 population of Quebec, within its 1911 boundaries, *viz.*, 2,358,412, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283.

The population of Quebec in 1931, exclusive of the population (2,177) of the territory added to Quebec by the Boundaries Extension Act of 1912, was 2,872,078, which, divided by 65, gave a unit of representation of 44,186. The populations of the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Manitoba each showed a decrease in the rate of growth as compared with the rate for Canada as a whole, but because that decrease in Ontario and Manitoba was less than one-twentieth the representation of these two provinces remained the same as in 1931. The proportion for each of the other provinces diminished by more than one-twentieth and as a consequence Nova Scotia lost 2 members. The representation of Prince Edward Island and of New Brunswick on a strict basis of population would have been reduced by 2 members each but, because of the provision that members of the House of Commons returned by a province shall never be fewer than its senators, the representation of the former province remained unchanged at 4 and that of the latter was reduced from 11 to 10. The representation of Saskatchewan remained at 21, while Alberta gained 1 member and British Columbia 2.

A table showing, the representation of the Provinces and Territories of Canada in the House of Commons, as determined by the Censuses of 1911, 1921 and 1931 is given at p. 76 of the 1934-35 Year Book.

The number of representatives of each province elected at each of the nineteen general elections since Confederation is given in Table 8.

**Redistribution for 1941 Postponed.**—For the first time since Confederation, the redistribution of parliamentary constituencies, required by the B.N.A. Act after each decennial census, has been postponed. A resolution to that effect was presented to Parliament and forwarded to London in the form of an address to His Majesty the King. His Majesty caused a Bill to be laid before the Parliament of the United Kingdom for the enactment of the provisions of the resolution; this was duly passed through all stages by July 22, 1943. The Bill provides that "notwithstanding anything in the British North America Acts, 1867 to 1940, it shall not be necessary that the representation of the provinces in the House of Commons be readjusted, in consequence of the completion of the decennial census taken in the year One Thousand Nine Hundred and Forty-One, until the first session of the Parliament of Canada commencing after the cessation of hostilities between Canada and the German Reich, the Kingdom of Italy and the Empire of Japan".

**9.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Nineteenth General Election Mar. 26, 1940.**

**NOTE.**—This information, except the populations of constituencies and party affiliations, has been supplied by the Chief Electoral Officer, Ottawa, who publishes an official report giving the total vote cast for each candidate. This information is also published in pamphlet form and is available on application to the Chief Electoral Officer. Party affiliations are as shown in the Canadian Parliamentary Guide (unofficial). Population figures are those for the latest census, as shown in Chapter IV.

<sup>1</sup> Acclamation.

### Subsection 5.—The Franchise at Dominion Elections

It was provided by the British North America Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently remained the same for both Dominion and provincial elections until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (47-48 Vict., c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (59-60 Vict. c. 14), the provincial franchises were again made applicable at Dominion elections. The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War Times Elections Act (708 Geo. V, c. 39), which admitted certain near female relatives of members of the military forces, or of the naval forces, to vote at Dominion elections, and three years later, on the adoption of the New Dominion Elections Act (10-11 Geo. V, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. The right to vote was conferred by the new Act upon all British subjects, men and women, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired to vote. Women were granted general franchise in Canada in 1918 (8-9 Geo. V, c. 20), and have voted at all Dominion elections held since that date.

**Franchise Legislation now in Force.**—The right to vote is at present provided for in the Dominion Elections Act, 1938 (2 Geo. VI, c. 46). The franchise is conferred upon all British subjects, men or women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to the polling day at a Dominion election, and ordinarily resident in the electoral district on the date of the issue of the writ for such election. Lists of electors are prepared afresh for use at each Dominion election. Those denied the right to vote are:—

1. Judges appointed by the Governor in Council;
2. The returning officer for each electoral district;
3. Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
4. Indians ordinarily resident on an Indian reservation who did not serve in the War of 1914-18;
5. Persons restrained of their liberty or management of their property by reason of mental disease;
6. Eskimos, whether born in Canada or elsewhere;
7. Persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the War of 1914-18;
8. Doukhobors, residing in the Province of British Columbia, whether born in Canada or elsewhere;
9. Persons disqualified under any law relating to the disqualification of electors on account of corrupt and illegal practices;
10. Inmates of an institution which is maintained by any government or municipal authority for the housing of the poor, if such persons are disqualified from voting at an election of a member of the Legislative Assembly of the province, and who did not serve in the War of 1914-18.

According to a special procedure provided by The Active Service Voting Regulations, every Canadian on Active Service, irrespective of age, and whether stationed within or without Canada, is entitled to vote at a general election, and his vote is applied to the electoral district from which he or she enlisted. In the Speech from the Throne, delivered Jan. 27, 1944, it was announced that adequate facilities for this purpose would be provided.

### Voters on the Lists and Votes Polled at the General Elections of 1926, 1930, 1935 and 1940

NOTE.—Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 will be found at the end of the 1926 Year Book.

Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1940, 39,196 voters on the list cast 39,196 votes. <sup>2</sup> Each voter in the double-member constituency of New Brunswick, N.S., had two votes; in 1940, 68,422 voters on the list cast 89,020 votes. <sup>3</sup> Each voter in the double-member constituency of St. John-Albert, N.B., had two votes; in 1930, 37,067 voters on the list cast 74,134 votes. <sup>4</sup> Not including one electoral district in which the return was by acclamation. <sup>5</sup> Each voter in the double-member constituency of Ottawa, Ont., had two votes; in 1930, 61,535 voters on the list cast 97,369 votes. <sup>6</sup> Not including two electoral districts in which the returns were by acclamation.

## Section 2.—Provincial Governments

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The constitutions of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. A detailed description of the Provincial Governments is given at pp. 101-115 of the 1922-23 edition of the Year Book.

### 13.—Lieutenant-Governors of Provinces, 1867-1943, and Present Ministries as at Dec. 31, 1943

NOTE.—The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life. Where a knighthood or other honour was conferred during the term of office, it is shown. Many Lieutenant-Governors were knighted after their term had expired. Legislatures and Ministries from Confederation to 1923 will be found at pp. 75-84 of the 1924 Year Book, and for 1924-37 at p. 110-118 of the 1938 Year Book. When two or more dates are shown for the appointment of a Minister, the first denotes the original appointment to the Ministry and the second or last to the portfolio held at present.

Dawson District.....	(Vacant)
Whitehorse District.....	Willard Leroy Phelps, K.C., Whitehorse
Mayo District.....	Richard Gordon Lee, Mayo

### 13.—Lieutenant-Governors of Provinces, 1867-1943, and Present Ministries as at Dec. 31, 1943—concluded

#### THE NORTHWEST TERRITORIES

NOTE.—In 1888 the District of Alberta, Assiniboia, Athabaska and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government, and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these Districts was formed into the Provinces of Alberta and Saskatchewan, on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The resources of the remaining areas (Yukon and the Provisional Districts of Franklin, Keewatin and Macenzie) are now administered by the Lands, Parks and Forests Branch, Department of Mines and Resources.

(Appointed by the Governor General in Council)

Commissioner—Charles Camsell, C.M.G., LL.D., F.R.S.C.

Deputy Commissioner—Roy Alexander Gibson.

Members of the Council—Austin Louis Cumming; Kenneth Robinson Daly; Harold Wigmore McGill, M.C., M.D.; Stuart Taylor Wood; Hugh Llewellyn Keenleyside, M.A., Ph.D.

Secretary—David Livingstone McKeand.

## PART III.—REPRESENTATIVES OF CANADA IN OTHER COUNTRIES\*

### Section 1.—High Commissioners Within the British Commonwealth of Nations

**United Kingdom.**—The present High Commissioner for Canada in the United Kingdom is the RT. HON. CHARLES VINCENT MASSEY, who was appointed on Nov. 8, 1935. His office is in Canada House, Trafalgar Square, London, S.W.1.

Following is the list of previous High Commissioners:—

SIR ALEXANDER GALT, 1880-83

SIR CHARLES TUPPER, 1884-87, 1888-96

LORD STRATHCONA AND MOUNT ROYAL, 1896-1914

SIR GEORGE PERLEY, 1917-22 (Acting High Commissioner 1914-17)

THE HON. P. C. LARKIN, 1922-30

THE HON. G. HOWARD FERGUSON, 1930-35

**Australia.**—The present High Commissioner for Canada in Australia is the HON. THOMAS C. DAVIS, who was appointed on Nov. 4, 1942. His office is in Canberra.

Following is the list of previous High Commissioners:—

MR. CHARLES J. BURCHELL, 1939-41

MAJOR-GENERAL VICTOR ODLUM, 1941-42

\* Revised by the Department of External Affairs, Ottawa, in February, 1944. An annual report on the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, price 10 cents.

**New Zealand.**—The present and first High Commissioner for Canada in New Zealand is DR. W. A. RIDDELL, who was appointed on Feb. 1, 1940. His office is in Wellington.

**South Africa.**—The first High Commissioner for Canada in the Union of South Africa was DR. HENRY LAUREYS, who was appointed on Feb. 1, 1940. The High Commissioner's office is in Pretoria. He has been succeeded by MR. CHARLES J. BURCHELL, K.C.

**Ireland.**—The present High Commissioner for Canada in Ireland is MR. J. D. KEARNEY, K.C., who was appointed on July 31, 1941. His office is in Dublin. The previous High Commissioner was MR. JOHN H. KELLY, 1940-41.

**Newfoundland.**—The first High Commissioner for Canada in Newfoundland was MR. CHARLES J. BURCHELL, K.C., who was appointed on July 31, 1941. He has been transferred to Pretoria; pending the appointment of a successor, DR. HUGH L. KEENLEYSIDE is Acting High Commissioner. His office is in St. John's.

## Section 2.—Representatives in Foreign Countries

**United States of America.**—The Canadian Ambassador to the United States is the HON. LEIGHTON GOLDIE MCCARTHY, K.C., who was appointed Minister Plenipotentiary on Feb. 24, 1941, and presented his Letter of Credence as Ambassador on Jan. 12, 1944. The address of the Canadian Embassy is 1746 Massachusetts Avenue, Washington, D.C.

Following is the list of previous Ministers:—

THE HON. CHARLES VINCENT MASSEY, 1927-30

THE HON. W. D. HERRIDGE, 1931-35

THE HON. SIR HERBERT MARLER, 1936-39

MR. LORING C. CHRISTIE, 1939-41

*Canadian Consulate General in New York City, N.Y.*—The Canadian Consulate General in New York City is in charge of MR. HUGH DAY SCULLY, Consul General who was appointed to that post Apr. 8, 1943. The Consulate General is situated at 620 Fifth Avenue, New York, N.Y.

**Belgium, Czechoslovakia, Greece, Netherlands, Norway, Poland, Yugoslavia.**—(Temporary address—London, England). The present Minister to these countries is MAJOR-GENERAL GEORGE P. VANIER, who was appointed on Nov. 30, 1942. During the absence of General Vanier in Algiers (see below) MR. PIERRE DUPUY is Chargé d'Affaires of the Canadian Legation to the Allied Governments established in the United Kingdom.

**Brazil.**—The first Canadian Ambassador to Brazil is MR. JEAN DESY, who was appointed Minister Plenipotentiary June 24, 1941, and presented his Letter of Credence as Ambassador on Jan. 18, 1944. The Canadian Embassy is at Rio de Janeiro.

**Argentina.**—The first Canadian Minister to Argentina was the HON. W. F. TURGEON, who was appointed July 31, 1941. He has been transferred to another post; in his absence, MR. K. P. KIRKWOOD is Chargé d'Affaires. The Canadian Legation is at Buenos Aires.

**Union of Soviet Socialist Republics.**—The first Canadian Ambassador to the Union of Soviet Socialist Republics is Mr. L. D. WILGRESS, who was appointed Minister Plenipotentiary Nov. 4, 1942, and will shortly present his Letter of Credence as Ambassador. The Canadian Embassy is at Moscow.

**China.**—The first Canadian Ambassador to China is MAJOR-GENERAL, VICTOR W. ODLUM, who was appointed Minister Plenipotentiary Nov. 4, 1942, and will shortly present his Letter of Credence as Ambassador. The Canadian Embassy is at Chungking.

**Chile.**—The present and first Canadian Minister to Chile is Mr. WARWICK F. CHIPMAN, K.C., who was appointed Nov. 4, 1942. The Canadian Legation is at Santiago.

**French Committee of National Liberation, Algiers.**—After the formation of the Committee in Algiers, MAJOR-GENERAL GEORGE P. VANIER, who had been Canadian Representative to the Committee in London, was appointed at Algiers in a similar capacity, with the personal rank of Ambassador.

**Greenland.**—The Canadian Consulate at Greenland is in charge of VICE-CONSUL M. G. DUNBAR, who was appointed to that post Sept. 15, 1941.

**St. Pierre and Miquelon.**—The Canadian Consulate at St. Pierre and Miquelon is in charge of ACTING CONSUL LIEUTENANT D. E. FOLKES JEMMETT. He was appointed to that post Dec. 11, 1942.

During 1943 arrangements were reached with a number of countries for the exchange of ambassadors. The agreement with the United States was announced on Nov. 11, 1943, and on Nov. 19, the Hon. Ray Atherton presented to the Governor General his letter of credence as United States Ambassador to Canada. Similar agreements for the exchange of ambassadors were reached with the Soviet Union, China, Brazil and Belgium.

In August, the first Swedish Minister to Canada presented his credentials in Ottawa, and, in November, announcement was made of an agreement with Turkey or the establishment of a Turkish Legation in Canada.

Early in 1944 it was announced that the Canadian Government had agreed with the Governments of Mexico and Peru to exchange diplomatic missions.

## PART IV.—REPRESENTATIVES OF OTHER COUNTRIES IN CANADA

### Section 1.—Representatives of the Governments of the British Commonwealth of Nations

**High Commissioner for the United Kingdom:** (Office established 1928.)

The present High Commissioner is the RT. HON. MALCOLM MACDONALD, M.P., who assumed office in 1941. The previous High Commissioners were:—

SIR WILLIAM H. CLARK, 1928-34

SIR FRANCIS FLOUD, 1935-38

SIR GERALD CAMPBELL, 1938-41

Address: Earningscliffe, Ottawa.

**High Commissioner for the Commonwealth of Australia:** (Office established 1939.)

The present and first High Commissioner is MAJOR-GENERAL THE HON. SIR WILLIAM GLASGOW, K.C.B., who assumed office in 1940.

Address: 114 Wellington St., Ottawa.

**High Commissioner for New Zealand:** (Office established 1942.)

The present Acting High Commissioner is MR. R. M. FIRTH, who assumed office in 1942.

Address: 105 Wurtemburg Street, Ottawa.

**Accredited Representative of the Union of South Africa:** (Office established 1938.)

The present and first Accredited Representative is MR. DAVID DE WAAL MEYER who assumed office in 1938.

Address: 56 Sparks Street, Ottawa.

**High Commissioner for Ireland:** (Office established 1939.)

The present and first High Commissioner is MR. JOHN J. HEARNE, who assumed office in 1939.

Address: 140 Wellington Street, Ottawa.

## Section 2.—Diplomatic Representatives of Foreign Countries

**United States of America:** (Established 1927.)

*Ambassador Extraordinary and Plenipotentiary:* HON. RAY ATHERTON (Nov. 19 1943).

Address: Wellington Street, Ottawa.

**Belgium:\*** (Established 1937.)

*Ambassador Extraordinary and Plenipotentiary:* BARON SILVERCRUYS (Feb. 1 1944).

Address: 395 Laurier Avenue East, Ottawa.

**China:\*** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* DR. LIU SHIH SHUN (Feb. 26 1942).

Address: 201 Wurtemburg Street, Ottawa.

**Poland:** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* MR. VICTOR PODOSKI (Mar. 27, 1942).

Address: 333 Chapel Street, Ottawa.

**Norway:** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* MR. DANIEL STEEN. (Apr. 2 1942).

Address: 192 Daly Avenue, Ottawa.

**Yugoslavia:** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* DR. IZIDOR CANKAR (May 15 1942).

Address: 259 Daly Avenue, Ottawa.

**Greece:** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* MR. GEORGE DEPASTA (June 5, 1942).

Address: Chateau Laurier, Ottawa.

\* Agreement has been concluded for the elevation of the Legation to rank of Embassy.

**Czechoslovakia:** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* DR. FRANTISEK PAVLASEK (Aug. 14, 1942).

Address: 171 Clemow Avenue, Ottawa.

**Brazil:**\* (Established 1941.)

*Envoy Extraordinary and Minister Plenipotentiary:* MR. CAIO DE MELLO FRANCO (Aug. 28, 1942). MR. DE MELLO FRANCO is being transferred to another post. Agreement has been given to the appointment of MR. CYRO DE FREITAS-VALLE as *Ambassador Extraordinary and Plenipotentiary*.

Address: 140 Wellington Street, Ottawa.

**Chile:** (Established 1942.)

*Envoy Extraordinary and Minister Plenipotentiary:* DR. EDUARDO GROVE (Sept. 15, 1942).

Address: 56 Sparks Street, Ottawa.

**Sweden** (Established 1943.)

*Envoy Extraordinary and Minister Plenipotentiary:* MR. PER WIJLMAN (Aug. 4, 1943).

Address: Rockcliffe Park.

**Argentina:** (Established 1941.)

*Envoy Extraordinary and Plenipotentiary:* DR. EDUARDO L. VIVOT (Dec. 14, 1943).

Address: 18 Rideau Street, Ottawa.

**Union of Soviet Socialist Republics:**\* (Established 1942.)

*Chargé d'Affairs ad interim:* MR. GREGORI I. TOUNKIN.

Address: 285 Charlotte Street, Ottawa.

**Netherlands:** (Established 1939.)

*Envoy Extraordinary and Minister Plenipotentiary:* JONKHEER J. W. M. SNOUK HURGRONJE (nominated).

*Chargé d'Affairs ad interim:* MR. G. W. BOISSEVAIN.

Address: 18 Range Road, Ottawa.

**Turkey**

*Envoy Extraordinary and Minister Plenipotentiary:* MR. SHEVKI ALHAN (nominated).

**Mexico:** DR. FRANCISCO DEL RIO CANEDO.

**Peru**

*Envoy Extraordinary and Minister Plenipotentiary:* MR. EMILIO ORTIZ DE ZEVALLOS (nominated).

**French Committee of National Liberation:**

*Delegate:* MR. GABRIEL BONNEAU.

**PART V.—CANADA AND THE LEAGUE OF NATIONS†**

An account of Canada's relationship with the League, and an outline of its organization, is given in the Year Books from 1931 to 1940. See the list of Special Articles at the front of this edition.

\* Agreement has been concluded for the elevation of the Legation to the rank of Embassy.

† The League of Nations Society in Canada, 124 Wellington Street, Ottawa, is the authorized agent for the publications of the League of Nations.

## CHAPTER IV.—POPULATION\*

### CONSPECTUS

The records accumulated at the decennial censuses of Canada, since the creation of the Dominion in 1867 to the latest census to date, 1941, make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the census the most important statistical milestone of accomplishment and progress.

The salient aspects of population growth under each main heading shown in the conspectus above are covered but not necessarily in any one edition. The policy adopted is to maintain the skeleton of the chapter and the historical tables as a permanent feature and build up each section as statistics are available following each census. Therefore, much material for the 1941 Census is given in the following pages and data not yet available will be published in subsequent editions. The Canada Year Book can do no more than summarize the broad results of the Census but this summary includes all the information required by the general reader. To help those who wish to delve deeper into details, necessary references are given in the text.

The main legal reason for a periodic census under the Constitution of Canada is to determine representation in the House of Commons: this, according to the British North America Act, is based on population (see p. 53). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from the census data. In view of this the *de jure* principle of enumeration is used, i.e., each person is counted as belonging to the locality of his regular domicile, rather than to the place he may be at the date of enumeration, a method followed in some other countries.

Yet the modern Dominion-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can therefore be used in the regulation of general administration and public affairs, social security and post-war rehabilitation programs, etc. For instance, achievement can be measured from the census records by examination of how progressively modern machinery and household equipment, radios and motor-

\* This chapter, as recast, has been checked by A. J. Pelletier, F.S.S., Chief, Demography Branch Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXX Section 1, under "Population".

cars have been introduced into industry and into home life over a series of decades. The changing complexion of the population can be traced in each area or locality, and the influences of age, sex, occupation, etc., shown. Comparative standards of living are indicated by data concerning employment, earnings, housing accommodation, etc. (especially when supplemented by consumption and price data). Changing social and economic conditions are reflected by the movement of population from rural districts to urban municipalities and, vice versa, by the growth of industry, the numbers and status of farm mortgages, taxes and a hundred and one other factors. Many other items of information upon which the Government must depend to conduct the business of the country are made available by this periodical stocktaking of the people.

**History of the Census in Canada.**—In 1666, Talon the Intendant of New France took an official census of the Colony for the purpose of measuring the increase in numbers that had taken place since the founding of Quebec by Champlain in 1608. These figures are, however, of historical interest rather than accurate census data. (For further details, see *Census of Canada, 1931, Vol. I, pp. 133-153.*)

Similar censuses of New France, which grew in detail, were taken no less than thirty-six times during the years intervening between 1666 and 1739 and many more times from that date to the close of the French régime in 1763. During the following years (see the 1942 Year Book, p. 83) a series of less elaborate reports supervened, with censuses appearing at irregular intervals, until the year 1841 when an Act was passed on September 18, after the union of Upper and Lower Canada, which provided that a census should be taken in the year 1842 and every fifth year thereafter. Under this Act the Census of Upper Canada only was taken: the Act was amended in 1842 and a census of Lower Canada was taken in 1844. (See *Census of Canada, 1931, Vol. I, p. 36.*)

In 1847 legislation was passed creating a Board of Registration and Statistics which took a census of Upper Canada in 1848 and a general census in 1850.

In 1851 Royal Assent was given to an Act to provide more effectually for the taking of the census in 1852 (these figures were later linked with those taken by the colonies of Nova Scotia and New Brunswick in 1851, and in Prince Edward Island in 1848 to give reasonably comparable totals, *circa* 1851, for these sections of British North America), 1861 and every tenth year thereafter. An unbroken series of census records, taken at regular decennial periods, is therefore available for all provinces constituting the Dominion of Canada over a period of ninety years. With the opening up of settlement in the three western provinces, immigration developed on such a scale that an Act was passed in 1918 providing that a census of population and agriculture be taken in the Provinces of Manitoba, Saskatchewan and Alberta in 1926 and every tenth year thereafter. Thus censuses of the Prairie provinces are now taken quinquennially and of the Dominion as a whole decennially. The primary purpose of the former is to fix the basis for subsidies payable on a per capita basis to the western provinces by the Dominion Government. (See *Census Legislation in Canada, Census of Canada, Vol. I, 1931, p. 29; or Statutes 9 Vic., c. 46, s. 5; 4-5 Ed. VII, c. 3, s. 18B; 4-5 Ed. VII, c. 42, s. 18B.*)

**Growth of Population in Canada.**—A brief résumé of the population history of Canada from the first census in 1666, when it numbered 3,215 persons, to the eighth Dominion census of 1941, when the figure was 11,506,655, places Canada among the leading countries of the British Empire in the rate of population growth.

The inflow of capital and the opening up of new and vast areas with the consequent stimulation of immigration began with the opening of the twentieth century and was the latest episode in the transformation of the central prairie region, which, in the course of forty years, has been organized into provinces and developed with such promise. While at the end of the nineteenth century the population of the Dominion of Canada was approximately 5,400,000, it had about doubled this figure by 1931. The general increase in the population of European countries during the entire nineteenth century was approximately three-fold; Canada equalled this rate of progress during the sixty years from 1871 to 1931.

In the decade 1900-10 immigration, alone, totalled 1,800,000. This figure was the main factor in the gain of 34.17 p.c. which the total population of Canada registered in that decade and which was relatively larger than the growth of any modern country during the same period.

The next decade started out with an intensification of this immigration movement, but with the outbreak of the First World War a recession set in. The effects of the First World War upon the Canadian population were both direct and indirect. Nearly 60,000 Canadians died overseas and approximately 20,000 took their discharge in the United Kingdom. To these may be added 50,000 deaths from the war plague, influenza. In addition large numbers of British residents in Canada, most of them recent immigrants, left Canada to join the forces of the United Kingdom and did not return, and the same is true of enemy nationals who passed in considerable numbers into the United States immediately before and after the declaration of hostilities. The fluidity of the Canadian population accordingly rendered the War costly in personnel far beyond actual casualties. However, the net result over the ten years was a population increase of 21.94 p.c. or the largest increase for any modern country with the exception of Australia where an increase of 22.01 p.c. was recorded.

The Census of 1931 showed a further increase of 18.08 p.c. on 1921. Natural increase and immigration contributed 1,325,256 and 1,509,136, respectively, although the net gain was only 1,588,837 since estimated emigration was 1,245,555, for the ten years. Census returns of Great Britain for 1921-31 showed an increase of 4.7 p.c., equalling that of the previous decade. New Zealand in the ten-year interval between 1911-21 showed an increase of 19.8 p.c. and between 1921-31 19.3 p.c. A census of Australia was not taken in 1931, but the official estimate of population based on the Census of 1933 gives an increase of 19.8 p.c. as against 22.0 p.c. for the period 1911-21 (Official Year Book of Australia, 1940, p. 519). Census figures for the United States show an increase of population of 14.9 p.c. between 1910-20 and 16.1 p.c. from 1920-30.

The eighth Census of Canada as of June 2, 1941, gives the population as 11,506,655 as compared with 10,376,786 as of June 1, 1931, an increase of 1,129,869 or 10.89 p.c. in the decade. During the greater part of this decade Canada along with all other countries was face to face with a prolonged and severe economic depression; immigration was still further restricted by government regulations as well as by economic necessity. The figures for immigrant arrivals were actually reduced from 1,166,004 in the ten-year period 1921-31 to 140,361 in 1931-41. The natural increase for this period showed a reduction of about 7 p.c. and, since immigration was reduced more than 88 p.c. over the decade, the net increase in population was due almost entirely to the still favourable birth and death rates of the established population.

## Section 1.—Census Statistics of General Population

Since the creation of the Dominion of Canada in 1867, decennial censuses have been taken as of the dates Apr. 2, 1871, Apr. 4, 1881, Apr. 5, 1891, Apr. 1, 1901, June 1, 1911, 1921, 1931 and June 2, 1941. Summary figures are given in Tables 1-7.

## 1.—Population of Canada, by Provinces and Territories, Census Years 1871-1941

NOTE.—The populations of the Prairie Provinces in 1906, 1916, 1926 and 1936, are shown at p. 147 of the 37 Year Book. For intercensal estimated populations, see table at p. 141.

Province or Territory	1871	1881	1891	1901	1911	1921	1931	1941

<sup>1</sup> Corrected as a result of the Boundaries Extension Acts, 1912.

<sup>2</sup> Revised in accordance with the Bradford Award of the Privy Council, Mar. 1, 1927. The total for Canada includes 485 members of the Royal Canadian Navy who were recorded separately in 1921.

<sup>3</sup> Revised since the publication of the 12 Year Book.

<sup>4</sup> Corrected by transfer of population of Fort Smith (308) to the Northwest Territories.

<sup>5</sup> The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec, Ontario and Manitoba.

## Percentage Distribution of Canadian Population, by Provinces and Territories, 1871-1941

<sup>1</sup> Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. The total for Canada includes 485 members of the Royal Canadian Navy who were recorded separately in 1901.  
<sup>2</sup> The decreases shown in the population of the Northwest territories since 1891 are due to the separation therefrom of vast areas to form Alberta, Saskatchewan and Yukon and to extend the boundaries of Quebec, Ontario and Manitoba.

T. A. D. 1941  
 • WHITE HORSE

# DISTRIBUTION OF POPULATION, CANADA, 1941 ——— DISTRIBUTION DE LA POPULATION, CANADA, 1941

PERCENTAGE OF TOTAL POPULATION  
 FOR THE TWELVE GREATER CITIES

POURCENTAGE DE LA POPULATION  
 TOTALE POUR LES DOUZE GRANDES  
 CITES

PERCENTAGE DISTRIBUTION OF TOTAL POPULATION  
 DISTRIBUTION PROPORTIONNELLE DE LA POPULATION TOTALE

NOTE:

A dot represents 1,000 people but the population of each of the twelve 'Greater Cities' is shown by a dot proportionate in area to the dot, and their populations are additional to the dot distribution. The Greater Cities are repeated below to facilitate comparison.

NOTE:

Un point représente 1,000 personnes mais la population de chacune des douze 'Grandes Cites' est indiquée par un disque de surface proportionnée aux points, et leur population s'ajoute à la distribution par points. Les Grandes Cites sont répétées ci-dessous pour faciliter la comparaison.

<sup>1</sup> Populations for the Provinces of Saskatchewan and Alberta are included in the N.W.T. for census purposes to 1901. Comparative figures for the census divisions of British Columbia are not available for 1871. The chart on p. 86 shows the boundaries of the census divisions of the Prairie Provinces and British Columbia.

## 6.—Area and Density of the Population of Canada, by Provinces, 1911-41

Province or Territory	Land Area in Sq. Miles	Population, 1911 <sup>1</sup>		Population, 1921		Population, 1931		Population, 1941	
		Total	Per Sq. Mile	Total	Per Sq. Mile	Total	Per Sq. Mile	Total	Per Sq. Mile

<sup>1</sup> The populations of Ontario, Quebec, Manitoba and Northwest Territories were adjusted for 1911 according to the provisions of the Boundary Extensions Acts, 1912. <sup>2</sup> Populations of Northwest Territories for Arm and Rigolet on Hamilton Inlet have been deducted from Quebec, as these parts were awarded Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927. The grand total for Canada also contains 485 members of the Royal Canadian Navy who were recorded separately in 1911. <sup>3</sup> Revised since the publication of the 1942 Year Book.

## 8.—Densities of Population in Various Countries in Recent Years

NOTE.—In the past, this table has been based on census data. Owing to the incidence of the War and postponement of regular census-taking in most countries, it has been decided to substitute density rates based on estimated population in those cases marked with an asterisk (\*), rather than give census data that is not representative of existing conditions. Total area is used, except in the cases of Canada, Netherlands, Norway, Sweden and the United States, where figures of land area are available.

Country	Year	Persons per Sq. Mile	Country	Year	Persons per Sq. Mile
Netherlands*	1942	721.16	China proper*	1939	104.97
Belgium*	1942	711.21	United States of America (not including Alaska*)	1941	45.05
United Kingdom (England and Wales, Scotland and Northern Ireland*)	1940	507.24	Sweden*	1942	40.77
France*	1940	495.72	Norway*	1940	24.75
German Reich	1939	381.98	Union of South Africa*	1941	22.26

## 9.—Movement of Population for the Intercensal Periods 1901-11 to 1931-41

Decade and Item	No.
<b>Decade, 1901-11—</b>	
Population, Census of Apr. 1, 1901	5,371,315
Natural increase (1901-11), estimated	853,566
Immigration (Apr. 1, 1901, to May 31, 1911)	1,847,651
<b>Total</b>	<b>8,072,532</b>
Population, Census of June 1, 1911	7,206,643
Emigration (Apr. 1, 1901, to May 31, 1911), estimated	865,839
<b>Decade, 1911-21—</b>	
Population, Census of June 1, 1911	7,206,643
Natural increase (1911-21), estimated	1,150,125
Immigration (June 1, 1911, to May 31, 1921)	1,728,921
<b>Total</b>	<b>10,085,689</b>
Population, Census of June 1, 1921	8,787,949 <sup>1</sup>
Emigration (June 1, 1911, to May 31, 1921), estimated	1,297,740 <sup>2</sup>
<b>Decade, 1921-31—</b>	
Population, Census of June 1, 1921	8,787,949 <sup>1</sup>
Natural Increase (1921-31), partly estimated for the years 1921-25 in the case of Quebec	1,325,256
Immigration (June 1, 1921, to May 31, 1931), including 288,874 returned Canadians	1,509,136
<b>Total</b>	<b>11,622,341</b>
Population, Census of June 1, 1931	10,376,786
Emigration (June 1, 1921 to May 31, 1931), estimated	1,245,555
<b>Decade, 1931-41—</b>	
Population, Census of June 1, 1931	10,376,786
Natural Increase (1931-41)	1,221,786
Immigration (June 1, 1931 to May 31, 1941) including 80,881 returned Canadians	230,530
<b>Total</b>	<b>11,829,102</b>
Population, Census of June 2, 1941	11,506,655
Emigration (June 1, 1931 to May 31, 1941) estimated	322,447
<b>Gain in Population, 1901-11</b>	<b>1,835,328</b>
1911-21	1,581,306
1921-31	1,588,837
1931-41	1,129,868

<sup>1</sup> Revised in accordance with the Labrador Award of the Privy Council, Mar. 1, 1927. <sup>2</sup> This figure includes also the 66,000 Canadian lives lost at the front and the soldiers (about 20,000) enlisting in Canadian Forces and receiving their discharge in the United Kingdom.

<sup>1</sup> Subject to adjustment as later data are made available.

## Section 2.—Sex Distribution

The sex distribution of the Canadian people is characterized as is that of a 'young' population, by a preponderance of males, although this condition has been greatly modified in recent times, especially since the rigid control of immigration following the First World War. In 1666, during the early years of settlement by the French-speaking immigrants, 63.27 p.c. of the population were males. In 1784, when the English-speaking immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly-settled Upper Canada. Since Confederation the newer sections of Canada—the west and the northwest—have shown the greatest excess of males.

The sex distribution in Upper and Lower Canada, as well as in the Maritime colonies of British North America for various censuses between 1838 and 1851 is shown in the following statement. There is a definite chronological trend in the masculinity (i.e., excess of males over females per 100 population) for each colony taken separately but, in general, there is a marked degree of masculinity, more so for Upper Canada, Nova Scotia and New Brunswick. Lower Canada was characterized by a rapid levelling off of the sex ratio after 1838, and Prince Edward Island shows a fairly high and regular masculinity but, unfortunately, the comparison extends over about seven years only.

SEX DISTRIBUTION IN THE COLONIES OF BRITISH NORTH AMERICA,  
CIRCA 1838, 1844 and 1851

Colony and Sex	Circa 1838	Masculinity of Population	Circa 1844	Masculinity of Population	Circa 1851	Masculinity of Population

Totals.....	—	—	47,042	2.3	62,678 <sup>4</sup>	2.4
Male.....	—		24,062		32,065	
Female.....	—		22,980		30,569	

<sup>1</sup> Includes 196,017 persons, sex not stated.  
<sup>2</sup> Includes 4,993 persons, sex not stated.<sup>3</sup> Includes 21,214 persons, sex not stated.<sup>4</sup> Includes 44 persons, sex not stated.

From 1871 to 1941, for Canada as a whole, the percentage of males never dropped below 51 p.c. of the total population, whereas for western Canada it varied between 53 p.c. and 59 p.c.

It was the influence of immigration in the first decade of the present century that was instrumental in raising the masculinity of the Canadian population to the highest point in recent history, viz., 6.07 p.c. in 1911. This figure may be compared with the masculinity of 2.56 p.c. (513 males to 487 females) recorded at the 1941 census.

Since an approximation to equality in the numbers of the sexes is desirable both for the interests of mortality and of the birth rate—an important consideration in a country where the density of the population is only 3.32 persons per square mile—this adjustment must be regarded with satisfaction.

Table 13 gives the position of Canada among other countries of the world in regard to masculinity.

Immigration has influenced the sex distribution of the population, as between the provinces, in widely different degree. In the older settlements of Quebec and parts of New Brunswick and Ontario, where the populations are of French basic stock, immigration has not played as great a part in upsetting the normal distribution of the sexes as it has in the other provinces. Even in Ontario immigrants from Continental European countries do not settle as readily and are not assimilated as completely as in the newer western provinces.

A characteristic of population distribution since 1911 has been the rapid growth of urban centres due to the far-reaching developments in manufacturing that have largely changed the economic picture. In 1911, 54.6 p.c. of the population was classified as rural and 45.4 as urban. Of the rural population of 3,933,696, 2,143,893

or 54.5 p.c. were males and 1,789,803 or 45.5 p.c. were females: of the urban population of 3,272,947, 1,678,102 or 51.3 p.c. were males and 1,594,845 or 48.7 p.c. were females. In 1941, 45.7 p.c. of the population was rural and 54.3 p.c. urban. Of the rural population of 5,254,239, 53.7 p.c. were males and 46.3 p.c. were females, while 49.2 p.c. of the urban population of 6,252,416 were males and 50.8 p.c. were females, showing quite clearly the marked trend toward urbanization both males and females.

White population only.

## Section 3.—Age Distribution

The age distribution of a population is fundamental to most, if not all, other issues, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities which are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a very small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the

very heavy immigration of the early years of the century (1900-11) is described in the text at pp. 78-79. In 1901, 175.1 persons per thousand of the total population were in the age group 20-29 years and 130.5 persons per thousand in the group 30-39 years; a decade later, 190.3 per thousand were in the former group and 142.6 in the latter. This movement was cut down very severely after the outbreak of war in 1914 and therefore the influence of these earlier accretions to the population would be expected to creep through the upper age groups year by year, and it has already reached those of the population in the 'fifties'.

Between 1931 and 1941 a more pronounced general ageing of the population is shown owing to practically non-existent migration and a lower birth rate—factors that were emphasized during the depression years. In 1921 the number per thousand of total population between 40 and 59 years of age was 183.0; it was 201.2 in 1931 and 209.5 in 1941. Greater proportional increases, however, are shown by the group 60 years of age and over; this group represented 75.1 per thousand of the total population in 1921, 83.8 in 1931 and no less than 102.2 per thousand in 1941. For observations on age distribution by provinces, see text following Table 15, p. 9.

In Canada, age distribution has shown a fairly rapid pace of development because of the changes that have characterized the factors of birth rate, mortality and migration touched on above. The following statement illustrates the situation very strikingly for the census years 1871 to 1941.

POPULATION BY CERTAIN AGE GROUPS AND RATES PER 1,000, 1871-1941

Age Group	1871		1881		1891		1901

<b>1931.....</b>	<b>218.3</b>	<b>209.0</b>	<b>164.7</b>	<b>134.0</b>	<b>112.4</b>	<b>77.8</b>	<b>83.4</b>

Certain observations stand out from the figures of Table 15. For instance British Columbia shows smaller proportions of population than any other province in the early age groups (up to 30 years for males and up to 20 years for females) and in age groups above 30 years this Province is outstanding in the high proportions recorded. These signs of an ageing population would not, normally, be expected of a western province: the reasons for them must be attributed to the consistently low birth rate over a period of time and the element of climate that has a positive attraction for retired people of advanced age from other provinces. At the other extreme is the Province of Quebec, where the lower age groups are represented by very high proportions (the Maritime Provinces are close rivals here) and the groups above 30 by exceptionally low proportions—thus indicating a relatively young population and the oldest province of the Dominion.

### Section 4.—Conjugal Condition

Next to the sex and age distribution of a population, that of conjugal condition is probably the most fundamental. Its incidence is twofold: 'vital' and 'economic and social'.

The vital basis lies in the influence of the marriage state on the fertility of the population and, from this angle, close analyses of conjugal condition, by age, are important. The ages of females, especially between 15 and 45 years, have, in the past, been of more significance than those of males; if the proportion of females in this group is small, the expected proportion of births will also be small. It has been shown

\* See Vol. I, Census of Canada, 1931, p. 204.

that for the Canadian population the combined influences of age of the population, age of the married females, and proportion of females married has become steadily more favourable to the birth rate from 1871 to 1921 but that, since the latter date, the trend has been less favourable.

The economic and social aspects of conjugal condition are important for all sections of the population—for the single, widowed and divorced equally with the married. The causes behind the variation in conjugal condition for the population generally hinge largely on changes in these economic and social conditions. Thus, it is common experience that marriages in western countries tend to increase in good times: when times are difficult, many, especially within the earlier marriageable ages, are obliged to postpone marriage until conditions improve. Wars not only stimulate marriage but are usually followed by increased rates for the widowed and divorced and bring in their wake far-reaching social changes.

**Trends in Conjugal Condition since 1871.**—There are definite advantages of stability and progress that accompany the marriage state. It is the condition into which about 75 p.c. of the population born alive enter, and therefore the normal state. The following statement appears to show that, during the past 70 years, the advantages marriage brings have been increasingly enjoyed by the Canadian people.

PERCENTAGES OF POPULATION MARRIED, 1871-1941

Census	P.C. in the Married State		P.C. Sometime Married	
	Male	Female	Male	Female
1871.....	30.70	31.42	32.78	35.95
1881.....	31.55	32.28	33.87	37.41
1891.....	32.36	33.37	34.91	38.81
1901.....	33.76	34.51	36.45	40.29
1911.....	35.11	37.08	37.52	42.47
1921.....	37.57	38.39	40.30	44.04
1931.....	37.89	38.74	40.75	44.58
1941.....	40.06	40.89	43.68	48.13

It should be noted that over the 70-year period the population as a whole has become 'older' (see under age distribution p. 94) and to this fact must be attributed one of the reasons for the increase shown, although against this must be weighed the general retardation of early marriage. When these facts are considered, the variation is shown to have been relatively slight—for both males and females it was actually downward from 1871 to 1901, upward until 1921, downward again for 1931 and upward for 1941.\*

The effects of immigration and emigration on conjugal condition are also significant. Prior to 1901 the movement of people into and out of Canada was, on balance, an outward movement to the United States but it was not a movement of single adults. Statistics show that at this time the proportion single was not reduced but rather increased. This process continued until about 1896 when the European immigration to Canada on a large scale began. These immigrants were predominantly single adult males, young but unable to marry until they had established themselves, and their presence caused at first a sagging in the proportion of married persons in Canada. But, after the first decade of the century, when the movement came to an abrupt stop and this section of the immigrant population had settled, there was a high marriage rate extending over a period of years. The First World War brought about an exodus of single males of a different age class.

\*For more detailed analyses see Census Vol. I, 1931, pp. 205-209.

The total effect of these various influences by 1921 was to raise the proportions married to levels higher than the normal, and the above-mentioned decrease for 1931 can be interpreted as an actual return to normal conditions, for in 1931 the proportion married (even after allowing for age distribution) was higher than at the beginning of the century.

### 16.—Conjugal Condition of the Population, by Sex<sup>1</sup>, 1871-1941

Year and Sex	Single	Married	Widowed	Divorced	Legally Separated	Total <sup>2</sup>
NUMBERS						
1871—Male.....	1,221,917	558,081	37,754	—	—	1,869,264

1931—Male.....	59·25	37·89	2·78	0·08	<sup>4</sup>	100·00
Female.....	55·42	38·74	5·77	0·07	<sup>4</sup>	100·00
1941—Male.....	56·32	40·06	2·90	0·11	0·61	100·00
Female.....	51·87	40·89	6·32	0·13	0·79	100·00

<sup>1</sup> Percentages are based on stated condition.

<sup>2</sup> Includes persons with conjugal condition not stated.

<sup>3</sup> Legally separated included with divorced.

<sup>4</sup> Legally separated included with married.

In Table 16 are given, together with percentages, the summary statistics of conjugal condition as single, married, widowed, divorced and legally separated for all censuses from 1871, inclusive. The conjugal condition of the 1941 population is shown, by provinces and sex, in Table 17 and by age groups in Table 18.

A phenomenon that needs a word of explanation is the fact that in 1941 Ontario, for instance, possessed a preponderance of married males over married females. Of 64 Ontario cities, towns and villages with populations of 5,000 or over, only 6 had a preponderance of married females over married males. In Canada as a whole there are more married males than married females because of the excess of married male immigrants. As between provinces, however, the difference in the proportions of married males and females in either urban or rural areas is, in part, caused by married males sometimes residing at their places of work rather than at their homes. Other striking statistics, of conjugal condition are the great preponderance of widows compared to widowers and the large and increasing numbers of divorced or legally separated, but the reasons for these figures are more apparent.

By provinces, the percentages married or at one time married are highest in British Columbia and lowest in Quebec. The following statement illustrates the case for 1941.

PERCENTAGES OF POPULATION MARRIED, BY PROVINCES, 1941

Province	P.C. in the Married State		P.C. Sometime Married	
	Male	Female	Male	Female
Prince Edward Island.....	35.80	38.13	39.41	45.99
Nova Scotia.....	37.54	38.85	41.39	47.33
New Brunswick.....	36.35	37.74	39.78	44.68

<sup>1</sup> Includes widowed, divorced, permanently separated and not stated.

The number of persons divorced and legally separated per 1,000 population varies widely between the provinces. British Columbia leads with 4·0 for the divorced and 11·1 for the legally separated; Quebec and Prince Edward Island are at the lower end of the scale with 0·3 and 5·0, respectively, for the former and 0·4 and 4·0, respectively, for the latter. Between these extremes, Ontario shows rates of 1·4 and 8·5, respectively; Alberta, 1·9 and 7·2; Saskatchewan and New Brunswick, 0·9 and 5·2; Nova Scotia 0·9 and 6·7; and Manitoba 1·5 and 6·9.

## Section 5.—Racial Origins

A population composed of divers racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older (see under "Growth of Population", p. 77) and, excepting for the Census of 1921, has exceeded in numbers any one of the basic British Isles stocks.

It will be seen from Table 19 that, at the time of Confederation, the largest of the groups comprising the British Isles races was the Irish and that the Irish and the Scottish together outnumbered the English by almost two to one. The English, however, exceeded the Irish after 1881, while the Scottish took second place after 1911. Those of Irish origin from 1881 to 1901, increased only 3.3 p.c.: the smaller proportion of Irish to English and Scottish was due not alone to a decline in immigration but to their emigration from Canada. The relative gains from 1911 to 1921 of the British Isles races as a group brought them to over one-half (55.4 p.c.) of the total population. The English (with 28.96 p.c.) ranked first in 1921 of all races in Canada, the French were second (27.9 p.c.), the Scottish were third (13.35 p.c.), and the Irish fourth (12.61 p.c.). In 1931 the French again assumed the premier position and the English ranked second, outnumbered by 187,000, yet there were only 54 French to every 100 persons of English, Scottish, Irish and Welsh descent combined. There was a relative reduction in the British Isles races from 57.03 p.c. of the total population in 1901 to 49.7 p.c. in 1941. The causes for this relative decrease were mainly: declining immigration from the British Isles; emigration to the United States of the Anglo-Saxons, repatriation of large numbers of French Canadians from the United States, and the generally higher rate of increase on the part of the French as compared with the various Anglo-Saxon peoples. The factors of immigration and emigration are transitory and change rapidly but the rate of increase has been persistently favourable to the French.

For the British Isles races the inter-decennial increases have fallen consistently from 1911 to 1941. Between 1911 and 1921 the increase was 869,657; for the following decade it was 512,333; and from 1931 to 1941, 334,833.

The British Isles and French groups taken together now constitute 80 p.c. of the population as was the case in 1931; this compares with 83 p.c. in 1921 and 84 p.c. in 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. This pronounced decline has been due, in the main, to immigration of Continental Europeans to Canada during the past 40 years.

From the beginning of this century the proportion of the European races (other than the French) increased from 8.53 p.c. in 1901 to 17.76 p.c. in 1941. The rate was such as to more than double the numbers of the European stocks in one decade (1901-11) and was much higher for specific origins: for instance the Belgians and Scandinavians trebled; the Jews and Italians increased more than fourfold; the Poles and Finns, respectively, were numerically five and six times stronger in 1941 than in 1901.

The second decade of the century showed declining rates of growth; this period included three years of the heaviest immigration in the history of the Dominion and four years of war. The net result was that the immigrant European stock increased from 944,783 to 1,247,103 or 32 p.c. There were certain exceptions where the rates recorded for 1921 exceeded those for the previous decade.

Several significant changes occurred in the third and fourth decade, the increase for the European stocks, other than British and French, rose from 1,247,103 in 1921 to 2,043,926 in 1941 or by 63.9 p.c. With the resumption of moderate immi-

gration from Continental Europe in 1921 and the relatively higher birth rate among earlier Continental European immigrants, foreign European stocks increased nearly four and one-half times more rapidly than the British in 1921-31.

Table 20 shows the present composition of the population. The numerical strength of the principal stocks in Canada as recorded by the 1941 Census, arranged in descending order of numerical importance, is as follows:—

Racial Origin	Rank	Racial Origin	Rank
French.....	1	Ukrainian.....	6
English.....	2	Scandinavian.....	7
Scottish.....	3	Netherland.....	8
Irish.....	4	Jewish.....	9
German.....	5	Polish.....	10

Several interesting changes have occurred during the past three decades. Besides the changing numbers in the English and French stocks an important change was the moving up of the Ukrainians from eleventh place with 107,000 in 1921 to seventh place with 225,000 in 1931 and sixth place with 306,000 in 1941. This may be attributed to a high birth rate rather than to immigration. The German race ranked fifth in 1921, 1931 and 1941, but the figures, which increased from 295,000 in 1921 to 474,000 in 1931, decreased to 465,000 in 1941. Since Netherland origin has shown an abnormal increase between 1931 and 1941, it is possible that many families which were of German origin were included in this latter racial group. This tendency was also in evidence during the decade of the First World War, 1911-21.

It is of interest to find how the racial origins are represented in the populations of leading Canadian cities and in Table 21 the total populations of nine cities of Canada are analysed from this standpoint. The predominantly French complexion of Montreal and Quebec contrasts with the British Isles racial majorities of the other cities.

## Section 6.—Religions

At each census the actual numbers attached to any religious denomination, as reported by the persons enumerated, have been recorded. The development of the different denominations from an early date is traced statistically in Table 22.

Over the period from 1871 to 1941 something like 40 p.c. of the population of Canada has been of the Roman Catholic faith. This proportion has been remarkably constant over the 70 years. The 1941 percentage (inclusive of Greek Catholics) was 43.34 p.c. Methodists were 15.67 p.c. of the population in 1871 but fell to

13.19 p.c. in 1921. Presbyterians increased from 15.57 p.c. in 1871 to 16.04 p.c. in 1921; they were reinforced by the considerable immigration from Scotland after the beginning of the century. The organization of the United Church of Canada in 1925 left the Presbyterians and the Congregationalists much weaker in membership. Almost all Methodists, the main body of Congregationalists and a large number of Presbyterians united to form that Church.

The growth of the principal religious denominations in Canada from 1871 to 1941 is given by provinces, in Table 23. The denominations specified (except for "other") include about 95 p.c. of the population. The reason for omitting the details of the smaller denominations is that comparable figures for earlier censuses are practically impossible to obtain because of the numerous changes of nomenclature and re-grouping that has taken place over the years. Indeed, the changes in certain of the leading denominations caused by the organization of the United Church, that have taken place since 1921 have definitely destroyed comparability. Again, Roman Catholics for 1931 and 1941 include, respectively, 186,654 and 185,657 Greek Catholics, whereas for former censuses Greek Catholics were included with the Greek Church. Table 24 gives the corresponding information for religions as Table 21 gives for racial origins.

Among some of the numerically larger European races in Canada the leading religious denominations at the 1941 Census were: German—32.0 p.c. Lutheran, 25.0 p.c. Roman Catholic and 14.2 p.c. United Church; Ukrainian—62.3 p.c. Roman Catholic and 29.1 p.c. Greek Orthodox; Scandinavian—60 p.c. Lutheran, 17.0 p.c. United Church and 6.8 p.c. Anglican; Netherland—30.5 p.c. Mennonite, 28.1 p.c. United Church, 11.4 p.c. Anglican and 7.6 p.c. Baptist. About 81 p.c. of the people of Polish origin were Roman Catholic and 91 p.c. of the Italians reported this religious denomination. It is interesting to note that 13.6 p.c. of the Chinese stated that they belonged to the United Church and 7 p.c. to the Presbyterian Church, while 21.4 p.c. of the Japanese reported United Church as their religious denomination.

<sup>1</sup> The figures for the Census of 1931 entered opposite "Congregationalist" and "Presbyterian" represent the number not included in the "United Church".

<sup>2</sup> Greek Orthodox and Greek Catholic combined under the term "Greek Church" in 1921. In the Censuses of 1931 and 1941, Greek Catholics are included with Roman Catholics.

<sup>3</sup> Mennonites were included with Baptists in 1871 and 1881; in 1891 they were included with "other denominations".

<sup>4</sup> Included in "United Church".

<sup>5</sup> Includes 186,654 and 185,657 Greek Catholics, respectively.

<sup>6</sup> Includes 109,475 population in Manitoba, British Columbia and the Northwest Territories who are largely Indian and hence likely Pagan.

<sup>7</sup> Includes 109,475

## Section 7.—Birthplaces

The population of Canada by broad nativity groups, Canadian born, other British born and foreign born, is shown in Table 26. This table indicates that the proportion of the Canadian born to the entire population has declined during the 70 years from 1871-1941.

The effects of the large immigration at the beginning of the century are seen in all columns of the percentage figures after 1901. Whereas in 1871, 83.30 p.c. of the total population were Canadian born, 14.06 p.c. other British born, and 2.64 p.c. foreign born, the corresponding proportions in 1941 were 82.46 p.c., 8.72 p.c. and 8.82 p.c., respectively.

The smallest element in the population, viz., the foreign born other than United States born, actually shows the greatest percentage increase. These other foreign born increased rapidly from 0.85 p.c. in 1871 to 7.50 p.c. in 1931, more than doubling in absolute numbers from 1901. The declines of the group indicated for 1921 and 1941 are attributable to restricted immigration policies. (See Chapter VI.)

Table 27 gives the distribution of the population of each province, by sex and nativity. Of the total population in 1941, 4,794,439 or 81.25 p.c. of the males and 4,693,369 or 83.72 p.c. of the females were Canadian born.

A comparison of the proportions Canadian born in 1911, 1921, 1931 and 1941, shows that with minor exceptions the provinces stand in approximately the same rank at all four census dates. In the east the proportion Canadian born was only slightly smaller in 1931 than in 1921. In Ontario it was considerably smaller. From Manitoba west, on the other hand, the Canadian born constituted larger proportions of the population of every province. The explanation of these differences seems to be threefold: (1) emigration of native Canadians during the decade was relatively heavier in the Maritimes than in the other provinces; (2) a radical change occurred in the direction of current immigration from abroad, larger proportions going to the central provinces (particularly Ontario) than formerly, and smaller numbers settling in the agricultural west; and (3) the high fertility of earlier immigrants coupled with their relatively large numbers resulted in a great increase in the Canadian-born children of the foreign stocks in that part of the Dominion lying between the Great Lakes and the Pacific Coast.

In contrast with the Canadian born, the proportion of the other British born to total population shows an increase in Western Canada between 1911 and 1921. The very high proportion of British immigration that British Columbia has received is reflected in the figures. During the decades ended 1931 and 1941, notable declines have occurred in the proportions of the British-born populations of all four western provinces due again to the cumulative effects of curtailed immigration.

As in the case of the British born, persons of foreign birth still constitute very small proportions of the population in Quebec and the Maritime Provinces but a change is now taking place in all five eastern provinces where the proportions have shown consistent increase over the past 40 years.

In Western Canada the trend is just the reverse although the percentage of foreign born is still large in the case of each province west of Ontario. One reason for this change in general trend as between the west and the east is given in the census monograph on Racial Origin (p. 622, Vol. XIII Census of 1931): "As the more accessible free agricultural land is taken up, or when for any other reason agriculture becomes less attractive, immigration tends to concentrate in the urban centres, especially of the more industrialized sections of the country".

Table 28 gives the total population by country of birth for census years 1871-1941. The census, under birthplace, collects information on both the country of birth of the immigrant arrivals in Canada and the province of birth of the native-born population. These data provide information respecting the interprovincial movement of the Canadian-born population.

Comparative figures for country of birth for census periods to 1921 and those taken more recently are difficult to obtain because of the many geographical changes in Europe after the First World War; for instance, a person who early in the century migrated to Canada from a certain part of Austria or Hungary might not realize that in 1931 he should have been recorded as of Polish or Roumanian birth in line with the new national boundaries. In comparing the census figures of several decades these facts have to be considered and a regrouping of certain European countries whose boundaries were changed in later censuses is carried back to earlier censuses to maintain comparability. Table 28 is probably as far as the census can go in supplying strictly comparable figures along these lines. In this table no change has been made affecting the census figures themselves: they have been merely regrouped.

Table 29 analyses the total population by province or country of birth for census years 1921, 1931 and 1941. Table 30 takes the Canadian-born section of the population for 1941 and cross-classifies it by province of birth and province of residence. Comparable data for 1931 are to be found at p. 135 of the 1934-35 Year Book. The interprovincial movement of population as between Eastern and Western Canada is shown by province of birth for the Censuses 1911 to 1941 in Table 31.

## Section 8.—Rural and Urban Population

For the purposes of the Census, the population residing in cities, towns and incorporated villages has been defined as 'urban' and that outside of such localities as 'rural'. The distinction between rural and urban populations in Canada, therefore, is a distinction of provincial legal status rather than of size of aggregation of population within a limited area. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban,\* the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion.

This basis of comparing rural and urban populations, which is adhered to throughout the census analyses, is, then, adopted for Canada, not because it is best, but because the necessary comparable data over a long period of years required for comparison by degree of urbanization does not exist. Obviously, the populations of villages of less than 1,000 cannot be regarded as truly urban, although there is reason, for certain purposes, to distinguish them from the surrounding rural populations, in that they enjoy definite cultural advantages not possessed by the strictly rural municipalities.

\* In Saskatchewan the original legislation of 1908 provided that a community of 50 persons on an area not greater than 640 acres might be incorporated. Several amendments have since been made and as the Act now stands, 100 people resident on an area not greater than 240 acres may be incorporated. The Ontario law, on the other hand, requires that a village before it can be incorporated must have a population of 750 on an area not exceeding 500 acres.

To overcome some of the difficulties involved, and to provide a basis for comparison by size with other countries, Table 35 has been prepared. These data enable places outside any required size limits to be readily excluded. Similar data, by provinces, will be found in Volume II of the Census of 1941.

The actual percentages of the urban population resident in incorporated centres of less than 1,000 is shown in the statement below. The percentages are high for the Provinces of Saskatchewan and Alberta where the laws pertaining to incorporation are very much less rigid than in the industrial east.

URBAN POPULATIONS AND PERCENTAGES OF TOTAL IN CENTRES OF LESS THAN 1,000 POPULATION

Province	1921			1931			1941		
	Total Urban Population	In Centres less than 1,000 Pop.	P.C. of Urban Population in Centres less than 1,000 Pop.	Total Urban Population	In Centres less than 1,000 Pop. CANADA	4,352,122	375,058	8.62	5,572,058	411,157	7.38	6,252,416	398,813	6.38

A study of Canadian data and similar statistics for the United States taken in 1940 leads to the conclusion that Canada, although far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, viz., 54.3 p.c. in Canada as compared with 56.5 p.c. in the United States. There are, however, significant differences between Canada and the United States in regard to individual size classes. At the Census of 1940, the United States had 28.9 p.c. of its population resident in cities of 100,000 or over, while Canada, in 1941, had only 23.0 p.c. of its population in places of equal size. The United States had an additional 18.8 p.c. of its population residing in cities of between 10,000 and 100,000 population, and 5.1 p.c. of its population resident in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 15.5 p.c. and 4.4 p.c., respectively, of its population. In the United States 53 p.c. of the population resided in places of 5,000 or over (comparable figures for smaller places are not readily available) as compared with 43 p.c. of the population of Canada, showing the much higher degree of urbanization that has been reached in the United States—a natural occurrence in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table 32 that from 1931-41, as in the previous decade, urban communities absorbed nearly 60.22 p.c. of the total increase in population with the result that the urban population of Canada in 1941 exceeded the rural by 998,177. Out of every 1,000 persons in the country, 457 were resident, on June 2, 1941, in rural and 543 in urban communities, as compared with 463 in rural and 537 in urban communities on June 1, 1931; 505

in rural and 495 in urban as on June 1, 1921; 546 in rural and 454 in urban on June 1, 1911; 625 in rural and 375 in urban on June 1, 1901; and 682 in rural and 318 in urban on June 1, 1891.

It is seen that during the latest four decades there has been a radical shifting in the distribution of the Canadian population as between urban and rural districts. The change has been continuous throughout the period. During the decade ended 1941 the proportion has increased from 53·70 p.c. to 54·34 p.c. In this urban flow of population Canada is by no means unique. The same change has characterized virtually all western nations to a greater or lesser degree during the past century.

The information regarding rural and urban residence was enlarged upon in the Census of 1941. Every person stated not only his province of birth, but also whether he was born in a rural or urban municipality, the length of residence in the rural or urban municipality in which he was enumerated, the province or country of previous residence, and whether this was in a rural or urban municipality. This information will enable a closer study to be made of urbanization and its causes.

During the past decade, the continual growth of manufacturing and industrialization has accounted for the movement of population, the extent of which is shown in Table 34. Of all provinces in the Dominion, Quebec shows the largest urban percentage followed by Ontario; Prince Edward Island has the largest percentage of rural population.

The immigrant population is analysed in its rural and urban aspects in Table 37 in regard to birthplace and sex. Several interesting conclusions may be drawn from the resulting data.

Table 38 gives for all urban centres of 15,000 or over the numbers and proportions that are of Canadian birth and those born outside Canada. As is to be expected, the percentages of those born outside Canada are in general much greater in western than in eastern cities.

Summary figures showing the disparity between the sexes in the matter of urban concentration in 1921, 1931 and 1941 in the total population are given in the following tabulation. Where the percentage of urban males is large the percentage for the females is also large. Each decade emphasizes the greater opportunities for female employment in urban centres as compared with rural.

SEX DISTRIBUTION FOR TOTAL AS COMPARED WITH THE URBAN POPULATION

Item	1921	1931	1941
Excess of all males to all females per 100 of total population.....	3·09	3·59	2·56
Percentage of all females in urban centres to all females.....	51·78	55·98	56·61
Percentage of males in urban centres to all males.....	47·41	51·57	52·18
Excess of urban females to urban males per 100 of urban population.	1·32	0·52	1·52

Table 39 shows the distribution of urban population in Canada by size of urban centres, the rural-urban trend is very strongly indicated by the increased size of the larger cities and towns at a time when immigration, which in former decades, (especially that of British origin) tended to concentrate in urban centres, was negligible.

Montreal, the largest city in Canada, increased by 84,430 in the decade 1931-41, from 818,577 to 903,007; Toronto, the only other city of over half a million population, increased by 36,250 from 631,207 to 667,457. Vancouver and Winnipeg went up to 275,000 and 222,000, respectively; Hamilton, Ottawa and Quebec were all over 150,000; Windsor over 100,000; and the western cities of Edmonton and Calgary over 93,800 and 89,000, respectively. These latter cities exceeded London, which also came in the 75,000 to 100,000 class in 1941.

The populations of urban communities with 1,000 to 5,000 each in 1941 are given for 1901 to 1941 in Table 40.

All the larger cities have in their neighbourhoods growing 'satellite' towns or other densely settled areas in close economic relationship with the central municipality. It has, therefore, been advisable to calculate the total populations for the metropolitan areas of these greater cities. The statement below shows comparative figures for 1931-41.

POPULATIONS OF GREATER CITIES IN 1941 COMPARED WITH 1931

Greater City	1941	1931
Montreal.....	1,139,921	1,023,158

<sup>1</sup> Includes birthplace "not stated".

### 39.—Urban Centres having Populations of 5,000 or Over, Decennial Censuses 1871-1941

NOTE.—Urban centres in which a Board of Trade exists are indicated by an asterisk(\*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been re-arranged to cover the same area as in 1941.

**Rural and Urban Farm Population.**—Figures under this heading are not available for this edition of the Year Book. Data covering the 1931 Census will be found at p. 156 of the 1934-35 Year Book, and corresponding figures for the 1941 Census in final form will, no doubt, be available for the 1945 Year Book.

### Section 9.—Citizenship, Naturalization and Movement of Population

The basic legal definition of Canadian nationality is to be found in the Immigration Act, which defines a Canadian citizen as a person included in one of three categories: (1) a person born in Canada, who has not subsequently become a citizen of a foreign State; (2) any British subject who has been domiciled for five years in Canada; (3) any subject of a foreign power who has become naturalized and has not subsequently become an alien or lost Canadian domicile (R.S.C. 1927, c. 93; 21-22 Geo. V, c. 39).

The part that Canada played in the negotiating of the Peace Treaty and the subsequent enrolment of Canada as a member of the League of Nations necessitated an enlargement of the terms of the Immigration Act. In other words, there arose the need of an official definition of the term "Canadian citizen" as distinct from "British subject"—a definition that would be internationally recognized. An Act was accordingly passed entitled "An Act to Define Canadian Nationals and to Provide for the Renunciation of Canadian Nationality" (R.S.C. 1927, c. 21).

This Act defines a Canadian national as (1) any British subject who is a Canadian citizen within the meaning of the Immigration Act; (2) the wife of any such person; and (3) any person born out of Canada whose father was a Canadian national at the time of such person's birth, or, with regard to persons born before the passing of the Act, any person whose father at the time of such birth possessed all the qualifications of a Canadian national as defined in the Immigration Act.

It will be seen from this that Canadian nationality has several bases. No one can now be a Canadian citizen without being a recognized British subject in any part of the World, although there was a time when persons were admitted to naturalization in Canada who could not qualify as British subjects outside of Canada.

The Imperial Naturalization Act came into force on Jan. 1, 1915, and since Jan. 1, 1918, it is the only method of naturalization. Persons naturalized under this Act are entitled to all the political and other rights, powers and privileges, and are subject to all the obligations, duties and liabilities, of a natural-born British subject, and from the date of naturalization have the same status as a natural-born British subject.

The Naturalization Act (R.S.C. c. 138) has since been amended with regard to the national status of married women (see 21-22 Geo. V, c. 39). By this amendment which came into force on Jan. 15, 1932, a woman who is a British subject shall not, by reason of her marriage to an alien, cease to be a British subject if, within six months, or in special circumstances with the consent of the Minister within a longer period than six months, she makes declaration that she desires to retain British nationality. The change this amendment has made in the status of married women is a very important one.

Citizenship of native-born, British-born and foreign-born by country of allegiance and other analyses, such as naturalized and aliens by countries of birth and racial origin, were not available at the time this section of the Year Book went to press, but, of the preliminary compilations that have so far appeared, the following summary table showing broadly the citizenship of total population—including all aliens according to country of allegiance—by provinces, has been compiled.

<sup>1</sup> Includes persons with period not stated in 1941.  
<sup>2</sup> Not available from 1931 Census.  
<sup>3</sup> Includes aliens with country of allegiance not stated in 1941.

**Movement of Population.**—In the Census of 1941 data were collected for the first time regarding movement of population and length of residence in the province of residence. Three questions were asked on the census schedules. The first was concerned with the length of residence of the individual concerned in the province where he or she resided on June 2, 1941. The second question required information as to the province or country of last residence and the third related to the rural or urban classification of the present or past place of residence. The following tables summarize the information.

#### 42.—Number of Years in Present Province of Residence, Rural and Urban, by Provinces, 1941

<sup>1</sup> Total population not always residing in the province in which residing on the census date, June 2, 1941.

<sup>2</sup> Includes Yukon, the Northwest Territories and "not stated".

The above table presents the movement of Canadian population in broad outline only: it gives the movement for Canada as a country only, under the sub-heading (interprovincial movement), that is the movement within Canada itself, and the movement from outside Canada. Thus within Canada 16,208 individuals (8,532 males and 7,676 females) at the time of the Census in 1941 reported Prince Edward Island as their province of last residence: at some time before that census they had moved from Prince Edward Island to another part of Canada. Taking into account the movements to and from each of the other provinces, the total interprovincial movement was 1,308,944.

At the 1941 Census 1,898,347 persons resident in Canada at the date of the Census reported themselves as having come from outside the Dominion—824,060 from the British Isles, 61,687 from the United States, etc. Adding together inter-provincial movement and movement from outside, a total movement of 3,207,291 was reported.

In order to get a complete picture of the movement of population, it would, of course, be necessary to show for each province the data shown above for Canada and with this the reader would see exactly from which provinces and to which provinces the movement had taken place. The reader is referred for such provincial information to the more detailed census publications.

### Section 10.—Languages and Mother Tongues

Official languages are not to be confused with mother tongues. Mother tongue, being used in the home, is natural to a person even if he is unable to speak it on account of youth, infirmity or for some other reason, whereas the official language or languages are those recognized by statute for general use. Thus the immigrants to a new country bring with them their mother tongues and continue to use them in their homes, but these have no relation to the official languages in the country of their adoption.

Canada is officially bilingual, the two languages being English and French. In the Census of 1941, 1,474,009 persons were reported as speaking both the official languages, 7,735,486 speaking English only of the two official languages, 2,181,746 speaking French only of the two official languages and 115,414 as unable to speak either English or French.

Table 44 shows the extent to which the people of foreign origin have related themselves to the languages spoken by those of British and French origins in Canada. Comparable data for the English language alone is shown in the first and third columns of Table 45. The public school system is responsible for most of the progress. It is true that many of the adult immigrants, especially in urban parts, do acquire a working knowledge of one or other of the official languages, provided they are not too old to do so and they have an adequate economic or other incentive.\*

The percentages in this table apply to the total population of each origin. All children in Canada are required by law to attend school to at least 14 years of age and teaching in the schools is carried on in either English or French. Consequently, in an origin group with high fertility the percentage unable to speak either of the basic languages of the country may be expected to decline with a fair degree of rapidity provided current immigration is not heavy.

Persons of Scandinavian origin speak either English or French in the largest proportions. Most of them speak English; comparatively few speak French. The Germans followed the Danes, Norwegians and Swedes, with only a slightly larger percentage unable to speak either of the basic languages.

Mother tongues spoken are dealt with in Table 46 which shows that 1,663,712 persons did not have either English or French as a mother tongue. The largest number of persons speaking a foreign language as a mother tongue is in Ontario with 425,189, but the highest percentage is in Saskatchewan with 39 p.c.

\* Were the data tabulated by five-year age groups, one would find ample statistical support for this statement.

#### 44.—Percentages Unable to Speak English or French, for the Principal Non-British and Non-French Racial Origins, 1931 and 1941

Racial Origin	P.C. Unable to Speak English or French		Racial Origin	P.C. Unable to Speak English or French

## Section 11.—School Attendance

The following table summarizes school attendance of the total population of Canada as recorded in the 1941 Census. Persons shown "at school" are those who attended school anytime between Sept. 1, 1940, and the date of the Census, viz., June 2, 1941. Most of the population reporting school attendance are between 5 and 15 years of age and it will be seen from the distribution of years of schooling that pupils with over 17 years of schooling constitute only 0.74 of the population. Again, most of the persons for whom less than 5 years of schooling were reported are children under 10 years of age: the total number of children under 10 years of age in the population as recorded in the Census of 1941 was 2,097,674 and the total number of persons of the population with less than 5 years of schooling was 3,245,582, thus there were approximately 1,147,900 persons of 10 years of age or over, or about 10 p.c. of the population, who reported less than 5 years of schooling.

47.—Years at School for the Total Population, 1941

## Section 12.—Blind and Deaf-Mutes

Detailed statistics of the blind and of deaf-mutes are given for the 1941 Census in bulletin form. For previous censuses earlier editions of the Year Book should be referred to:

**Blind.**—A general test which took the form of a block of large blackfaced letters on the Census schedule\* was used to determine the blind. In the case of children under 10 years of age, or older persons who were illiterate, inability to distinguish or count the fingers of one hand at a distance of twelve feet was alternatively adopted. Those who had lost the sight of one eye only were not regarded as blind. The blind in the nine provinces in 1941, not including 158 blind deaf-mutes, as shown in Table 48, numbered 9,962 or 8.7 per 10,000 of the population as compared with 3,266 or 6.1 in 10,000 at the beginning of the century.

**Deaf-Mutes.**—Deaf-mutism, unlike blindness, is preponderantly an infirmity originating at birth or an early age. The number of deaf-mutes in the nine provinces of Canada increased from 5,368 in 1881 to 7,194 in 1941.

\* See census schedule Form 8, 1941 Census.

### Section 13.—Occupations of the Canadian People

Final statistics under this heading were not yet available from the 1941 Census when this Chapter went to press—see Appendix III.

### Section 14.—Dwellings and Family Households

Final figures under this heading were not yet available from the 1941 Census at the time of going to press.

### Section 15.—Quinquennial Census of the Prairie Provinces

The reader is referred to pp. 146-152 of the 1937 edition of the Year Book and to pp. 110-112 of the 1939 Year Book for results of the latest quinquennial census or to Volumes I and II of the 1936 Census.

### Section 16.—Annual Estimates of Population

While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern States for many purposes, such as the calculation of birth, death and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of post-censal populations are adopted. For example, it is possible, with good vital statistics and records of arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and subtracting deaths and departures during the period elapsed since the census. This method is impracticable for Canada, with 4,000 miles of common boundary line with the United States, crossed in both directions every day by many thousands of people. In almost all civilized countries, the actual methods of making the estimates vary. Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the latest quinquennial or decennial intercensal period. In the case of Canada annual figures of population were purely estimates, made on the basis of past increases, prior to the Census of 1931. They have now been worked out on a basis that takes into consideration collateral data back to 1867, and the resulting figures are believed to state the populations at intercensal periods more accurately than any published prior to 1931.

The method upon which calculations are now based is described at pp. 108-109 of the 1932 Year Book.

51.—Estimates of the Population of Canada, by Provinces, Intercensal Years, 1922-43

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figures. Figures for 1867-99 will be found at p. 141 of the 1936 Year Book, and those for 1900-21 at p. 103 of the 1940 edition.

<sup>1</sup> The totals, especially for population, are approximations only since most of the figures are estimates.

<sup>2</sup> Inclusive of 228,307 sq. miles of fresh water. <sup>3</sup> Census figure. <sup>4</sup> Figures do not include the aboriginal population, estimated at 60,000. <sup>5</sup> Not including Burma, no longer a part of India since Apr. 1, 1937 (Burma Act 1935).

<sup>6</sup> Not including military forces. <sup>7</sup> Figures from "Statesman's Year Book, 1943". <sup>8</sup> Inclusive of 13,616 sq. miles of water within the territorial limits of the Uganda Protectorate.

<sup>9</sup> Inclusive of 10,353 sq. miles of water within the territorial limits of the Nyasaland Protectorate. <sup>10</sup> Not including the Aden Protectorate (about 116,000 sq. miles).

<sup>11</sup> Including Ocean and Christmas Islands. <sup>12</sup> By an Order of Council of Dec. 20, 1939, Dominica, which formed part of the Leeward Islands, is comprised in the Windward Islands as from Jan. 1, 1940.

## Section 18.—Area and Population of the World

Statistics showing the areas and the populations of the various continents, and details of each country, as in 1931, are given in a table at pp. 168-169 of the 1934-35 Year Book.

## CHAPTER V.—VITAL STATISTICS\*

### CONSPECTUS

	PAGE		PAGE
SECTION 1. BIRTHS.....	143	Subsection 1. General Mortality.....	159
SECTION 2. MARRIAGES AND DIVORCES.....	154	Subsection 2. Infant Mortality.....	165
Subsection 1. Marriages.....	154	Subsection 3. Maternal Mortality.....	169
Subsection 2. Dissolutions of Marriage (Divorces).....	158	SECTION 4. NATURAL INCREASE.....	171
SECTION 3. DEATHS.....	159	SECTION 5. VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES.....	174

A short historical outline of the early collection of vital statistics in Canada is given at pp. 104-105 of the 1940 edition of the Year Book. Co-operation of the provinces in the collection of comparable statistics was finally effected as a consequence of the establishment of the Dominion Bureau of Statistics, under the Statistics Act of 1918. From 1921 to 1925 vital statistics were compiled by the Bureau on a comparable basis for all provinces with the exception of Quebec. Quebec has been included in the registration area only as from Jan. 1, 1926, from which date statistics have been on a comparable basis in all provinces.

The main tables of Sections 1-4 that follow cover statistics for all the provinces. Section 5 deals with those of Yukon and the Northwest Territories and reasons for this separation are given at that place.

An important factor should be borne in mind by the student who uses either the tables that follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. The differences in the age and sex distribution of the population in different provinces make comparisons of crude birth rates and crude death rates not strictly accurate. All rates in this Chapter have been calculated on the basis of the estimates of population given at p. 141.

### Section 1.—Births

The recent history of birth rates in most countries has been one of decline with varying rapidity, although consequent reductions in the rates of natural increase have been partly offset by synchronous declines in the death rates. Since 1939, however, available statistics would seem to indicate that the rapid and consistent decline in birth rates generally has been arrested.

The crude birth rate for England and Wales, for example, was 25.1 in 1910, and, though it rose to 25.5 in 1920, it fell quite rapidly by almost continuous stages to 14.4 in 1933. The lowest figure so far recorded was 14.2 in 1941. Similarly, in France the crude birth rate moved from 19.6 in 1910 to 21.4 in 1920, 18.0 in 1930 and 13.0 in 1941. In Germany the crude birth rate was 29.8 in 1910, 25.9 in 1920, 17.6 in 1930 and 14.9 in 1942.

\* The material in this chapter has been revised by J. T. Marshall, Chief of the Vital Statistics Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXX, Sect. 1, under "Population".

In the Allied countries since the outbreak of war and in enemy countries following the rise of Nazi domination the birth rates have risen quite sharply. In Germany the birth rate had risen to 20.0 by 1940, while in Austria the birth rate, which had dropped to 12.8 in 1937, had risen to 21.8 by 1940. Similarly in England and Wales the birth rate has risen under the impetus of war from 14.6 in 1940 to 15.8 in 1942.

In Canada, when the registration area was established in 1921, the crude birth rate was 29.4; by 1931 the rate had declined to 23.2 and by 1937 to 19.8. In 1941 and 1942 the rate stood at the comparatively high figures of 22.2 and 23.4, respectively. The recovery during the past few years has been fairly general in all provinces, with variations ranging from the low rates in British Columbia of 18.4 in 1941 and 19.3 in 1942 to the high rates of 26.8 in New Brunswick and Quebec in 1941 and of 28.0 in Quebec in 1942.

The relative positions occupied by Canada and its individual provinces among various countries of the world with respect to crude birth rate (the annual number of births per 1,000 of population) are given in Table 1.

<sup>1</sup> Provisional or approximate figure.

<sup>2</sup> Within the boundaries of the Treaty of Trianon.

The birth statistics indicate that there is a tendency towards greater hospitalization and medical attendance at births and that the numbers of births in the urban areas of Canada (cities and towns of 1,000 population or over) are increasing more rapidly than births in the rural parts. Live births in cities, towns and villages of 10,000 population or over are given in Table 2.

**Sex of Live Births.**—Every province shows an excess of male births for the years or averages shown in Table 3. Out of every 1,000 children born alive in Canada in 1941 there were 514 males and 486 females, and in 1942 there were 516 males and 484 females. In other words, the number of males born to every 1,000 females during the period 1926-42 has ranged from 1,047 in 1935 to 1,067 in 1942.

**3.—Live Births by Sex, and Ratio of Males to Females, by Provinces, 1941 and 1942, with Five-Year Averages, 1921-40**

NOTE.—Comparable figures for the single years 1921-40 will be found in previous Year Books commencing with the 1927-28 edition.

<sup>1</sup> Quebec was not included in the registration area prior to 1926.

**Nativity of Mothers.**—The influence of the limited immigration in recent years is reflected in the figures of Table 4. In the Prairie Provinces of Manitoba, Saskatchewan and Alberta, the percentages born to foreign-born mothers in 1933 were 25.9, 36.3 and 40.4, respectively; in 1942 they were 10.3, 14.7 and 18.6, respectively. Thus there is a heavy percentage decline in the number of first-generation children born in the West.

<sup>1</sup> Exclusive of the Territories.

**Fertility Rates.**—The crude birth rate of a young country is subject to influences that vitiate comparison with older lands. These influences are the result, to some extent, of differences in age or sex constitution or in conjugal condition. For this reason birth rates are frequently based on the number of births per thousand women within suitably chosen age groups. Such rates are commonly known as fertility rates. At pp. 150-152 of the 1936 Year Book specific fertility rates of married women between the ages of 15 and 49 years are given, by provinces, for 1921, 1922 and 1930-32. See also the article at pp. 100-115 of the 1942 Year Book.

**Multiple Births in Canada.**—During the seventeen-year period 1926-42, out of a total of 4,061,687 recorded confinements, 48,082 or one in 84.5 were multiple confinements. Of these 47,641 were twin and 437 were triplet confinements, while one, in British Columbia in 1931, was a quadruplet confinement from which all the children died within a few hours of birth. A multiple confinement resulted in the birth of quintuplets in 1934. In 1937 there were 2 quadruplet confinements in Quebec, all children being born alive.

In the years 1941 and 1942, one confinement in every 90 and 92, respectively, was a twin confinement, a proportion that is fairly representative for the other years of the period. There were 22 triplet confinements in 1941 and 26 in 1942. In 1941, of the children born (alive or dead), one child in every 45 was a unit of a multiple birth and in 1942 the proportion was one in every 46. Children born alive numbered one in 46 and 47, while for stillborn children the proportions were one in 21 and one in 26, respectively, for the years 1941 and 1942. Stillborn children resulting from multiple confinements formed 5.7 p.c. in 1941 and 4.5 p.c. in 1942 of the total children born, as against 2.6 p.c. and 2.5 p.c. in single confinements.

### 5.—Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1941 and 1942

NOTE.—For statistics for the years 1926-35, see p. 162 of the 1938 Year Book and for the years 1936-40, see p. 119 of the 1942 Year Book.

Year and Sex	Total Births		Single Births		Twins			Triplets		
	Born Alive	Still-born	Born Alive	Still-born	Total	Children		Total	Children	
						Born Alive	Still-born		Born Alive	Still-born

**Ages of Parents.**—The numerical distribution of legitimate live births by ages of parents for the years 1941 and 1942 is shown in Table 6. Nearly 34 p.c. of the births in 1941 and 1942 were to married mothers under 25 years of age, while less than 5 p.c. were to mothers who had passed their 40th birthday. Of the fathers 12.7 p.c. and 12.8 p.c. were under 25 years in 1941 and 1942 and 15.8 p.c. and 15.5 p.c. were 40 years or over. The percentages of both fathers and mothers under 25 years were 22.9 and 23.0, respectively, in the years 1941 and 1942.

<sup>1</sup> Less than one-tenth of one per cent.

**Birthplaces of Parents.**—Table 7 furnishes some idea of the extent that the coming generation of Canadian born will be the offspring of Canadian-born, British-born or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. The percentage of births for which both parents were born in Canada rose from 61.4 in 1926 to 75.7 in 1941 and 76.6 in 1942.

### 7.—Numbers and Percentages of Live Births to Fathers and Mothers Born in Specified Countries, 1926, 1941 and 1942

NOTE.—Comparable statistics for earlier years, after 1926, will be found in previous Year Books commencing with the 1929 edition.

<sup>1</sup> Less than one-tenth of one per cent.<sup>2</sup> Includes the Ukraine.<sup>3</sup> This figure gives the number of children whose fathers and mothers were born in the same country. The difference between this figure and the total number of births represents the number of children whose fathers and mothers were born in different countries.<sup>4</sup> This excludes the percentage of mixed parentage, i.e., where the two parents were not born in the same country.

**Origins of Parents.**—Table 8 gives the numbers and percentages of births in 1926, 1941 and 1942 contributed by the principal racial groups. The table indicates the part played by each racial group in the production of the births of each year and shows the comparison of the figures for father and mother with those in which both parents were of the same origin.

### 8.—Numbers and Percentages of Live Births to Fathers and Mothers of Specified Origins, 1926, 1941 and 1942

NOTE.—Comparable statistics for earlier years, after 1926, will be found in previous Year Books commencing with the 1929 edition.

<sup>1</sup> Less than one-tenth of one per cent.<sup>2</sup> Including all Ruthenian Russians.<sup>3</sup> This figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers were of different origins.<sup>4</sup> This excludes the percentage of mixed parentage, i.e., parents not of the same origin.

**Illegitimacy.**—The steady increase of illegitimacy that is noticeable in recent years is due, in some measure, to the more complete registration of children born out of lawful wedlock. This has been brought about through the co-operation and by an intelligent human approach to the problem of illegitimacy by the social welfare agencies and provincial registration officials.

Of the 255,317 live births in the nine provinces of Canada in 1941, 10,101, or 3.96 p.c., were registered as the issue of unmarried mothers. Figures for 1942 show a total of 272,313 live births, of which 11,088, or 4.07 p.c., were registered as the issue of unmarried mothers. Out of this number, 5,759 were males and 5,329 females—a ratio of 1,081 males to every 1,000 females, as compared with 1,044 males per 1,000 females in 1941, and a general 1942 rate for all live births of 1,067 males to 1,000 females.

## Section 2.—Marriages and Divorces

### Subsection 1.—Marriages

The marriage rate in most countries is influenced appreciably by the general economic prosperity level. Immediately following the declaration of war, sudden abnormal rises were apparent all over the world. These high marriage rates, for the most part, have been maintained under existing war conditions with its impetus of full employment and high ratio of enlisted population.

In Canada, marriages reached a peak in 1929 after which recession was steady until 1932; in 1933 the decline was arrested slightly (by 2 p.c.); in 1934 a definite improvement was apparent (17 p.c.), and was maintained until 1939 when the marriages jumped 66 p.c. over those occurring in 1932. In 1941 and 1942 the increases were 95 p.c. and 104 p.c., respectively, over the 1932 low point. Provincial marriage trends have been consistent with that for the whole Dominion.

**Age at Marriage and Marital Status.**—The average age of all bridegrooms in the Dominion in 1941 was 28.9 and in 1942, 29.0, while that for all brides was 25.1 in 1941 and 25.2 in 1942. The average excess of the bridegroom's age was, therefore, 3.8 years in both years. Out of each 1,000 bridegrooms in 1941, 952 were bachelors, 37 widowers and 11 divorced men; out of each 1,000 brides 963 were spinsters, 27 widows and 10 divorced women, while in 1942 there were 951 bachelors, 38 widowers, and 11 divorced men and 960 spinsters, 28 widows and 12 divorced women. The distribution of marriages by sex, age and marital status for 1941 and 1942 is given in Table 11. A comparison between the figures of divorces granted, as shown in Table 15, and the number of divorced persons re-married shows that divorces granted in 1941 and 1942 numbered 2,461 and 3,089, respectively, while there were 1,269 and 1,414 divorced males and 1,213 and 1,489 divorced females, respectively, married again. This, of course, does not mean that these were the same persons as were divorced in 1941 and 1942.

**Nativity of Brides and Bridegrooms.**—When the registration area was established in 1921 the majority of marriages solemnized in the western provinces were between persons born outside of Canada. This situation has rapidly reversed as the percentage of foreign-born bridegrooms and brides show a general reduction (see Table 12). Both Canadian-born brides and bridegrooms are now in the majority in each province, while in the Maritime Provinces, Quebec and Ontario they show a marked predominance. Taking Canada as a whole, 88 p.c. of all bridegrooms and 92 p.c. of all brides in 1941 and 1942 were born in Canada; the 1942 figures are the highest percentage shown for any year of the period covered by the statistics.

### 12.—Percentage Distribution of Grooms and Brides, by Nativity and Provinces, 1941 and 1942, with Five-Year Averages, 1921-40

NOTE.—For figures for single years 1921-40, see previous editions of the Year Book beginning with the 1929 edition.

**Marriages by Religious Denominations of Contracting Parties.**—The distribution of the marriages solemnized in 1941 and 1942, respectively, according to religious denominations, is roughly the same as that for the total population. The figures in Table 13 indicate the very strong influence that religious belief has on brides and grooms. The ratio of grooms marrying brides of the same denomination in 1942 was over 50 p.c. with the exception of Baptists, Lutherans and Presbyterians, which showed percentages of 44·71, 42·68 and 36·68, respectively. On such a percentage basis, the Jewish faith ranks first with 93·81 of the grooms marrying Jewish brides, the Roman Catholics are a close second with 89·71; Greek Catholics and Eastern Orthodox are in third and fourth places, each with between 70 p.c. and 60 p.c., while United Church and Anglicans have each between 65 and 50 p.c.

#### Subsection 2.—Dissolutions of Marriage (Divorces)

For many years subsequent to Confederation, the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in each of these years.

One effect of the War of 1914-18 was to increase divorce. The causes were the generally unsettling psychological influences of the war period, and the long separations between men on active service and their wives. The provision of new facilities for obtaining dissolution of marriage was another factor in the numerical increase of divorces granted. A decision of the British Privy Council in 1918 gave jurisdiction to the Prairie Provinces for granting dissolutions of marriage, so that Ontario, Quebec and Prince Edward Island were then the only provinces in which the applicant for divorce had to secure a private Act of Parliament. In 1930 an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce matters to the Supreme Court of Ontario.

In 1918 there were 114 divorces granted in Canada and from then on they grew steadily in number to 608 in 1926, 700 in 1931, 1,570 in 1936, and 2,369 in 1940. In 1941 divorces granted in Canada numbered 2,461 and in 1942, 3,089. These numbers, for the most part, cover final decrees of dissolution of marriage which alone constitute divorce. Annulments and legal separations have been eliminated. Coincident with the transfer of jurisdiction in divorce matters in Ontario from the

Parliament of Canada to the Supreme Court of the Province there was a decrease in the number of divorces. This was occasioned by the delay between the granting of the decree nisi and the decree absolute. In 1938, however, the number of divorces granted passed the two-thousand mark which, for the most part, was occasioned by the increases in Ontario and British Columbia. From 1921 to 1941 and 1942, respectively, there were increases of 341 and 454 p.c.

Statistics of dissolutions of marriage granted were revised in 1941 through the co-operation of the provincial authorities and the Clerk of the Divorce Committee of the Senate of Canada.

### Section 3.—Deaths

Disregarding the effects of wars and their aftermath, the past century has seen a decline in the death rate in the countries of the white world. Perhaps the most impressive index of this decline is found in the mortality statistics of Sweden, where the crude death rate declined from an average of 27.4 per 1,000 in the decade 1751-60 to 14.3 in the decade 1911-20, and to 11.7 in 1931-40.

In England and Wales, the crude death rate which was 18.2 per 1,000 in the 90's of the past century, declined to 15.4 in the first decade of the present century and 12.1 in the third; in 1941 it was 12.9 and 11.6 in 1942. In Scotland the average rate was 22.1 in the 60's, 18.6 in the 90's, 15.1 in the first decade of the present century, and 13.7 in the third; it was 14.5 in 1941 and 13.3 in 1942. International comparisons of crude death rates for different countries are shown in Table 20, p. 164.

There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15.3 per 1,000 owing to the influenza-pneumonia epidemic, as against 12.0 in 1917 and 11.9 in 1919. Over a period, however, these abnormalities are reduced to negligibility.

#### Subsection 1.—General Mortality

Deaths in Canada as a whole declined steadily for the period 1931-34, but for 1935, 1936 and 1937 there were substantial increases. The figure for the latter year was 113,824, an increase of more than 9,000 over 1931. For 1938 there was a noticeable reduction to 106,817, but increases were again shown for the next three years, to 114,639 in 1941. In 1942 there was another decrease to 112,978.

Since the introduction of a comprehensive vital statistics system, there has been a similar definite downward trend from the crude death rate of 11.5 per 1,000 population in 1921 to 10.7 in 1930, and 9.8 in 1940. In 1941 the rate rose slightly to 10.0 but dropped again in 1942 to 9.7. The improvement has been general in all provinces, particularly in Quebec. The increase in the number of deaths, and the death rate in 1941 was due to a higher mortality rate for certain communicable diseases.

**Age and Sex Distribution of Decedents.**—Numerically speaking, for both sexes, the greatest number of deaths occur during the first year of life, although some startling reductions have been made in recent years. It will be seen in Table 16 that the average ages of decedents have been increasing steadily and that, for the most part, the ratios of deaths over 60 years have not diminished. On the other hand striking reductions have been apparent in the earlier years of life, particularly under 30 years of age. While much has been accomplished through the methods of therapeutic and preventive medicine, it must be remembered that the declining death rate in the younger ages is in a large measure responsible for the ageing of the population in Canada.

**16.—Deaths by Sex, for Specified Age Groups, 1941 and 1942, with Five-Year Averages 1926-30**

The table shows that out of every thousand deaths in Canada in 1941 and 1942, respectively, 557 and 558 were males and 443 and 442 were females, or a ratio of 1,257 and 1,261 males, respectively, to every thousand females. The table indicates the percentage changes in the age and sex groupings for all deaths.

**Standardized Death Rates.**—While crude death rates give the actual mortality per 1,000 of population, death rates in infancy and old age are much higher than in middle life, hence, differences in the sex and age composition of the population in different communities and the variations in the proportions of infants and elderly people to the total population and to total deaths make the use of crude death rates unsatisfactory for purposes of comparison. It is expedient, therefore, when comparing death rates of countries and communities to eliminate the influences of such factors and to determine what the death rates would be if the age and sex composition of the several populations corresponded to that of a particular community taken as a standard. The method is described briefly on p. 90 of the 1941 Year Book and has been applied to the population of the nine provinces of Canada, for the years 1921-38. The rates for individual years have been calculated directly from proportions shown in each sex and age group at the Censuses of 1921 and 1931. Later figures were not available at the time of going to press.

<sup>1</sup> Data for years after 1938 are subject to a wide margin of error and have not been calculated

<sup>2</sup> Quebec was not included in the registration area prior to 1926.

**Causes of Death.**—Nearly 89 p.c. of the deaths recorded in Canada in the years 1940-42 were due to the 28 specified causes named in Table 18. In this table the groupings are in accordance with the revisions of the International Lists in 1929 and 1938. These revisions were first applied to Canadian vital statistics for the years 1931 and 1941, respectively. Each revision of the International List creates special difficulties in preserving continuity. The figures have been adjusted for purposes of comparison. In any analysis of the relative importance of the causes of death the effects of the ageing of the Canadian population should be considered. These effects are described briefly at pp. 91-92 in the 1941 Year Book.

**18.—Deaths and Death Rates per 100,000 Population in Canada, by Principal Causes, 1940-42**

NOTE.—Figures for 1941 and 1942 are not completely comparable with those for previous years due to the disturbance in distribution caused by changes in class and re-arrangement of titles recommended in the fifth revision of the International List of Causes of Death.

International List Number <sup>1</sup>	Cause of Death	Numbers of Deaths			Rates per 100,000 Population

<sup>1</sup> The numbers given in this column refer to the International List of Causes of Death, as revised in 1938 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate or abridged form, is accepted by almost all civilized countries.

**Deaths in Canadian Cities and Incorporated Centres.**—The proportion of deaths to the population in the cities of Canada listed in Table 19 remained fairly constant at about 1 p.c. throughout the period 1926-40. Taken on the basis of resident deaths to resident population the single years shown reveal proportions of 1 p.c. of total deaths.

**Crude Death Rates of Different Countries.**—The Netherlands, the Union of South Africa (Whites), Uruguay, Canada, Denmark and Sweden are the only countries with death rates under 10.0 per 1,000 population. The low death rates in the Prairie Provinces, to a great extent, are responsible for the low death rate for Canada. This is due, for the most part, in all three cases, to a favourable age distribution of population.

### Subsection 2.—Infant Mortality

In recent years a great part of the energy designed to effect a decline in the general death rate has been directed at infant mortality and with a large measure of success. That Dominion, provincial and municipal health authorities, together with the private welfare agencies, have all taken part in the struggle to reduce infant mortality is reflected in the figures for the period 1921 to 1942, which show a fairly constant improvement each year. In fact any fluctuations in the general downward trend have been caused by the presence of epidemic diseases. In 1921 the infant death rate for Canada was 102 per 1,000 live births. Figures for 1942 show the lowest rate since the registration area was established, viz., 54 per 1,000 live births. New Brunswick had the highest rate, Quebec the second highest and Nova Scotia the third. In other words over 13,000 young Canadians were added to the population of Canada in 1942, who under conditions prevailing in 1921 would have died before their first birthday.

#### 21.—Infant Mortality and Rates per 1,000 Live Births, by Provinces, 1941-42, with Five-Year Averages, 1921-40

NOTE.—Figures for individual years from 1921-40 will be found in previous editions of the Year Book, beginning with the 1931 edition.

<sup>1</sup> Exclusive of the Territories.

<sup>2</sup> Quebec was not included in the registration area prior to 1926.

**Infant Mortality by Causes of Death.**—Nine principal group causes of death accounted for between 89 and 92 p.c. of the infant mortality in the Dominion, during the years 1931 to 1942. These are shown in Table 22 and it is worthy of note that four diseases present at birth, viz., premature birth, injury at birth, congenital debility and congenital malformations, accounted for over 45 and 46 p.c. of the infant deaths in 1941 and 1942, respectively. In 1926 the percentage was 41 and 42 in 1930, but since the rate of infant deaths has declined over 18 p.c. in the interval between 1936 and 1942, much improvement is indicated in pre-natal, intra-natal and post-natal care.

**Infant Mortality at Age Periods.**—During the years 1941 and 1942, 51·3 p.c. and 52·2 p.c. of all infant deaths occurred before the children had reached one month of age, and 37·4 p.c. and 38·3 p.c., respectively, before they had completed one week of life. The chart facing p. 174 illustrates very dramatically not only the great reductions in infant deaths but also that as the Canadian child ages during its first year of existence its expectation of life becomes much greater.

**Infant Mortality in Canadian Cities and Incorporated Centres.**—It should be remembered that a very low infant mortality rate for cities and towns for any particular year means very little and that wide annual fluctuations are the rule. Moreover, since maternity hospitals in urban centres draw patients from surrounding areas, rates “by place of occurrence” reveal considerable variation from rates “by place of residence”. This is particularly true in the case of Westmount, where the average numbers of infants “by place of occurrence” given in Table 23 are considerably higher than the numbers for single years “by place of residence”. Among the large cities, Vancouver has maintained a splendid record, Montreal has shown a steady improvement and Winnipeg and Toronto have very low rates. Sorel, Three Rivers, Quebec City and Hull all had very high rates prior to 1940, well over 100 per 1,000 live births, but here too are found indications of general improvement for by 1942 the rates “by place of residence” had dropped to 85, 64, 103 and 73, respectively.

**23.—Deaths and Death Rates of Children Under One Year of Age (Exclusive of Still-births) in Urban Centres of 10,000 or Over, by Place of Residence, 1941 and 1942, with Five-Year Averages, 1926-40, by Place of Occurrence.**

**Infant Mortality in Various Countries.**—New Zealand has consistently held the world's low record for infant mortality, where in 1942 the rate was only 29 per 1,000 live births as compared with 68 in 1905, 51 in 1920, and 34 in 1930. Indications of the general improvement during the present century are to be found in England and Wales where the rate has been reduced from 128 per 1,000 live births in 1905 to 80 in 1920, 60 in 1930 and 49 in 1942, while the rate in Germany has declined from 196 in 1904 to 85 in 1930 and 63 in 1942. In the Netherlands the rate has declined from 131 per 1,000 live births in 1905 to 51 in 1930 and 40 in 1942.

**Infant Mortality in Certain Cities of the World.**—One of the greatest triumphs of medicine and public health of modern times has been the reduction of infant mortality in the metropolitan areas of the world.

To give particular examples, the rate of infant mortality for New York was 29 per 1,000 births in 1942, as against a rate of 40 per 1,000 for the Birth Registration Area of the United States. For 1938, Berlin had an infant mortality rate of 58 per 1,000 live births, as compared with 60 for Germany; Paris had a rate of 61 in 1939, compared with a rate of 63 for France and, in 1942, London had a rate of 51 compared with 49 for England and Wales.

In Canada, in 1941 and 1942 Montreal had infant mortality rates of 66 and 54 per 1,000 live births, respectively, as compared with 76 and 70 for the Province of Quebec. Toronto, in 1941 and 1942, had infant mortality rates of 37 and 35 as against 46 and 40 for the Province of Ontario, while Winnipeg and Vancouver had much lower infant mortality rates than their respective provinces. Since 1921 Vancouver and Victoria have recorded two of the lowest rates of infant mortality in the world.

### Subsection 3.—Maternal Mortality

Closely allied with infant mortality are those deaths accidental in character which occur among our Canadian mothers during the period of childbirth. This maternal mortality is shown in Table 25 to be the lowest among mothers under 25 years of age and highest from 30 to 39 years of age. It will be seen in the chart facing p. 174 that there is very little variation between the age groups 25-29 years, 30-34 years and 35-39 years and that roughly 65 p.c. of all maternal deaths are to be found within these three age groups.

**Maternal Deaths by Causes of Death.**—The chart facing p. 174 reveals that while from 1926 to 1942 the two chief causes of maternal deaths were puerperal sepsis and toxæmias of pregnancy, since the introduction of sulpha drugs in 1936 there has been a very marked decline in the death rates from these two causes of death.

## Section 4.—Natural Increase

The rate of natural increase of the population of Canada declined steadily from 17.9 in 1921 to 13.3 in 1926 and to 12.2 in 1929. In 1930 the rate increased to 13.2, but from then to 1937 it declined steadily to 9.6. In 1938 the rate was 11.0, in 1941 it was 12.2 and in 1942 it reached its highest point since 1925, viz., 13.7.

Among the provinces the trends, generally, followed that of Canada with minor variations. The Province of Quebec is considered to have one of the highest rates of natural increase per 1,000 population of any civilized area. The rate for Quebec in 1921 was 23.4 and while it has gradually reduced in line with common experience to a low point of 12.8 in 1937, it has since recovered and stood at 16.5 in 1941 and 18.0 in 1942, the highest point since 1925. Saskatchewan has usually approached Quebec in the matter of natural increase, in fact for the years 1926-30, 1934 and 1935 the rates for this prairie province actually exceeded those of Quebec, although for later years the recovery has been less pronounced, with a rate of 13.4 in 1941 and 14.1 in 1942. Alberta has followed Saskatchewan fairly closely, except that the recovery since 1938 has been more pronounced with a rate of 13.7 in 1941 and of 15.8 in 1942. The high rates of natural increase in the two prairie provinces are largely due to their relatively younger populations and lower crude death rates. The chart facing p. 174 portrays the effects of variations between the birth and death rates in the Dominion and the provinces upon the rates of natural increase.

**Rates of Natural Increase in Various Countries.**— Canada compares quite favourably with most countries in the matter of rates of natural increase. In the Union of South Africa (Whites) in 1941 the rate was 15·6, in New Zealand 13·0, in Australia, 8·9 in Northern Ireland 5·6, in Eire 4·4, in Scotland 3·4 and 1·3 in England and Wales.

**Natural Increase in Canadian Cities and Incorporated Centres.**— Statistics of natural increase in urban centres of 10,000 population or over are given for the period 1926 to 1942 in Table 27. Rates per 1,000 population are not shown, though the census populations in 1931 and 1941 are given to furnish some guide to such rates.

**27.—Natural Increase in Urban Centres of 10,000 Population or Over, by Place of Residence, 1939-42, with Five-Year Averages, by Place of Occurrence, 1926-40**

**Natural Increase, by Sex.**—In Table 28 the relationship of births to deaths is shown by sex from 1926 to 1942 for Canada and for 1941 and 1942 by provinces. In spite of higher male births, the natural increase is shown to be lower for males than for females due to the higher mortality among the former.

Subsection 4. Nationalities of Immigrants.....	180	SECTION 3. EMIGRATION AND RETURNING CANADIANS.....	185
		SECTION 4. COLONIZATION ACTIVITIES....	186

## Section 1.—General Information

In 1851 the population of Upper and Lower Canada, Nova Scotia and New Brunswick totalled 2,312,919 and in 1941 the population of the Dominion was 11,506,655. During that period no fewer than 6,703,891 persons were admitted as immigrants, not all of whom stayed in the Dominion, for numbers eventually found their way to the United States while others returned to the lands of their birth.

The present war has not affected immigration to the same relative extent as did the First World War. The year 1913 witnessed the greatest immigration in Canada's history, 400,870 persons having been admitted; the greatest number admitted during the war years was 72,910 in 1917. At the outbreak of war in 1939, Canada had been going through a period of restricted immigration and the figures for 1940, 1941, 1942 and 1943 showed decreases of only 34 p.c., 46 p.c., 56 p.c. and 51 p.c., respectively, as compared with the last complete pre-war year 1938, while the decrease between 1913 and 1917 amounted to almost 82 p.c.

**Assimilation of Immigrants.**—The latest information showing the percentages of each origin born in Canada and in other countries and also the leading races with which the males have intermarried, as found at the Census of 1931, were presented at pp. 159-160 of the 1939 Year Book and at pp. 144-146 of the 1940 edition. Data for the 1941 Census are not yet available.

**Expenditures on Immigration.**—About 65 p.c. of Canada's expenditure on the encouragement and control of immigration was spent in the three decades 1901-1930. Expenditures for the five latest years will be found in the Public Finance chapter of this volume, while yearly details may be obtained from the "Public Accounts", published annually by the Department of Finance.

**Other Related Work of the Branch.**—While immigration proper has declined materially since 1930, the work of the Immigration Branch of the Department of Mines and Resources continues to be heavy, inasmuch as the officials of the Branch are required to examine tourists and other non-immigrants, including the many persons who cross the International Border in the course of their business and Canadians returning to this country.

\* Revised under the direction of A. L. Jolliffe, Director of Immigration, Department of Mines and Resources, Ottawa.

## Section 2.—Statistics of Immigration

Immigration is naturally at a low ebb in time of war; therefore the outline of immigration policy and entry requirements formerly appearing in this Section has been omitted from this edition. Full information regarding the Immigration Regulations may be obtained from the Immigration Branch, Department of Mines and Resources, Ottawa. (See also p. 110 of the 1941 Year Book.)

### Subsection 1.—Growth of Immigration since Confederation

The wide fluctuations in the immigration movement since 1890 are shown in Table 1. The heavy movement between 1902 and 1914 was cut down severely between 1915 and 1918. Beginning with 1932 the figures have been the lowest since 1897.

#### 1.—Immigrant Arrivals in Canada, 1890-1943

NOTE.—Statistics for 1852-89 will be found at p. 153 of the 1942 Year Book.

## Subsection 2.—Sex and Conjugal Condition of Immigrants

Females constituted 61.3 p.c. of the total immigrants to Canada in 1943, as compared with 57.7 p.c. in 1942. Prior to 1932 males normally exceeded females.

## 3.—Sex and Conjugal Condition of Immigrant Arrivals, by Age Groups, 1941-43

1943 .....	2,113	4,064	1,177	1,150	8,504

### Subsection 3.—Languages and Racial Origins of Immigrants

**Languages of Immigrants.**—At the Census of 1941, only 1.2 p.c. of the population of ten years of age or over was unable to speak either English or French, but the percentages, by racial origins, of those speaking neither official language varied greatly. A short discussion of this subject will be found at p. 135.

The Immigration Branch does not record the ability of immigrants to speak the official tongues of the Dominion; the statistics appearing in Table 5 relate only to the mother tongue of the immigrant. The great majority of those coming from the United States naturally give English as their mother tongue, regardless of their racial origin. In the calendar year 1943, 276 persons coming from the United States, many of whom were undoubtedly of French-Canadian origin, gave French as their mother tongue. In that year, persons from all countries giving English as their mother tongue constituted 93.1 p.c. of the total and those giving French 4.2 p.c.

### 5.—Mother Tongues of Immigrants, 10 Years of Age or Over, 1934-43

NOTE.—Dashes in this table indicate that no immigrants were reported for the corresponding stub item.

**Racial Origins of Immigrants.**—The great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those Continental European countries where the population is ethnically closely related to the British, though for some years there was an increasing immigration of Slavs. Since the outbreak of war, the predominant racial origins of immigrants have been British, French and Jewish.

## 6.—Racial Origins of Immigrants into Canada, 1939-42

NOTE.—Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Statistics for 1926 will be found at pp. 158-159 of the 1939 Year Book and for 1927-36 at p. 152 of the 1940 Year Book and for 1937-38 at p. 156 of the 1942 Year Book.

<sup>1</sup> Reported as "Swiss" origin but are evidently one of the constituent races such as German, French, Italian, etc.

## Subsection 4.—Nationalities of Immigrants

In the calendar year 1943, the percentage of total immigrants into Canada who were British subjects was 49.1, exactly the same as that of United States citizens. In 1930, when total immigration was fourteen times that of the latest year, the proportions were 34 p.c. and 21 p.c., respectively.

## 7.—Nationalities of Immigrants into Canada, 1939-43

NOTE.—Dashes in this table indicate that no immigrants were reported for the corresponding stub items. Statistics for 1930 will be found at p. 190 of the 1936 Year Book, for 1931-36 at p. 154 of the 1940 Year Book and for 1937-38 at p. 158 of the 1942 Year Book.

### Subsection 5.—Ports of Arrival, Destinations and Occupations of Immigrants

**Ports of Arrival of Immigrants.**—Throughout the greater part of Canada's history, Quebec has been the port at which the greatest number of immigrants have landed. Of recent years there has been a tendency for a larger percentage of immigrants to arrive at the port of Halifax. This appears to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Arrivals for the calendar years 1931-37 are given at p. 164 of the 1939 Year Book. Statistics on a fiscal-year basis will be found in the Report of the Department of Mines and Resources.

**Destinations of Immigrants.**—Immigrants entering the Dominion are required to give the province of intended destination, but it does not necessarily follow that this is the province of eventual residence. It is believed, however, that the figures for later years give a truer picture of actual residence than did those for the earlier years, when 'boom' conditions tended to create a class of 'floaters' who flocked to new jobs, quite possibly in other provinces, as soon as the ones on which they were originally employed ended. Of the provinces, Ontario has received the largest number of immigrants in each year since 1905. In 1929 and 1930, Manitoba was in second place, while in the latest years Quebec has stood second as the immediate destination of new arrivals.

### 8.—Destinations of Immigrants into Canada, by Provinces, 1929-43

NOTE.—The 1934-35 edition of the Year Book gives similar information for the fiscal years 1901 to 1934.

Year	Maritime Provinces	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia and Yukon	N.W.T.	Not Given	Total
1929	4,961	23,952	61,684	38,340	11,336	15,300	9,417	2	1	164,993

1942	1,299	1,399	3,315	209	118	287	949	Nil	"	7,576
1943	1,852	1,369	3,852	190	171	310	760	"	"	8,504

**Occupations of Immigrant Arrivals.**—Immigrants are classified as follows: farming, labouring, mechanics, trading and clerical, mining, female domestics, and other. Of late years, the last-named class has accounted for about 60 p.c. of the total, owing to the curtailment of immigration and to the numbers of wives and children of earlier immigrants coming to Canada. Under these circumstances the statistics of occupations are meaningless and will be discontinued until circumstances warrant the re-appearance of the data.

### Subsection 6.—Rejections of Immigrants

**Prohibited Immigrants.**—The immigration of certain classes of persons to Canada is prohibited. These classes include persons who are physically or mentally unable to earn a living, criminals, beggars, persons who believe in the overthrow

of government by revolutionary influence, etc. The particular subsection of the Act defining this class is worded as follows:—

- (n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property.

Section 3 of the Immigration Act (R.S.C. 1927, c. 93), dealing with prohibited immigrants, was quoted *in extenso* in the editions of the Year Book published between 1934 and 1940.

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

### 9.—Rejections of Prospective Immigrants upon Arrival at Ocean Ports, by Principal Causes and by Nationalities, 1932-42

NOTE.—Statistics for the fiscal years 1903-34 will be found at p. 222 of the 1934-35 Year Book.

Item	1932	1933	1934	1935	1936	1937	1938	1939	1940	1941	1942	Total 1932-42
<b>CAUSE</b>

Other.....	104	64	56	66	86	128	78	53	137	58	42	872

While the majority of persons included in the figures of Table 10 have been previously shown in the statistics of immigration, a certain number of deserting seamen are included who have, of course, never been included in the immigration statistics. This situation has become intensified during the war years.

### 10.—Deportations of Immigrants, Including Accompanying Persons, after Admission, by Principal Causes and by Nationalities, 1932-42

NOTE.—Statistics for the fiscal years 1903-39 will be found at p. 160 of the 1940 Year Book.

### Subsection 7.—Juvenile Immigration

Juvenile immigration, apart from children accompanying their parents, has not been a large factor since 1931, when the Dominion Government ceased to grant financial assistance for this particular form of immigration. An outline of juvenile immigration, including those children brought to Canada under the British Empire Settlement Agreement, is given at p. 121 of the 1941 Year Book.

Evacuated or 'guest' children, temporarily resident in Canada as a result of war conditions in the United Kingdom, are not included in the figures of Table 11.

### 11.—British Juvenile Immigrants, Fiscal Years 1920-43

NOTE.—Juvenile immigrants are, of course, included in the total number of immigrants recorded elsewhere. Figures for 1901 to 1914 appear at p. 164 of the 1942 Year Book.

Year	Juvenile Immigrants	Year	Juvenile Immigrants	Year	Juvenile Immigrants
1920.....	155	1928.....	2,070	1936.....	4
1921.....	1,426	1929.....	3,036	1937.....	10

1927.....	1,741	1935.....	6	1943.....	"

**British 'Guest' Children.**—An account of British guest children coming to Canada for the duration of the War is given at pp. 164-165 of the 1942 Year Book.

### Subsection 8.—Refugee Immigration

An account of this movement, in so far as it can be distinguished from normal immigration, is given at pp. 165-166 of the 1942 Year Book.

### Subsection 9.—Oriental Immigration

Under present conditions, Oriental immigration has ceased to be a problem and the economic effect of the presence of persons of 'Oriental origin can best be studied from census figures. An outline of the background and legislation connected with the immigration of Orientals into Canada is given at pp. 122-124 of the 1941 edition of the Year Book, and the table below presents statistics of Oriental immigration by sex since 1906, the earliest year for which these figures are available.

### 12.—Oriental Immigration to Canada, 1906-42

### Section 3.—Emigration and Returning Canadians

Emigration from Canada is an important factor tending to offset the immigration activities of the past and the movement from Canada to the United States has attained considerable proportions at certain periods. The two main factors have been the immigration to the United States of Europeans originally immigrating to Canada and the emigration of native-born Canadians.

In 1924 immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. Statistics of that movement, from Apr. 1, 1924, to Dec. 31, 1943, are given in Table 13.

13.—Canadians<sup>1</sup> Returned from the United States, 1924-43

Year	Canadian-Born Citizens	British Born Who Had Acquired Canadian Domicile	Naturalized Canadian Citizens	Total	Year	Canadian-Born Citizens	British Born Who Had Acquired Canadian Domicile	Naturalized Canadian Citizens	Total

<sup>1</sup> Not including aliens with Canadian domicile.

<sup>2</sup> Nine months.

A question of considerable interest to Canadians is that of the permanent movement of population between Canada and the United States. In view of the lack of Canadian statistics on emigration, the following table has been compiled from figures supplied by the Immigration and Naturalization Service of the United States Department of Justice. Not all of the statistics are available by months, so that it has not been possible to present the figures on a calendar-year basis; they are, therefore, shown on that of the United States fiscal year, July 1 - June 30. The column headed "Deportable Aliens Destined to Canada" covers persons permitted to return to Canada in lieu of deportation proceedings.

14.—Presumed Permanent Movement of Population Between Canada and the United States, Years Ended June 30, 1933-43

<sup>1</sup> Revised since the publication of the 1942 Year Book.

Statistics of the permanent migration between Canada and the United Kingdom published by the British Board of Trade, are available from Jan. 1, 1924, to June 30, 1939. These were given at p. 169 of the 1942 Year Book.

Commencing on Apr. 1, 1938, an enumeration was made of returning Canadians and other non-immigrants entering the Dominion from Newfoundland. The table below gives details of this movement for the calendar years 1941-43.

**15.—Returning Canadians and Other Non-Immigrants Entering the Dominion from Newfoundland, 1941-43**

Item	1941	1942	1943
Canadians returning after an absence of more than one year...	326	325	432
Canadian born.....	78	155	331
Other British born.....	226	124	91
Naturalized with Canadian domicile.....	4	7	2
Aliens with Canadian domicile.....	18	39	8
Tourists, etc.....	10,902	14,086	13,389
Canadians returning after an absence of less than one year....	10,216	15,435	10,755
<b>Totals.....</b>	<b>21,444</b>	<b>30,171</b>	<b>24,576</b>

The classification of returning Canadians and other non-immigrants, by classes of travel, formerly shown in this Section, has been dropped owing to the incompleteness and unreliability of information under war-time conditions.

**Section 4.—Colonization Activities**

Information on this subject is given at pp. 201-202 of the 1936 edition of the Year Book.

# CHAPTER VII.—SURVEY OF PRODUCTION\*

## CONSPECTUS

	PAGE		PAGE
SECTION 1. LEADING BRANCHES OF PRODUCTION, 1940 and 1941.....	187	SECTION 3. LEADING BRANCHES OF PRODUCTION IN EACH PROVINCE, 1941 Compared with 1940.....	189
SECTION 2. PROVINCIAL DISTRIBUTION OF PRODUCTION, 1940 and 1941.....	189		

NOTE.—Since the publication of the 1942 edition of the Year Book, a change has been made in the gross and net production of the primary industry, agriculture, for 1939. This has reduced the gross figures as shown for that year in the 1942 Year Book by \$19,676,000 and the net production by the same amount. These changes should be carried down into the totals for primary production and the grand totals of Table 1, p. 174, and should be noted in relation to their effect on the detailed tables that follow for that year. An adjustment has also been made for 1939 in the duplication contained in the figures for the secondary industry, manufactures. The net effect of these changes raises the gross and net grand totals by \$116,136,795 and \$17,174,726, respectively. Since there was no 1943 Year Book and the statistics now presented cover a two-year period, pressure on space precludes reprinting the 1939 figures. The reader requiring more detail regarding the changes is referred to the annual report "Survey of Production in Canada, 1940" where the revised figures for 1939 are given. The revised statistics for 1939 with industrial and provincial distribution were presented in Appendix II, p. 1,003, of the 1942 Year Book.

Mainly due to the requirements of war, Canada's production on the whole reached higher levels in 1941 than ever before. The net output of the nine main branches of production was greater by 18 p.c. in 1940 and by 45.6 p.c. in 1941 than in 1939. The expansion of the manufacturing industries was the most important factor in the two-year period, since the general trend of production was, of course, directed to munitions of war. Agriculture, the leader among primary industries, showed the lowest percentage increase in 1941 compared with 1940, while fishing and trapping each recorded a 35 p.c. advance in net value. The large gain in trapping was mainly accounted for by advances in prices of most kinds of furs, notwithstanding a decline of about one-quarter in the numbers of pelts sold.

The figure of net production compiled by the Dominion Bureau of Statistics represents an estimate of the amount contributed to the national economy by the leading industrial groups occupied with commodity production. "Net" production represents the total value less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process. For purposes of ordinary economic discussion, the net figure should be used in preference to the gross, in view of the large amount of duplication that the latter includes.

An explanation of the general method used in computing the statistics shown in this chapter is given in corresponding sections of previous Year Books and also in the appendix to the "Survey of Production", a bulletin issued annually by the Dominion Bureau of Statistics.

### Section 1.—Leading Branches of Production, 1940 and 1941

**Primary Production.**—The primary group of industries recorded a gain of 10.8 p.c. in the net value of output for 1941 over 1940.

While agriculture showed the lowest percentage increase among primary industries, it added the greatest absolute value to net production. The chief branches of agriculture accounting for the increase were live stock and dairying. The mining

\* Revised by Sydney B. Smith, M.A., Chief, Business Statistics Branch, Dominion Bureau of Statistics. This Branch, in addition to the Survey of Production in Canada, publishes: National Income of Canada 1919-1938, Part I, Economic Status; Monthly Review of Business Statistics; Economic Conditions; Bank Debits and Equation of Exchange; and Commercial Failures.

industry continued its growth at a somewhat lesser rate than in 1940. This progress was made mainly on the basis of increased production, since prices of gold and base metals were stabilized for the war period.

**Secondary Production.**—Net production in the secondary industries showed a gain of 33.2 p.c. in 1941 over 1940. Manufactures, which accounted for 87.4 p.c. of all secondary production, showed an increase of 34 p.c. Expansion of production planned immediately after the outbreak of war began to show results in 1940 and by 1941 had reached substantial proportions.

### 1.—Gross and Net Values of Production in Canada, by Industries, 1940 and 1941

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process.

Industry	1940		1941		Percentage Change in Net Value, 1941 from 1940	Percentage of Net Value to Total Net Production 1941

<sup>1</sup> Comprises fuel, electricity, etc., and net sales shown in Table 7 of Chapter XII. <sup>2</sup> Includes sawmills, pulp and paper mills, fish-processing, and certain mineral industries, which are also included in other headings above. This duplication, amounting in 1940 to a gross of \$801,136,719 and a net of \$350,845,638 and in 1941 to a gross of \$957,448,976 and a net of \$410,298,515, is eliminated from the grand total.

<sup>3</sup> Includes duplication mentioned in footnote 2. The percentage of the net manufactures, *n.e.s.*, to the total net production in 1940 was 41.63 and in 1941 was 46.50.

Following Table 1 in previous editions of the Year Book, a statement has appeared showing the net values of production by individual sub-groups for the primary and secondary industries. These data were repeated from the respective chapters and the only new information added was the costs of supplies including fuel and electricity which were subtracted in certain cases from the gross figures to give the net values. Such information as is necessary to the interpretation of the production figures is now given in the text above and as footnotes to the tables, and this year the detail has been omitted in order to conserve space. The reader will find these detailed statistics in the respective chapters dealing with primary and secondary production or in the Annual Report of the Survey of Production.

## Section 2.—Provincial Distribution of Production, 1940 and 1941

Generally speaking, there was no striking change in the relative importance of the provinces in respect to the net value of production during the year 1941. Ontario, Quebec and British Columbia, however, contributed a greater proportion of the total than in the preceding year and eight of the nine provinces recorded increased production.

### 2.—Gross and Net Values of Production in Canada, by Provinces, 1940 and 1941

<sup>1</sup> Based on 1941 population figures as given at p. 79.

**Per Capita Production.**—The Dominion total of net commodity production at \$410 per capita was \$78 above the figure for 1940, the estimated increase in the population having been less than one per cent.

Eight of the nine provinces showed per capita betterment in 1941 over the preceding year. Ontario, with its pre-eminent industrial position and diversification, was in first place in this respect, with a net commodity output of \$551 per capita, a gain of approximately \$118 over the level of 1940. British Columbia ranked second and Quebec third.

## Section 3.—Leading Branches of Production in Each Province, 1941 Compared with 1940

**Maritime Provinces.**—Net production in the Maritime Provinces in 1941 increased 7.6 p.c. over the preceding year. Decreases were shown in agriculture and mining. The greatest gain was recorded in manufactures, the net production rising from \$86,100,000 to nearly \$100,000,000.

**Quebec.**—Manufacturing was again the principal industry in Quebec, contributing, without duplication, about 51 p.c. of the net value of provincial production. In comparison, agriculture accounted for only 11.8 p.c. and forestry 12.5 p.c. of the

total net value. Mining registered a slight gain, showing an advance from 9.7 to 10.0 p.c., while construction maintained its position at 6.0 p.c. of the provincial total.

**Ontario.**—This Province held the leading position in the net value of manufacturing production in 1941, which, without duplication, contributed 59 p.c. of the provincial total. Agriculture and mining were relatively less important than in 1940.

**Prairie Provinces.**—Agriculture naturally predominated in the Prairie Provinces, contributing about 58 p.c. of the net production in 1941. The increase over 1940 was 9.2 p.c., gains having been general in each of the three provinces. Manufacturing accounted for more than one-sixth of the regional output—a remarkable development of the past quarter century in an area generally regarded as predominantly agricultural. Mining continued to advance, supplying over 8 p.c. of the net total.

**British Columbia.**—The net output from forestry in British Columbia during 1941, was nearly \$99,000,000 or slightly more than one-quarter of the provincial production. Manufactures, *n.e.s.*, eliminating duplication, contributed the highest proportion, viz., 26.9 p.c., while mining comprised nearly 16 p.c. of the net value.

3.—Gross and Net Values of Production, Classified for Each Province, by Industries,  
1940 and 1941

Agriculture, including stock raising and horticulture, is the most important single industry of the Canadian people, employing, according to the Census of 1941, 25·2\* p.c. of the total gainfully occupied population and 30·5\* p.c. of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see pp. 10-11 of this volume.

An introductory outline of the historical background of Canadian agriculture is given at pp. 187-190 of the 1939 Year Book. As now presented this chapter treats of current governmental activities—Dominion, in as much detail as space will permit (to utilize such space to the best advantage, the system of special authoritative articles prepared in the Department of Agriculture but not repeated from year to year unless changes warrant, has been adopted); and Provincial, by outlines and references to provincial sources of information. Comprehensive statistics of agriculture, collected and compiled by the Agricultural Branch of the Dominion Bureau of Statistics and covering Canada as a whole, close the chapter. These include data on values of agricultural production and farm capital, field crops, farm live stock and poultry, dairying, fruit, special crops, prices and miscellaneous statistics. The review of world statistics, compiled from the publications of the International Institute of Agriculture, has not been included in the three latest editions of the Year Book; these statistics are not now available because of war conditions.

## THE WAR AND CANADIAN AGRICULTURE†

After four years of war, Canadian agriculture is definitely on an all-out production basis. Notwithstanding the record production of 1942 in practically all lines of agriculture, the program for 1943 called for even greater output in order to meet the needs for home consumption, for export to Britain and others of the United Nations, and to provide something additional for the relief of countries freed from enemy occupation. Important adjustments have been made necessary in the pro-

\* Excluding persons on Active Service who are normally employed in Agriculture.

† Prepared under the direction of G. S. H. Barton, C.M.G., B.S.A., D. Sc.A., Deputy Minister, Department of Agriculture, Ottawa.

duction plans of Canadian farmers. Reductions in acreage sown to wheat have been accompanied by substantial increases in coarse grains, oil seeds, fodder and pasture. Payment of subsidies and other forms of government assistance have aided and stimulated production of foodstuffs. Improvements in processing techniques have opened new outlets for farm produce. The introduction of rationing of butter and meat has facilitated an equitable distribution and protected the interests of the Canadian consumer.

Three new organizations which will have much to do with shaping future developments in agriculture were brought into being early in 1943. An Agricultural Food Board will be responsible for directing policies affecting war-time food supplies. An Agricultural Advisory Committee, comprising representatives of the provinces and of organized farmers, will assist in maintaining close relationship between the Dominion Department and those immediately identified with production throughout the country. The third body, the Joint Agricultural Committee of Canada and the United States, will keep an eye on food production and distribution in the two countries in order to further programs that are of concern to both.

The Bacon Board, which has functioned since the early months of the War, was reconstituted during 1943 as a Meat Board and its operations extended to cover other meats as well as pork and its products.

**Farm Labour.**—During the first two and a half years of the War there was a steady migration of farmers' sons and hired men from farms to join the Armed Forces or to take more remunerative jobs in industrial plants. In March of 1942 provision was made for the indefinite postponement of compulsory military services for all farmers, farmers' sons and farm labourers actually engaged in essential farm work on Mar. 23, 1942. Moreover, it was further provided that those so engaged at that date, who sought to leave the farm for other employment, except to enlist in the Armed Forces, might be re-employed only as determined by the Selective Service Director. The only exception was in the case of seasonal employment in such industries as fishing and lumbering. All other agricultural workers were "frozen" to the land for the duration.

While this program has helped, it is estimated that on Mar. 1, 1943, there were approximately 345,000 fewer male workers on farms than at the corresponding date of 1939, a decrease of 25 p.c. The rate of departure from farms, however, dropped sharply during 1942 and the number of male farm workers on Mar. 1, 1943, was only 65,000 below the figure for Mar. 1, 1942.

Manpower shortages were accentuated by the backward weather conditions which prevailed over much of the country in the spring of 1943 and resulted in overlapping of important farm work. Employment of high-school students and of farm commando groups or similar groups organized in cities and towns has contributed in some measure toward relieving the shortage of farm help.

Relaxation in the restrictions placed on the manufacture of needed farm machinery has helped to offset the labour shortage. Rationing of machinery with a view to equitable distribution has helped to put the available supplies to use where the need was greatest.

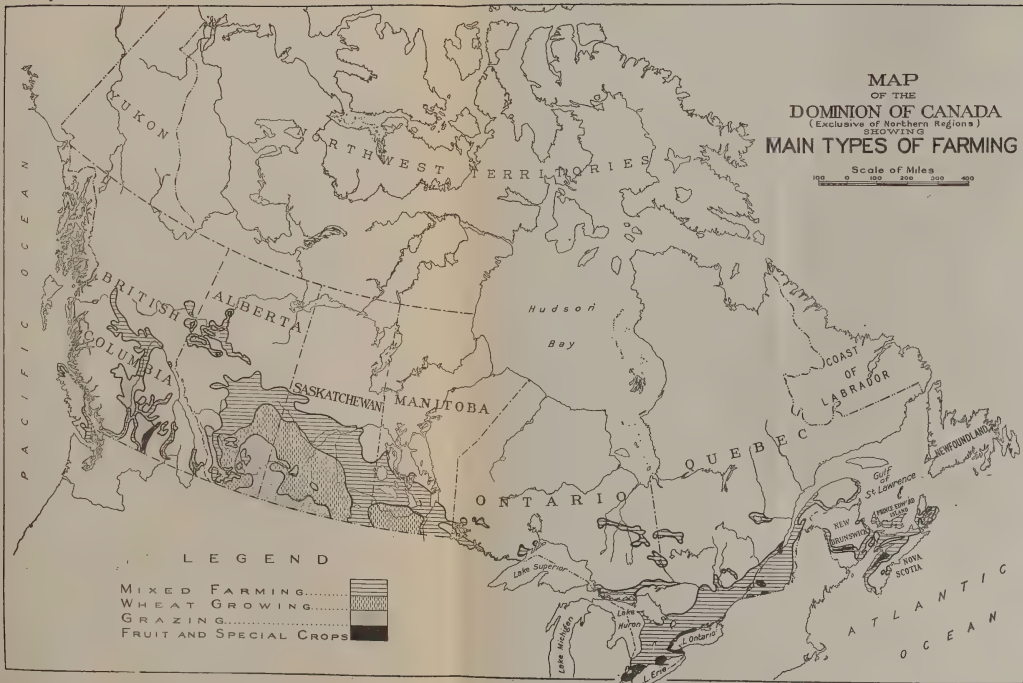

**Prices of Farm Products.**—Farm prices in general have materially increased since the War began, especially in the case of meat animals and live-stock products.

The price increase that occurred during the spring and summer of 1941 gave rise to the fear that price inflation was imminent. Believing such a development to be undesirable, the Government took steps to strengthen and extend the measures

Scale of Miles

0 100 200 300 400

already in effect to stabilize prices and urban wages. Price ceilings were announced, effective Dec. 1, 1941, on all commodities except fresh fruits and vegetables. The main effect of this order was the setting of maximum retail prices for most farm products, but because of the nature and scope of the trade in these products, provision was made to exempt sales made by farmers to dealers, processors or manufacturers. In the succeeding 18 months, many of the individual ceilings had to be modified; this was especially true in the case of live-stock products. Ceiling regulations have also been applied to such vegetables as onions and potatoes and to certain fruit crops. The establishment of a program of price control has led to the use of subsidies, producer subsidies being employed to stimulate production along certain important lines.

**Grains.**—The 1943 objectives set for Canadian grains called for a reduction of the area sown to wheat and an increase in that to coarse grains. The wheat area was reduced to 17,500,000 acres, or something over 4,000,000 less than in 1942. The difference was taken up with coarse grain and forage crops.

The record yields of 1942 materially increased the supply of grains in storage. These large supplies over-taxed storage capacity, and in some areas grain was piled on the ground. It soon became apparent, however, that this unprecedented supply would be paralleled by demand development, both in Canada and in other countries of the United Nations. Record amounts of wheat, for example, were used as live-stock feed in Canada during 1943.

A similar expansion of demand for grain occurred in the United States as a result of increased live-stock numbers and heavier feeding, and Canadian grains were in heavy demand. From August, 1942, to July, 1943, nearly 100 million bushels of coarse grains moved across the line, and negotiations for a considerable amount of wheat had been undertaken.

At the same time, Allied victories in the Mediterranean and North Africa have liberated considerable numbers of people whom the United Nations will feed. This relief feeding has added materially to the large commitments already made with the United Kingdom for flour and other wheat products.

Considerable difficulty arose during the early months of 1943 in the distribution of Canadian grain. Eastern Canada depends heavily on western grain for live-stock feeding, and efficient distribution is as important as large supplies. The tremendous task faced by the Canadian transportation system in moving war material and personnel was complicated during the late winter months by serious storms. Later, a shortage of labour at the Head of the Lakes impeded the normal flow of grain to the east.

In the hope of forestalling similar difficulties in 1944, the Government undertook to pay storage and interest charges on grain brought east during the summer months and stored at designated elevators for winter use. Additional provision was made to bonus the farmer who bought early and utilized his own storage during summer and fall months.

The Freight Assistance Policy was continued in effect on a basis similar to that of 1942. From August, 1942, to July, 1943, the freight was paid on 18,900,000 bushels of wheat, 21,900,000 bushels of oats, 16,800,000 bushels of barley, 600,000 bushels of rye, and 712,000 tons of mill feeds and screenings.

**Bacon Hogs.**—Fulfilment of Canada's fourth bacon agreement with the United Kingdom will require the production of 675,000,000 pounds of bacon, or approximately 5,625,000 hogs. This represents an increase of 75,000,000 pounds over the

1941-42 contract and almost as much bacon as was exported during the four years of the First World War. The contract price for this bacon is \$21.75 per 100 pounds Grade A "Wiltshire" at seaboard, a considerable increase over the former contract prices. In addition, the eastern provinces are continuing the subsidy payments.

Domestic consumption in Canada was maintained at a high level during 1942. The total disappearance of pork products in Canada exceeded that of 1941. Hog marketings for the year 1942 showed a slight decrease from 1941, but the total dressed weight was higher as a result of higher average carcass weights.

In order that meat supplies could be most effectively distributed, and that more hogs could be channelled into export trade to meet the requirements of the 1942-43 contract, live-stock slaughter was brought under control. An order was issued on Jan. 1, 1943, putting all slaughterers of hogs as well as other live stock under a licence system.

**Beef Cattle.**—Numbers of beef cattle on farms during 1942 continued their upward trend. Cattle slaughterings were slightly lower in 1942 than in 1941. Total dressed weight, however, was higher due to the higher average carcass weight.

Prices continued to rise throughout 1942, and were considerably above pre-war levels. A beef program has been established which is designed both to ensure for producers a stable market and to protect consumers against further increases in retail prices. Wholesale price ceilings for various cuts of beef have been set. Prices are free to vary below the ceiling according to market conditions but producers are protected against undue fluctuations because any surplus beef is purchased by the Meat Board for domestic stock piling or export, and floor prices have been set on dressed beef.

With the introduction of meat rationing, it has been necessary to maintain more control of the live-stock slaughter industry. Beef cattle may be slaughtered only under permit issued by the Wartime Prices and Trade Board.

The growing needs of the domestic market and the Armed Services assures Canadian beef-cattle raisers of an adequate market for all of their live stock.

**Dairy Products.**—The increased purchasing power of the Canadian consumer since 1940 has been directly reflected in increased purchase of milk, butter, cheese and other dairy products. Exports of cheese and evaporated milk products were also increased and, in order to maintain supply, it was necessary to stimulate production by the payment of subsidies direct to producers. This course was necessary because retail prices were under control of the Wartime Prices and Trade Board, and ceiling prices had been established for dairy products, along with most other goods, in the latter part of 1940, in order to arrest the rising cost of living. The supply problem was further accentuated in December of 1942 when the retail price of milk in Canada was reduced 2 cents a quart to assist in lowering the cost of living. About the same time butter rationing was introduced in Canada. To meet estimated requirements for all needs, a total of 18,500,000,000 pounds of milk will be required during 1943. The estimated actual production for 1943 as given at p. 232 is 17,500,000,000 pounds, which represents only a fractional increase over the total production for 1942 and an increase of 10.3 p.c. over the average production from 1936-40.

Domestic requirements of butter in Canada increased to 391,000,000 pounds in 1942, an increase of 8.4 p.c. over the five-year average 1936-40 of 360,000,000 pounds. Since the outbreak of war, both maximum and minimum prices have been set for butter and, while these prices have been adjusted from time to time, butter prices have remained relatively stable.

In order to stimulate increased production of butter and avert a threatened shortage during the winter of 1942-43, a subsidy of 6 cents per pound butterfat was paid the producers after July, 1942. In December, 1942, this subsidy was increased to 10 cents per pound butterfat for the period ended Apr. 30, 1943. In spite of subsidy, however, it became necessary to introduce butter rationing in Canada in December, 1942. A subsidy of 8 cents per pound butterfat was paid to producers during the period May to December, 1943, and this has been increased to 10 cents from January to April, 1944.

Cheese production in Canada totalled 207,000,000 pounds in 1942, an increase of 33.1 p.c. over 1941 and 56.1 p.c. over the five-year average 1936-40. Exports in 1942 represented approximately 70 p.c. of the total production. Although the Canadian domestic supply of cheese was regulated and restricted by the Dairy Products Board, it has not been necessary to ration cheese. The domestic consumption of cheese dropped to 41,300,000 pounds in 1942, a decrease of 20 p.c. over the previous year.

The export price of cheese, together with Government quality bonuses, provincial subsidies, and export subsidies, have been the chief factors regulating the cheese supply. In 1942 a favourable cheese price relationship resulted in high production, but in the first five months of 1943, due to a higher price for butterfat for butter, this relationship between butter and cheese was reversed and cheese production declined about 50 p.c. The fourth cheese contract between the United Kingdom and Canada was for 150,000,000 pounds of cheese to be shipped from Apr. 1, 1943, to Mar. 31, 1944. This is an increase of 25,000,000 pounds over the previous contract. The contract price is 20 cents f.o.b. factory shipping point, representing an increase of  $5/8$  cent to 1 cent per pound over the 1942-43 contract. This is supplemented by a Dominion bonus payment and provincial subsidies in Ontario and Quebec. Furthermore, to meet British needs, Ontario and Quebec cheddar cheese was removed from the domestic market during the summer of 1943.

The production of evaporated milk in Canada has been increasing over the past few years, and 1942 production was approximately twice as great as the average for the period 1936-40. There has also been an increased demand for whole-milk and skim-milk powder by the Red Cross and the Department of Munitions and Supply. The loss of certain important markets in the Far East has resulted in a decrease in the total demand for condensed milk. From December, 1941, to May, 1942, it was found necessary, in order to increase production of concentrated milk products, to pay a subsidy of 40 cents per 100 pounds for all milk going into the manufacture of concentrated milk products. In the spring of 1943, a subsidy of 25 cents per 100 pounds was again granted for a short period.

The Canadian Government's commitment to the United Kingdom for evaporated milk for the period from Apr. 1, 1942, to Mar. 31, 1943, was 668,000 cases—10,000 above the previous contract. The price per case at Montreal was \$4.45 as compared with \$4.00 in 1941-42.

**Eggs and Poultry.**—During 1942 and 1943, the production of eggs and poultry rose to new levels. In turn domestic and export demands have gone up rapidly.

From the beginning of the War to May 1, 1940, eggs were exported to Great Britain by private firms to private British importers. In May, 1940, the British Ministry of Food became the sole importer. On Apr. 15, 1941, control of exports by Canada was assumed by the Special Products Board. Exports from Canada amounted to 1,274,000 dozen eggs in 1939. By 1943 a new contract with the

United Kingdom called for the largest total export of eggs in the history of Canada. The British Ministry of Food agreed to purchase up to 9,000 long tons of dried egg products, the equivalent of 63,000,000 dozen eggs. Since the beginning of 1942 Britain has been importing only dried eggs in place of fresh and storage eggs in the shell. This more concentrated form is preferred because of greater ease of storage, shipment and general handling. The contract called for half of the total quantity of egg powder to be shipped in 5-ounce packages, each package containing the equivalent of one dozen eggs. This package is for direct distribution to consumers and fits in with the British rationing program. The remainder is shipped in 14-pound packages for distribution to the restaurant trade. Under this agreement, shell eggs are purchased by the Special Products Board at prices f.o.b. Montreal, ranging from 33 cents to 37 cents per dozen for Grade A large, depending upon the season of the year.

British authorities announced early in the War that poultry was to be considered a luxury and its importation prohibited, and since May 1, 1940, no poultry has been forwarded to Britain. Nevertheless, the industry has done well because of strong domestic and United States demand.

**Fruits and Vegetables.**—Because of the importance of the apple industry and the necessity of maintaining its productive capacity until such time as overseas markets can again accept shipments, the Dominion Government has provided guarantees, involving substantial expenditures, to ensure reasonable returns to growers and handlers of the crop. The conditions that called for government aid in the disposal of surplus apples of 1939-42 seasons were repeated in connection with the 1943 crop, and guarantees were again provided in agreements with Nova Scotia and British Columbia growers. The Government paid out about \$2,400,000 for assistance in marketing the 1942 Nova Scotia crop. On the other hand, less than \$250,000 was required in British Columbia, and with a short crop there in 1943 and a good domestic demand government assistance will likely be small again. Fresh fruit shipments to Britain were not made in 1942-43, but 3,340 tons of evaporated apples from 550,000 barrels were shipped from the 1942 Nova Scotia crop.

Potato production in 1942, estimated at 71,470,000 bushels, was approximately equal to the average annual output for the ten-year period 1930-39. Prices were higher than for some years, and during the late winter and spring local shortages developed at many points in central Canada. Acreage planted in 1943 was 5 p.c. greater than in 1942.

Among the important developments has been the sharp increase in the dehydration of vegetables. The Agricultural Supplies Board lent equipment to a number of plants in surplus-producing areas, and production was commenced during 1942 and 1943. Production from the 1942 crop until April, 1943, included 715 tons of potatoes, 50 tons of cabbage, 73 tons of carrots, and 45 tons of onions (dried weight). The basis of this program was the obtaining of a product that could be shipped overseas with the use of a minimum of cargo space. The Special Products Board, which undertook delivery to the British Ministry of Food, shipped, from the 1942 crop, 750 tons of dehydrated potatoes and considerable quantities of vegetables. Contracts for delivery from the 1943 crop included 3,920 tons of potatoes and 1,710 tons of vegetables.

In 1942, subsidies to growers of tomatoes, corn, peas and beans for canning were arranged, and to maintain and further encourage production these were

increased in 1943. Growers of berries for jam were subsidized in order to encourage some delivery to factories rather than all to the fresh-fruit trade, and also to encourage new plantations.

**Fertilizer Subventions.**—In order to encourage the use of fertilizer on feed crops, subventions were paid to farmers in the five eastern provinces and in British Columbia, with a view to increasing the yields of pastures, clover, alfalfa, grass meadows, grains, mangels and turnips for feeding live stock.

## Section 1.—Government in Relation to Agriculture

It is provided in Sect. 95 of the British North America Act that "in each province the legislature may make laws in relation to agriculture in the province"; it is also declared "that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, in the Dominion and in each of the nine provinces, though in each of two provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister.

### Subsection 1.—The Dominion Government

Subjects already dealt with under this heading in previous editions of the Year Book are: the Functions of the Dominion Department of Agriculture; the Dominion Experimental Farms System; the Prairie Farm Rehabilitation Program; the Historical Background of Canadian Agriculture; Noxious Forest Insects and Their Control and Agricultural Marketing Legislation, 1939. See list of special articles at the front of this edition.

## THE CANADIAN FARM LOAN BOARD\*

This Board was appointed by the Governor in Council under the provisions of the Canadian Farm Loan Act (c. 66, R.S.C. 1927, as amended by c. 46, Statutes of 1934 and c. 16, Statutes of 1935) and, as an agency of the Crown in the right of the Dominion, administers a system of long-term mortgage credit for farmers throughout Canada.

The Board is empowered to loan money to farmers for the payment of debts, for the purchase of farm equipment and live stock, to assist in the purchase of farm lands, for farm improvements or for any other purpose considered as improving the value of the land for agricultural purposes.

Loans may be granted on the security of first mortgages on farm lands actually operated by the borrower up to an amount not exceeding 50 p.c. of the appraised value of such farm lands, but, in any event, not in excess of \$5,000 and such loans are repayable on an amortized plan of repayment over a period not exceeding 25 years.

In virtue of amendments to the Act enacted in 1935, the Board is also empowered to make additional advances to farmers, who, having obtained a first-mortgage loan from the Board, require additional funds, the amount of such additional advance is not to exceed 50 p.c. of the amount of the first-mortgage loan, nor

\* Revised by A. H. Brown, Secretary, Canadian Farm Loan Board, Ottawa.

the aggregate of first- and second-mortgage loans to exceed two-thirds of the appraised value of the farm lands mortgaged as security for the loan, nor in any event an aggregate amount of \$6,000. The current rate of interest on loans made by the Board is 5 p.c. on first-mortgage loans and 6 p.c. on second-mortgage loans. Operations are now carried on in all provinces of Canada.

Particulars regarding the capital requirements of the Board, rates of interest charged and other details appear at p. 185 of the 1940 Year Book.

### Subsection 2.—Provincial Departments of Agriculture\*

In past editions of the Year Book, outlines of the organization and work of the various Provincial Departments of Agriculture have been published under this heading. These are not subject to wide variation from year to year and, since the present edition covers a two-year period and it is therefore obligatory to save as much space as possible, they have not been repeated here. Reference may be made to pp. 190-195 of the 1942 Year Book where this material was last published. Following are the names and addresses of the Ministers or Deputy Ministers of the Provincial Departments of Agriculture to whom the reader is referred regarding questions of provincial administration.

PRINCE EDWARD ISLAND.—Hon. J. Walter Jones, Minister of Agriculture, Charlottetown, P.E.I.

NOVA SCOTIA.—Hon. John A. McDonald, Minister of Agriculture and Marketing, Halifax, N.S.

NEW BRUNSWICK.—J. K. King, B.S.A., Deputy Minister, Department of Agriculture, Fredericton, N.S.

QUEBEC.—L. P. Roy, D.S.A., Deputy Minister, Department of Agriculture, Quebec, Que.

ONTARIO.—W. R. Reek, Deputy Minister, Department of Agriculture, East Block, Toronto, Ont.

MANITOBA.—J. H. Evans, Deputy Minister, Department of Agriculture and Immigration, Winnipeg, Man.

SASKATCHEWAN.—F. H. Auld, Deputy Minister, Department of Agriculture, Regina, Sask.

ALBERTA.—O. S. Longman, Deputy Minister, Department of Agriculture, Edmonton, Alta.

BRITISH COLUMBIA.—J. B. Munro, Deputy Minister, Department of Agriculture, Victoria, B.C.

### Subsection 3.—Provincial Agricultural Colleges and Schools

#### AGRICULTURAL COLLEGES

##### Nova Scotia

**Nova Scotia Agricultural College, Truro.**—The Nova Scotia Agricultural College is equipped to give instruction in the various branches of agricultural education. The following courses are offered:—

1. *Farm Course.*—A five-month farm course is designed to give students condensed vocational training, combining demonstration, practice and study, in preparation for life on the farm and for citizenship.

2. *Degree Course.*—This course covers the first two years of the regular four-year degree course in agriculture, fitting the student for the farm, or for a position in technical or commercial agriculture.

3. *Short Courses.*—These are arranged from time to time, covering such subjects as grading of eggs and dressed poultry, beekeeping, farm mechanics, home crafts, etc.

\* For publications of provincial Departments of Agriculture, see Index, under "Publications of Provincial Governments".

4. *Home Study Courses.*—A number of courses are given by correspondence on such subjects as soils, field crops, animal husbandry, poultry, co-operative marketing and apiculture.

The College farm consists of approximately 300 acres, where several breeds of live stock are kept for teaching and demonstration purposes, and where cereal, forage and root crops are raised and suitable rotations practised. There is a horticultural department where vegetables and fruit crops are developed, and a department of poultry husbandry.

Since the instructors are also connected with the Provincial Department of Agriculture, they are constantly in touch with farm problems and agricultural organizations.

The Extension Division of the Department of Agriculture, whose Director is head of the Economics Department at the College, conducts the extension work of the Province through agricultural representatives located in the various counties. This extension work includes the holding of short courses in various localities, the organization of boys' and girls' club work, the encouragement of the use and distribution of ground limestone, and a variety of other projects related to the farm and farm organizations.

The Provincial Chemist is head of the Chemistry Department at the College and has supervision over soil surveys and soil testing, general problems in soils and fertilizers, and the testing of soil water and feed samples.

The Provincial Entomologist, head of the Zoology and Entomology Departments at the College, has charge of various phases of extension work through spray circles for promoting orchard management and insect control.

The Provincial Botanist, in charge of the Department of Botany and Bacteriology at the College co-operates in spray-circle activities and conducts a provincial study of the botanical specimens of the Province.

The Provincial Agronomist, head of that department for the College, carries on the promotion of better seed through crop competitions, pasture improvement, etc.

The head of the Agricultural Engineering Division, besides his regular College work, carries on surveys in connection with drainage, ditching with power ditching machinery, laying of tile drains, machinery demonstrations, the use of explosives in ditching and land clearing, and supervises lightning-rod installation.

The Provincial Horticulturist, besides his duties as instructor in horticulture at the College, arranges orchard surveys and encourages improved methods in the growing of all fruits and vegetables.

The Provincial Animal Pathologist, who also instructs in the various phases of veterinary science, carries on certain extension work in the control of animal diseases, including a blood-testing laboratory for poultry and fur-farm extension work.

Beekkeeping is promoted throughout the Province by the Provincial Apiarist, who also heads that department at the College.

The Provincial Animal Husbandman, head of the Animal Husbandry Department at the College, carries on the various live-stock policies referring to stallions, and the breeders' policy for cattle, sheep and swine.

The Superintendent of Agricultural Associations and Exhibitions, instructor in farm management at the College, carries on a farm-planning project throughout the Province.

The Provincial Dairy Superintendent, in charge of dairy instruction at the College, also supervises creameries and dairy herd improvement work in the Province, and serves as Secretary of the Dairymen's Association of Nova Scotia, the Ice Cream Manufacturers' Association and the Dairy Arbitration Commission.

The Provincial Poultryman also acts as instructor in poultry husbandry at the College.

The Superintendent of Women's Institutes and Director of Home Economics and her assistants, carry on a great deal of field work, including numerous short courses in home crafts, as well as special courses at the College and throughout the Province.

### Quebec

**Macdonald College, Ste. Anne de Bellevue.**—Macdonald College is an incorporated college of McGill University and is situated twenty miles west of Montreal. It comprises: the Faculty of Agriculture; the School of Household Science; and the School for Teachers. Courses in agriculture include a four-year course leading to the B.Sc. (Agr.) degree and a two-year practical course for farmers' sons leading to a diploma. Postgraduate work leading to the degrees of M.Sc. and Ph.D., is available under the Faculty of Graduate Studies and Research of McGill University. The School of Household Science offers a four-year course leading to the B.H.S. degree and a one-year "Homemaker" course. The School for Teachers trains teachers for the Protestant schools of the Province of Quebec and grants elementary, intermediate, and kindergarten director diplomas. The Institute of Parasitology, operated by McGill University and the National Research Council, is situated on the College campus. Glenaladale, the staff community house, serves as an auxiliary laboratory for the students in the Household Science classes.

The College carries on extensive research work alone and in co-operation with the Provincial and Dominion Governments. Particular attention is paid to the creation and propagation of new and improved varieties of farm crops; to problems of plant and animal nutrition; to improvement of the pasture lands of the Province; to fertilizer and tillage experiments; and to the study of animal and plant pests.

Information obtained as a result of the experimental work is available in the form of free publications. The laboratories of the various departments of the College examine and report on specimens sent in by growers, and the field plots, orchards, stables and barns are open to visitors at all times. One department is a distribution centre for plans and blueprints for farm buildings and gives assistance with various farm construction and engineering problems, including the planning of drainage systems. Members of the staff assist with regional short courses throughout the Province and act as judges at agricultural and domestic-science exhibits at fairs, etc.

The teaching and experimental staff numbers about 70 members, and the total enrolment for the 1941-42 session was 150.

A "refresher" course, attended by 27 members of the Provincial Agronomic Service, was held for one week in June, 1941. Farm radio forums were also organized in various counties of the district.

At the request of the National Defence Department, a large number of offices and classrooms formerly used by the School for Teachers and by various departments of the Faculty of Agriculture are now occupied by the Canadian Women's Army Corps.

**Institut Agricole d'Oka, La Trappe.**—The Institute was founded in 1893. In 1908 it was affiliated to Laval University and is now affiliated with the University of Montreal.

The farm covers 1,800 acres and the diversity of soils makes possible the carrying out of extended experiments. The orchards cover about 67 acres, with nearly 4,000 fruit trees, and particular attention is directed to fruit culture, apple growing being a specialty. Live stock raised includes Belgian horses, Ayrshire and Holstein cattle, sheep and hogs. Some 2,000 hens are kept, the 'Chantecler' breed having been originated at the Institute.

In addition to the regular four-year course in agronomics, a two-year course is provided for farmers' sons, and short winter courses are offered to farmers at the request of the Provincial Department of Agriculture. During the past ten years, special emphasis has been placed on these short courses.

The Veterinary School provides a four-year course and in this field, during 1941-42, the research laboratory affected diagnoses for veterinaries and for the Dominion Department of Agriculture. It also co-operated with the Institute of Microbiology of the University of Montreal and carried on research work relative to the therapeutic preparations and applications of bactericide substances of microbial origin.

In addition to the province-wide activities of the Institute, special work has been done by the members of the staff in the Montreal district, such as research and farm contest work. Specialized work in the localities surrounding the Institute are the organization of a live-stock breeders' society in the County of Two Mountains, and an association of young breeders of baby chicks in the same county. The foundation of the Institut Rosell at Oka has done much to popularize 'yogourt' in Canada and has encouraged the making of pure starters for the production of this product at home.

For the past ten years the Institute has published literature on stock and poultry raising; botany; fruit, vegetable, and flower culture; and a four-volume course on general agriculture. A wide demand exists for these publications.

**Ecole Supérieure d'Agriculture de Sainte-Anne-de-la-Pocatière.**—This school, situated along the Lévis—Rivière-du-Loup line of the Canadian National Railway, has a regular student body of about 200 boarders. The school was established in 1859 by Abbé François Pilote. It now has a triple aim: agricultural research; agricultural instruction of all grades; and agricultural extension work by means of lectures, home courses, co-operation courses, exhibitions, etc.

Its regular curriculum includes a superior course in agriculture of four years duration, open to selected students in possession of the degree of Bachelor of Arts; an agronomic course of three years open to all Bachelors of Arts; two courses in practical agriculture for farmers' sons, one of which covers twelve months of study divided into two winter semesters and the other only one winter semester. The Ecole Supérieure is affiliated with Laval University of Quebec. The Faculty of Sciences confers on its graduates the degree of B.Ag. Sc. (Bachelor of Agricultural Sciences). The agronomic course is completed with the B.A. diploma (Bachelor in Agriculture). A certificate of agricultural ability is conferred on farmers' sons who complete the prescribed course.

The Ecole de Sainte-Anne operates a mixed culture farm covering 500 acres. Its herd of Ayrshire cows is of special value. The departments of poultry and fruit and garden horticulture are organized for the training of specialists in these lines.

About 250 farmers' sons have been given six-week courses in co-operation with the Dominion-Provincial Youth Training Plan.

## Ontario

**Ontario Agricultural College and Experimental Farm, Guelph.**—The College farm consists of approximately 1,000 acres, with a splendid layout of barns, implement sheds, and workshops; while the College proper has a magnificent campus with twenty-six large buildings which provide classrooms, laboratories, offices, dormitories, dining halls, auditoriums and recreation facilities.

The College has three divisions: Agriculture; Home Economics, known as Macdonald Institute, taking this name from Sir William Macdonald who provided funds to construct and equip the first two buildings for this division; and Commercial Baking, known as Trent Institute, taking the name from Mr. H. E. Trent, founder of the Canadian Bread and Cake Bakers' Association, who donated funds for the one building used by this division.

In addition to the regular courses of instruction many specialized short courses, from ten days to three months in length, are offered to various farm groups. College instructors also assist at a large number of short courses conducted throughout the Province under the leadership of the district representatives of the Department of Agriculture.

Research and demonstration form an important part of the work of the College. O.A.C. No. 21 and Nobarb varieties of barley; Alaska O.A.C. No. 157 and Erban varieties of oats; Dawson's Golden Chaff O.A.C. No. 61 winter wheat; O.A.C. No. 181 field peas; and O.A.C. No. 211 soybeans are notable varieties, all originated at the College and most of them are now in quite general use in Ontario.

The Ontario Experimental Union, an organization of farmers working with the College, has done much in testing and introducing these superior varieties in the farming districts.

In co-operation with the Central Experimental Farms of the Dominion Department of Agriculture soil surveys of 20 counties have been completed and maps prepared. A broad reconnaissance survey has been made in five of the main agricultural areas of northern Ontario. Surveys will be continued as rapidly as conditions permit.

Several thousand soil samples are received from farmers each year. These are analysed and recommendations are made for soil treatment and crop management.

From the College herds and flocks, which are maintained at a high standard of excellence and carry some of the best producing blood lines, the surplus breeding stock is sold to farmers. In this way a very direct and material improvement has been made in live-stock production.

Through the Departments of Animal Husbandry, Field Crops, Poultry, Agricultural Engineering, Animal Nutrition, Extension, Horticulture, Dairying, Apiculture, Chemistry, Botany, Entomology, Bacteriology and Economics, an active relationship is maintained with the farmers, and very helpful service is rendered to them on the many problems confronting agriculture.

## Manitoba

**Faculty of Agriculture and Home Economics, University of Manitoba, Winnipeg.**—Members of the Faculty of Agriculture and Home Economics assist in promoting the interests of agriculture in Manitoba through student instruction, research, demonstrations to visiting agricultural groups, country meetings, the press, and through personal contacts with farmers and farm women and other people interested in agriculture.

During the past five years, May 1, 1938, to Apr. 30, 1943, the average yearly attendance in agriculture and home economics was 566 students. In the long courses in agriculture the attendance averaged 125, while the average attendance at agricultural short courses was 137. In home economics the attendance averaged 304. During 1942-43, 94 p.c. of the students enrolled in all agricultural courses came from Manitoba and of these 71 p.c. came from outside Winnipeg. Manitoba students made up 75 p.c. of the students enrolled in home economics.

Research work is being carried on both in agriculture and in home economics. Investigations are being conducted in beekeeping, dairy bacteriology, dairying, fertilizers, field crops, forage crops, insect control, live stock, potato breeding, poultry breeding, thiamin content of Canadian foods, soils, soil bacteriology and vegetable growing. All of these projects are designed to be of use to agriculturists in Manitoba.

Each year groups of producers and other interested citizens visit the University at special gatherings. During the past few years these meetings have been held for agricultural representatives, beekeepers, calf club members, corn and forage crop growers, dairy-cattle breeders, fur farmers, live-stock judging classes, Manitoba loan inspectors, poultry raisers, rural land appraisers, seed growers, swine club members and vegetable and potato growers. Many of these gatherings have taken the form of field days and have been held during the summer. Members of the Extension Service, Manitoba Department of Agriculture, frequently join with the members of the Faculty of Agriculture and Home Economics in providing information at these gatherings. At country meetings arranged by the Manitoba Department of agriculture members of the Faculty in turn take part frequently.

During the year 1942-43 members of the Faculty prepared and had printed 64 papers in the form of journal articles, agricultural press articles, bulletins and circulars.

Contact is maintained with the people of Manitoba by means of correspondence and the telephone. Continuously throughout the year inquiries are received from farmers, farmers' wives and others, for information in connection with their problems which include a very wide range of topics.

### **Saskatchewan**

**College of Agriculture, University of Saskatchewan, Saskatoon.**—The College of Agriculture occupies a central place in the agricultural life of the Province. On the academic side it offers a four-year course leading to the degree of Bachelor of Science in Agriculture (B.S.A.) and a two-year course of five months each winter leading to a Diploma in the School of Agriculture. Through its investigations, the College aims to serve the farmers of the Province by studying their problems and by means of practical demonstrations to encourage the use of better farming methods. Much attention has been given in recent years to methods of controlling soil drifting, breeding of rust-resistant wheat, research in weed control, live-stock improvement and management, animal diseases, farm machinery, soil surveys, and farm management. The College farm provides a source of well-bred live stock, poultry, grains, grasses and horticultural plants.

Contact with the farmers of the Province is maintained through various activities of the Extension Department in which all members of the College staff participate. Field demonstrations in the summer and short courses in the winter help to translate the results of investigations into farming practice. Organized activities of various kinds are arranged through agricultural societies and many other community organizations directed by the head of the Extension Department, homemakers' clubs,

homecraft clubs, and boys' and girls' clubs provide valuable instruments for rural education. Finally the Dominion-Provincial Youth Training Program in rural areas may be mentioned; this is directed by the office of the Extension Department and consists of short courses of from three days to eight weeks duration held in community centres throughout the Province, and longer courses of six weeks to five months, held at the College.

The University is also the centre for many agricultural conventions and meetings throughout the year. Such occasions provide opportunities for lectures and demonstrations on matters of practical importance to farmers. The Extension Department supervises agricultural fairs throughout the Province and provides judges. It is also the provincial headquarters for Radio Farm Forum. Cordial and close co-operation is maintained with the Provincial Department of Agriculture and with Dominion Experimental Farms.

## Alberta

**Faculty of Agriculture, University of Alberta, Edmonton.**—In the Faculty of Agriculture a four-year course leading to the degree of B.Sc. in agriculture is offered. The courses offered during the first two years provide for training in the fundamental sciences and introduce the student to a variety of phases of agriculture. After the first two years are completed the student may elect a general course in agriculture or arrangements may be made to undertake a certain degree of specialization.

Students may enter the course in agriculture directly from the high schools on a basis of senior matriculation or from one of the Provincial Schools of Agriculture with junior matriculation plus the school diploma.

In addition to the regular degree course an annual short course is conducted by the Department of Dairying in co-operation with the Alberta Department of Agriculture. Recently a Babcock testing course for women has been added. These courses are proving a valuable aid to the dairy industry.

Research and extension activities occupy a considerable portion of the time of the staff of the Faculty of Agriculture. Every opportunity is taken to maintain a close contact with the farm people of Alberta. The results of research are made available by means of bulletins and circulars, radio talks, lectures at farm meetings, agricultural short courses and field days, and direct correspondence with individuals who request specific information. Close co-operation is offered by all departments to the Department of Extension of the University of Alberta and the Extension Service of the Alberta Department of Agriculture.

Tracts of land are available to the Departments of Field Crops, Soils and Horticulture for plot trials and a farm of approximately 700 acres is maintained by the Department of Animal Science. This arrangement makes it possible to tie together laboratory research and field experiments. Certain departments carry out co-operative tests with farmers in various parts of the Province.

The Department of Animal Science places special emphasis on feeding experiments with beef and dairy cattle, sheep and swine. The annual Feeders' Day held in June each year provides a special opportunity to discuss the results of these investigations with farmers and feeders who gather for the occasion. Poultry research is also carried on.

The Department of Field Crops is divided into sections dealing with plant breeding, plant biochemistry and plant pathology. An active program of research is under way in each of the various sections. Financial assistance received from the

National Research Council, the United Grain Growers, Limited, the Alberta Wheat Pool and the Canada Malting Company has been most helpful in maintaining certain projects.

Soil survey work, carried on in co-operation with the Dominion Department of Agriculture, constitutes one of the main features of the work of the Department of Soils. In addition, fertilizer treatments and legume inoculations as applied to the grey wooded soils is given special attention.

In dairying, agricultural engineering, horticulture and entomology, survey and experimental work is undertaken up to the limit of available personnel and facilities.

In all departments special emphasis is laid on the type of investigation that will aid in the successful prosecution of the War.

### **British Columbia**

**Faculty of Agriculture, University of British Columbia, Vancouver.**—The Faculty of Agriculture is an integral part of the University of British Columbia. There are six departments in the Faculty: Agronomy, Animal Husbandry, Dairying, Horticulture, Poultry Husbandry, and Agricultural Economics. Students may specialize in these Departments and, in addition, because of the close association with the other Faculties of the University, may do special work in plant pathology, plant nutrition, genetics, entomology, soil chemistry, and bacteriology and allied science subjects in relation to agriculture.

The extension activities of the Faculty are under the direction of the head of the Department of University Extension. The activities consist mainly of single individual lectures, lecture series, and night classes in horticulture and poultry husbandry. Short courses under the Dominion-Provincial Youth Training Plan have been cancelled for the duration of the War.

The services to farmers include only those activities for which laboratory facilities are required, such as chemical and bacteriological examination of soil samples, examinations for mineral deficiencies in plants, diagnoses of poultry diseases, examinations of milk, butter, and cheese samples, poultry blood-testing for pullorum disease, and other related activities.

At the present time an important project in the field laboratory is the production of Elite seed of varieties of field crops that are grown in the Province. This is in co-operation with the Provincial Department of Agriculture. The project that has to do with the breeding and selection of an underground spreading type of alfalfa is reaching an interesting stage and a quantity of seed was produced in 1943. The project is being conducted in co-operation with the Dominion Department of Agriculture.

Research activities, other than those being carried on by students under direction, include: causes of raspberry failure, paralysis and coccidiosis in poultry, surface taint in butter, the value and uses of fish oils and similar problems in relation to agriculture. Progress has been made in the improvement of the Cambar breed of poultry brought from Cambridge University, England.

The members of the Faculty are on call in their offices for special consultations on agricultural problems, and also answer about seven thousand letters per year from correspondents seeking information in relation to their immediate difficulties.

## AGRICULTURAL SCHOOLS

In addition to agricultural colleges, three of the provinces conduct agricultural schools with shorter courses similar to the diploma courses in the colleges. An outline of the work of these schools follows.

### New Brunswick

Until the outbreak of war, the New Brunswick Department of Agriculture operated an agricultural school at Fredericton, but these facilities have been taken over by the military authorities and the courses discontinued. The Vocational Committee of New Brunswick, however, operates an agricultural school at Woodstock. Information in regard to the courses covered may be obtained on application to the school.

### Quebec

**Elementary Schools.**—Elementary agricultural education is given in regional or district schools and also in agricultural orphanages. District schools operate in the following locations: Magdalen Islands, Val d'Espoir (Gaspé), Ste-Croix (Lotbinière), Mont-Laurier (Labelle), Ste-Thérèse (Terrebonne), La Ferme (Abitibi), St-Denis (Richelieu), St-Césaire (Rouville), Yamachiche (St-Maurice), St-Barthélemy (Maskinongé), Beauceville (Beauce), St-Rémi (Napierville), La Pêrade (Champlain). Farmers' sons who have completed at least their sixth form in primary schools are admitted. At the end of a two-year course, the student receives a certificate in agriculture.

The agricultural orphanages giving similar education to orphans adapted to the work are situated at St-Ferdinand (Mégantic), Ste-Germaine (Dorchester), Lac Sergent (Portneuf), Sully (Témiscouata), St-Damien (Bellechasse), St-Jean Bosco (Québec).

**Intermediary or Secondary Schools.**—Secondary agricultural education is given by the middle schools of Rimouski, Ste-Martine, Nicolet, Chicoutimi and Ville-Marie to pupils completing the elementary training. After a two-year theoretical and practical course, the student receives a diploma in agriculture. This course also includes instruction in other trades directly connected with agricultural life.

**Special Schools.**—There are a number of schools in the Province that give courses in particular subjects related to agriculture:

*School of Dairy Industry, St-Hyacinthe.*—This school gives instruction in the making of butter and cheese, the inspection of dairy products, etc. In its laboratory special research work is done on the fabrication of certain brands of cheese that until recently have been imported from Europe.

*Schools of Household Science.*—About twenty of these schools, supported by the Government, give instruction to future farm housekeepers. Students completing the course receive the degree of bachelor of household science or a certificate.

*Schools for Domestic Arts and Handicraft.*—Two schools of this nature teach such arts as pottery, cabinet-work, etc.

*Provincial Farm School, La Gorgendière.*—This is a Government farm which trains each year a certain number of students anxious to devote themselves to agricultural practice, animal husbandry, field crops or horticulture.

## Ontario

**Kemptville Agricultural School.**—The Kemptville Agricultural School which is operated by the Ontario Department of Agriculture for the benefit of agriculture in eastern Ontario, now offers restricted accommodation due to the fact that four of the main buildings have been lent to the Department of National Defence for a School of Army Administration.

The remaining accommodation, consisting of one classroom building, barns and farm, form the nucleus for instruction, experimental and extension work. The longer term courses in agriculture and home economics have been cancelled and a three-month course for cheese- and butter-makers is carried on during the winter. Throughout the whole year a service is maintained to supply cultures to the many cheese factories.

An extension program is conducted which deals with experimental work with soils and fertilizers, including variety test work with cereal crops, and a soil-testing laboratory is maintained.

Poultry extension includes assistance to poultry raisers in feeding, management and control of diseases. This is a service for which there is a great deal of demand. Besides the extension work, a high-class breeding flock is maintained for the improvement of the poultry flocks in eastern Ontario.

Extension work is also carried on with orchard and horticultural crops and gardens and orchards are maintained for production and experimental work.

Breeding herds of dairy cattle and swine are also maintained for the distribution of purebred sires and females, which are widely distributed over eastern Ontario.

## Alberta

**School of Agriculture, Olds.**—The school was established in 1913 to provide additional education to the young people from the farms of Alberta. The school is operated by the Department of Agriculture. Most of the students come from the rural areas but others are admitted. While the majority of those who enroll have taken one to three years of high school work this is not a pre-requisite for admission. The two-year course in agriculture is planned to acquaint students with the principles underlying successful farming. The majority of the graduates return to the farms, but a few each year proceed to the University for the degree course in agriculture. The two-year course in home economics is primarily one for homemakers and specializes in sewing, cooking, dietetics, home nursing and household administration, but some attention is given to horticulture, poultry, and rural sociology. Some of the graduates proceed to the University to study for the degree of B.H.Ec.

The school carries on considerable experimental work with feed and horticultural crops. Several hundred varieties of apples, crabs, plums, cherries, apricots and pears are under test, as well as small fruits. A number of fruit plantations in the district are supervised.

A farm of one section is operated in connection with the school. The live stock kept, consisting of Percheron horses, Shorthorn, Angus, Ayrshire and Holstein cattle, Yorkshire hogs and Hampshire sheep, are used for class purposes and as a source of breeding stock for the district. A start is being made this year in initiating an artificial insemination program. A laboratory has been built and breeding centres are being organized.

During the summer months the school is utilized for short courses for students connected with the junior clubs of the Province—crops, stock, gardens and homes. Other courses are provided from time to time for special groups.

## Section 2.—Statistics of Agriculture\*

**Crop-Reporting Service.**—Through the voluntary crop-reporting service of the Dominion Government, accurate, timely and independent reports on crop conditions throughout the Dominion are published; up to the entry of Italy into the War, periodic reports were made to the International Institute of Agriculture at Rome (to which Canada is an adhering country) in return for reports on the production of other countries and of world totals that influence prices and consequently affect the interest of Canada.

**Census Statistics.**—In addition to the statistics collected annually, which are the subject of this section, valuable information is published following each decennial census of the Dominion and each quinquennial census of the Prairie Provinces. Details of such census statistics, published following the Censuses of 1931 and 1936, are given at p. 152 of the 1941 Year Book.

### Subsection 1.—Value of Agricultural Production and of Farm Capital

**Value of Agricultural Production.**—It is important to note that the figures of value of commodities produced on Canadian farms, shown in Table 3, represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production. The total revenue for 1942 showed an increase of 49.1 p.c. as compared with 1941. Higher values were shown for all commodities with the exception of clover and grass seed and fibre flax, the greatest increase being in the value of field crops. There were also substantial increases in the values of farm animals, milk, eggs and poultry.

---

\*Revised in the Agricultural Branch, Dominion Bureau of Statistics. This Branch collects and publishes both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, dairying, milling, and sugar industries and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXX, Sect. 1, under "Production".

<sup>1</sup> Subject to revision.

**Value of Farm Capital.**—The items included in the term "farm capital" as used in Table 4 are: lands and buildings; implements and machinery, including motor-trucks and automobiles; and live stock, including poultry and animals on fur farms. Values of lands, buildings, implements and machinery were reported at the decennial censuses of 1931 and 1941. Changes in the total value of lands and buildings for the years 1932 to 1942 have been based on the value of occupied farm lands reported annually by crop correspondents, while those in the annual values of farm implements and machinery have been estimated on the basis of sales reported each year.

#### 4.—Current Value of Farm Capital in Canada, by Provinces, 1941 and 1942

NOTE.—Figures in this table are subject to revision on basis of the 1941 Census.

Province	1941 <sup>1</sup>				1942

<sup>1</sup> Based on preliminary 1941 Census data.

**Average Values of Farm Lands.**—The average values per acre of farm lands are as estimated by crop correspondents and show the rise in land values between 1910 and 1920, the general decline with moderate fluctuations from 1920 to 1929 and the rapid fall since 1929 to a point below the 1910 level for the country as a whole.

### Subsection 2.—Acreages, Yields and Values of Field Crops

Emphasis was placed on the production of feed grain crops in 1942 and again in 1943. Canadian farmers responded to the objectives set at the Dominion Provincial Agricultural Conference, and notable increases in acreage seeded to oats, barley and other crops took place. The wheat acreage did not change much in 1942, but in 1943 it was reduced to 17,500,000 acres, its lowest level since 1918. Payments were made under the Wheat Acreage Reduction Act to those farmers who utilized wheat acreage for the production of more essential crops.

Substantial increases were made also in the acreage devoted to the production of flaxseed, while in 1943 acreage was set aside in Western Canada for the production of sunflower seed and rapeseed, both oil-producing crops of high value and urgently required. The area under summerfallow in Western Canada continued at a high level, although somewhat reduced from the record figure of 23,000,000 acres in 1941, the first year in which payments were made for wheat acreage reduction.

Tremendous crops of grain were produced in 1942, one of the best seasons on record, but in 1943 which was a very poor season, the output was smaller in Eastern Canada and patchy in the west. Cold, wet weather in the eastern provinces prevented seeding in many areas, while in the prairie sections losses were incurred through drought and insect damage.

The total gross farm value of all the field crops produced on 60,345,600 acres in 1943 was \$1,104,065,000 compared with \$1,179,073,000, the estimated value of crops produced on 60,809,200 acres in 1942.

### 6.—Acreages and Values of Field Crops in Canada, by Provinces, 1938-43

NOTE.—For earlier figures, see Statistical Summary at the beginning of this volume.

<sup>1</sup> Revised since the publication of the 1942 Year Book.

## 7.—Acreages, Yields and Values of Principal Field Crops Grown in Canada

NOTE.—Comparative figures for the Dominion as a whole, for the years 1908-28 are given in the Canada Year Book, 1929, pp. 230-232 and for 1929-35 in the Canada Year Book, 1939, pp. 203-204. For certain figures for earlier years on acreage, production and value, see Statistical Summary of the Progress of Canada at the beginning of this volume. For the majority of crops, the long-time average covers the years 1908-40. Many of the figures for 1941 have been revised since the publication of the 1942 Year Book. Statistics for 1943 are subject to revision.

<sup>1</sup> Revised since the publication of the 1942 Year Book.

**Stocks of Grain in Canada.**—Table 9 sets out the stocks of Canadian grain on hand on July 31, for the years 1934-43. The data have been broken down to show the total both in Canada and the United States as well as the amounts held on farms at that date. Figures of farm stocks show amounts for Canada and the Prairie Provinces separately, while an additional column indicates the amounts held in country elevators in the Prairie Provinces.

## 9.—Carryover of Canadian Grain as at July 31, 1934-43

### Subsection 3.—Farm Live Stock and Poultry

**Live Stock.**—The growth of the live-stock industry in Canada from decade to decade is indicated in summary form in Table 10.

#### 10.—Live Stock on Farms in Canada, Censuses of 1871-1941

NOTE.—Statistics of poultry, formerly shown in this table, now appear in Table 14, p. 226.

Item	1871	1881	1891	1901	1911	1921 <sup>1</sup>	1931	1941 <sup>2</sup>
	No.	No.	No.	No.	No.	No.	No.	No.
Horses.....	836,743	1,059,358	1,470,572	1,577,493	2,598,958	3,610,494	3,113,909	2,789,391

1939.....	83.7	102.6	90.6	98.1	97.9
1940.....	84.7	103.2	92.0	100.6	134.1
1941.....	82.7	95.1	97.0	83.4	138.9
1942.....	83.5	97.5	103.7	93.2	162.4
1943.....	82.3	100.5	115.6	100.8	185.8

The numbers of live stock on farms in Canada and in the different provinces are shown for the five latest years in Table 12, while average values per head are shown for the same years in Table 13. Statistics for total cattle, together with total values for each kind of live stock, are given in the "Quarterly Bulletin of Agricultural Statistics" for January-March, 1944.

**12.—Numbers of Farm Live Stock in Canada, by Provinces, June 1, 1939-43**

Note.—Statistics of poultry, formerly shown in this table, now appear in Table 14, p. 226.

<sup>1</sup> Figures not strictly comparable; 1943 average values June 1, previous years Dec. 1.

**Poultry Products.**—The expansion of the poultry industry in Canada during the past four years has been an important war-time development. The shipment of eggs to the United Kingdom (mostly in the form of egg powder) has provided much-needed food supplies for the British people. Both poultry and eggs have also been shipped in large quantities to supply the Canadian Armed Forces overseas. Producers of poultry products have made a splendid response to this demand. It will be seen from Table 14 that the population of hens and chickens as shown at June 1, 1943, was 15 p.c. above that of the same date in 1942. There was a decline in turkeys, geese and ducks but, regardless of this recession, total poultry showed an increase of 7 p.c. The production of poultry meat in 1943 was 263,000,000 lb. as compared with 259,000,000 lb. in 1942. Farm egg production was estimated at 315,000,000 doz. as against 280,000,000 doz. in the previous year, and the average

<sup>1</sup> Includes geese and ducks.

value per dozen was 31·8 cents as compared with 29·0 cents. The total value of poultry was approximately \$106,000,000, while eggs were valued at \$100,000,000. Sales income from poultry and eggs amounted to \$124,000,000 in 1943 as against \$98,000,000 in 1942. The domestic disappearance of poultry meat (based on both farm and urban production) was 268,000,000 lb. Due principally to the decline in turkeys, this represented a reduction of 6,000,000 lb. from the previous year. The domestic disappearance of eggs reached the high point of 280,000,000 doz. in 1943, an advance of 23,000,000 doz. over that of the previous year. The 1943 figures represent a per capita disappearance of approximately 23 lb. of poultry meat and 24 doz. eggs, as compared with 23·5 lb. and 22 doz. in 1942.

<sup>1</sup> Based on population figures as given at p. 141.

**Wool Production.**—Shorn-wool production in Canada for 1943 totalled 13,929,000 lb. with a value of \$3,790,000. This was the highest production established and the increase in price due to the War resulted in a total value higher than any other on record. Pulled-wool production amounted to 5,036,000 lb., making total wool production in Canada 18,965,000 lb.

Canadian wool imports during 1943, on a greasy basis, are estimated at 104,364,000 lb. The exceptionally high imports, as well as the greater production, resulted in an apparent consumption of 121,013,000 lb. The much higher consumption since 1940 has been due to the extensive use of wool in manufacturing uniforms for the Armed Forces.

# 17.—Estimated Production, Exports, Imports and Apparent Consumption of Wool in Canada, 1930-43

NOTE.—All estimates are on a 'greasy' basis: the exports and imports shown in the 1939 and previous Year Books were only partly on a 'greasy' basis. Comparable statistics of production for the years 1920-29 are given at p. 219 of the 1939 Year Book.

<sup>1</sup> Figures for 1931 to 1941 have been revised since the publication of the 1942 Year Book.

## Subsection 4.—Dairying

During the past two years the dairy industry of Canada has successfully met the challenge imposed by war-time conditions, in producing increased quantities of dairy products for use at home and abroad. Despite acute labour shortages, the production of milk on farms has been maintained at a high level, and while 1942-43 exports of cheese and concentrated milk products were considerably above those of the pre-war period, domestic supplies of fluid milk, butter and other products far surpassed the quantities provided for home consumption in previous years. As might be expected, price relationships determined the trend in production. During the first half of 1942, prices were more favourable to cheese production; but with the creation of a subsidized market for butter-fat, a competitive situation developed in the latter part of the season, and in 1943 a large proportion of the milk supply was diverted into the butter manufacturing channel. This reduced the volume of cheese available for export to the United Kingdom, but permitted the creation of reserve stocks of creamery butter, a part of which was shipped to the United Kingdom at a time when supplies were needed to maintain the British ration at the normal level.

**Milk Production.**—The production of milk on farms in 1943 has been estimated at 17,500,000,000 lb., representing a fractional increase over that of the preceding year. Manufactured products utilized 11,300,000,000 lb. or 65 p.c. of the total quantity in 1943 as against 11,600,000,000 lb. or 66 p.c. in the preceding twelve-month period. Fluid milk sales amounted to 3,700,000,000 lb. in 1943 as compared with 3,400,000,000 lb. in 1942. The former represented 21 p.c., and the latter 19 p.c. of the total production. It will be observed that a part of the increase was obtained at the expense of manufactured products, which utilized lesser quantities than in 1942.

The concentration of the population in military and industrial centres would appear to be one of the chief factors contributing to the increased demand for fluid products. Ontario and Quebec produced approximately 61 p.c. of the total supply, the Prairie Provinces 30 p.c., the Maritimes 6 p.c. and British Columbia

3 p.c. There were 3,795,000 cows on farms at June 1, as compared with 3,680,000 at the same date in 1942, but production per cow at 4,616 lb., was 136 lb. less than in 1942. The proportion of cows actually milking was estimated to average 77 p.c. in 1943 as against 74 p.c. in 1942.

**Butter Production.**—The 1943 creamery butter output of 312,000,000 lb. was the largest volume of butter ever produced in Canada, representing an increase of 28,000,000 lb. over that of the preceding year. The production of creamery butter was affected by the institution of a 6-cent subsidy paid by the Government as from July 6, 1942, and a 10-cent subsidy from Jan. 1 to May 1, 1943. To give further encouragement to the creamery industry, this subsidy was increased to 8 cents a lb. during the period May 1 to Dec. 31, 1943. It should be noted, however, that while the subsidy increased the creamery output, it discouraged the manufacture of dairy butter on farms. Hence, the output of the farm-made product fell to approximately 79,000,000 lb. in 1942 and to 55,000,000 lb. in 1943. The 1943 decline almost offset the increase recorded in the creamery make, so that the total production of 368,000,000 lb. in 1943 was only about 5,000,000 lb. greater than that produced in the preceding year. Of this total, Ontario and Quebec produced approximately 50 p.c., the Prairie Provinces 41 p.c., the Maritimes 7 p.c. and British Columbia 2 p.c. All provinces but the latter recorded increases in the creamery butter make during 1943, as compared with 1942, while dairy butter production suffered declines throughout the Dominion.

**Cheese Production.**—The output of Canadian cheddar in 1942 was approximately 206,000,000 lb., the highest make since 1900 when nearly 221,000,000 lb. were produced in Canadian factories. In 1943, the quantity of cheese manufactured in Canada fell to approximately 162,000,000 lb. Nevertheless, this amount exceeded the output of all previous years since 1926. The amount produced in Quebec and Ontario represented approximately 94 p.c. of the total production in 1943; Manitoba and Alberta contributed nearly 4 p.c., while the remaining 2 p.c. was produced in Prince Edward Island, New Brunswick, Saskatchewan and British Columbia. In order to give further encouragement to cheese manufacturing, a subsidy of 30 cents a cwt. was offered by the Government for milk delivered to cheese factories as from Oct. 1, 1943. Under an agreement with the Government of the United Kingdom, arrangements were made for the shipment of 125,000,000 lb. of cheese to the British Ministry of Food during the fiscal year 1942-43. Actual shipments, of course, greatly exceeded this amount. The 1943-44 contract called for the delivery of 150,000,000 lb., but, owing to the decline in production, it was impossible to meet this objective. Nevertheless, over-shipments of the 1942 make, exported in 1943, increased the total deliveries to the United Kingdom to approximately 92 p.c. of the amount exported in the previous year.

**Cheese and Butter Prices.**—The price of cheese in 1942 was set at 20 cents a lb. f.o.b. Montreal, compared with 16 cents received by producers during the latter part of 1941. In 1943 a further increase was ordered by establishing the price at 20 cents f.o.b. factory instead of f.o.b. Montreal. The quality bonus paid by the Dominion Government gave producers an average of about 9/10ths of a cent per lb. over and above the basic price, and in Ontario, where the Government continued to pay the bonus of 2 cents a lb. on all cheese manufactured, the total price was approximately 23 cents a lb. at the factory. Throughout the first four months of 1942, producers were able to market first-grade cheese at prices averaging between 24 and 25 cents f.o.b. Montreal; but in subsequent months, the lower price in effect brought the yearly average down to 21½ cents. In 1943, the average was

approximately the same as in 1942. Maximum wholesale prices for cheddar cheese were introduced by the Wartime Prices and Trade Board in the spring of 1942, first-grade cheese being 22 to 24 cents, depending on the score. Cheese scoring 87 to 92 is subject to a further reduction of  $1\frac{1}{2}$  cents. A more detailed price schedule was issued on June 2, 1943, but in the main the price basis was unchanged.

Creamery butter prices, set up under an amended order of the Wartime Prices and Trade Board in 1943 provided the following maximums for first-grade solids: in the Maritime Provinces, 36 cents a lb.; in Quebec, Ontario and British Columbia, 35 cents; and in the three Prairie Provinces, 33 cents. A discount of 1 cent per lb. was allowed on each grade below first grade. To protect the interests of producers, floor prices for 1943-44 were established by the Department of Agriculture, setting minimum price levels for the month of May at 33 cents, 32 cents and 30 cents in the three economic divisions mentioned. Provision was made for upward adjustments during each succeeding month to April, 1944, when minimum prices reached the high point of  $35\frac{3}{4}$  cents,  $34\frac{5}{8}$  cents, and  $35\frac{5}{8}$  cents, respectively. Ceiling prices on dairy butter were established in 1943, placing sales to consumers at 42 cents, 40 cents and 38 cents, respectively. Sales to wholesalers were reduced 4 to 5 cents a lb. and sales to retailers by  $2\frac{1}{2}$  to  $3\frac{1}{2}$  cents. Provision was also made for surplus butter to be sold to the Wartime Prices Stabilization Corporation at a discount of 7 cents below the prices quoted. Whey butter was placed under ceiling restrictions in June, 1943, the maximum price to consumers being set at 40 cents, 39 cents and 37 cents, respectively. Direct sales to wholesalers are subject to a discount of 5 cents a lb.; while indirect sales through distributors show a difference of 3 cents between such distributors price to retailers and that charged to consumers.

**Value and Income.**—The farm value of milk was estimated at \$291,000,000 in 1942, and moved up to \$319,000,000 in 1943. The total value of all products was approximately \$367,000,000 and \$383,000,000, respectively. Income received by farmers increased from \$265,000,000 to \$290,000,000 between 1942 and 1943. In 1939 the income from dairy products represented 15·8 p.c. of the total farm income for that year, while in 1943 it advanced to 17·8 p.c. Higher prices (including subsidies paid by the Government) during the past two years, were responsible for this development. Fluid milk producers received a subsidy of 30 cents a hundred in the winter period of 1941-42 on markets where price advances had not taken place. A subsidy of 25 cents a hundred went into effect on Sept. 1, 1942, on the principal milk markets of Canada, and on Oct. 1, 1943, the subsidy was increased to 55 cents a hundred. Since Dec. 16, 1942, consumers have also benefited by a subsidy of 2 cents a quart on milk purchased. Concentrated milk producers received a subsidy of 40 cents a hundred during the winter period of 1941-42. This was subsequently discontinued, but a subsidy of 25 cents a hundred was ordered in 1942, covering March and April, 1942, and October to April, 1943-44. Commencing Oct. 1, 1943, this was increased to 30 cents a hundred, and was made applicable to milk used in the production of skim milk powder as well as whole milk products. Estimates made for the year 1943 show that farmers received an average of \$2·28 per hundred for fluid milk, \$2·06 for milk delivered to concentrated plants, \$1·49 for milk used for the production of ice cream, and \$1·59 for milk used in the production of creamery butter.

**Domestic Disappearance.**—The domestic disappearance of butter (including creamery, dairy and whey butter) amounted to 386,000,000 lb. in 1942 and 337,000,000 lb. in 1943. On a per capita basis, the creamery product decreased

from 26.15 lb. to 23.67 lb. in 1943. This reduction may be credited to the introduction of rationing, which went into effect on Dec. 21, 1942. The disappearance of dairy butter also registered a decline from 6.74 lb. to 4.70 lb., while whey butter decreased from 0.25 lb. in 1942 to 0.18 lb. in 1943. The disappearance of cheese in Canada showed a slight increase from 1942 to 1943, the figures being approximately 47,000,000 lb. and 53,000,000 lb., respectively, or 4.07 and 4.47 lb. per capita. These figures include cheddar, other varieties of whole milk cheese, and farm-made cheese; the former representing approximately 98 p.c. of the 1943 make. The consumption of fluid milk in 1942 (including cream on a milk basis) amounted to almost 3,854,000,000 pints. In 1943 it advanced to 4,125,000,000 pints, and the daily per capita consumption of 0.91 pints moved up to 0.96 pints. The milk-producing population consumed an average of 1.40 pints per capita per day in 1942 and 1.43 pints in 1943. The non-producing population, on the other hand, which is required to purchase its milk supply, showed a daily per capita consumption of 0.77 pints in 1942 and 0.82 pints in 1943.

### 18.—Total Milk Production of Canada, by Provinces, 1942 and 1943

<sup>1</sup> Includes all concentrated milk products, ice cream, whey butter and sundries, the totals of which in 1943 amounted to \$26,570,828, \$21,649,535, \$682,900, and \$2,739,723, respectively.

## 22.—Total Value and Farm Value of Dairy Production and Income from Dairying in Canada, by Provinces, 1942 and 1943

NOTE.—Total value represents the addition of all items shown in Table 21. Gross income represents farm value less the value of milk fed to calves. Sales income represents the value of all products sold off farms (milk, butterfat and dairy butter).

Province and Year	Total Value of Products	Farm Value of Milk	Farm Income from Dairy Products		In Dollars per Hundred Pounds of Milk Produced			
			Gross	Sales	Total Value	Farm Value	Gross Income	Sales Income
	\$	\$	\$	\$	\$	\$	\$	\$

## 23.—Estimated Consumption of Milk in Canada, by Provinces, 1942 and 1943

NOTE.—The term "milk producer" includes that part of the population located on farms in rural areas and urban properties where cows are kept. Hence milk producers supply the milk required in their own homes while non-producers purchase their requirements.

Province and Year	Milk and Cream Consumed in Pints of Milk			Daily Consumption Per Capita in Pints <sup>1</sup>		
	Total	Milk Producers	Non- Producers	Total	Milk Producers	Non- Producers
	pt.	pt.	pt.	pt.	pt.	pt.

<sup>1</sup> Includes condensed coffee, malted milk and cream powder; items that do not appear separately in this table.

<sup>2</sup> Includes four items not separately listed, namely, condensed buttermilk, powdered buttermilk, sugar of milk and casein.

<sup>3</sup> Ice cream in terms of milk is included in the total for all products.

## Subsection 5.—Horticulture

Annual statistics of commercial horticulture are confined to production and value of fruits, flowers and nursery stocks. Although no estimates of the annual production of vegetables are as yet available, an attempt is now being made to collect this information for the major crops. Details of area, production and value of all the common vegetables grown in 1940 and the area under cultivation in 1941 will be found in a series of bulletins issued by the Census Branch. The processing of fruits and vegetables is closely allied with production and the total value of Canadian produce used by the fruit and vegetable preparations and wine industries amounted to \$8,955,000 in 1940 and \$13,051,000 in 1941.

**Fruit Production.**—Apples are still the most important fruit crop, in point of value, grown in Canada and the value of commercial production averaged approximately \$11,000,000 for the years 1935 to 1939. Other fruits for which estimates of commercial production are available are pears, peaches, plums, cherries, apricots and grapes, together with various berries of which strawberries are the most important. Substantial revenue is also derived from native blueberries and cranberries, the former being abundant over large areas of Eastern Canada, while the

cranberry is found chiefly in the Maritime Provinces. Commercial fruit growing is centred mainly in the Provinces of Nova Scotia, Ontario and British Columbia, although smaller areas, which are rapidly becoming important, are located in New Brunswick and Quebec. For a fuller discussion of fruit growing in Canada the reader is referred to pp. 242-247 of the 1931 edition of the Year Book.

### 25.—Estimated Commercial Production and Shipping-Point Value of Fruits in Canada, 1940-42, with Five-Year Averages, 1935-39

<sup>1</sup> Subject to revision.

Statistics of the total value of commercial fruit production are given below. The 1942 figures indicate an increase of 34.7 p.c. in value as compared with 1941.

### 26.—Total Value of Commercial Fruit Production in Canada, by Provinces, 1926-42

NOTE.—The figures in this table have been revised since the publication of the 1942 Year Book.

Year	Nova Scotia	New Brunswick	Quebec	Ontario	British Columbia	Total
	\$	\$	\$	\$	\$	\$
1926	2,397,000	194,000	756,000	4,255,000	7,292,000	14,894,000
1927	2,900,000	234,000	728,000	6,421,000	7,013,000	17,296,000
1928	3,244,000	167,000	849,000	7,523,000	7,895,000	19,678,000
1929	3,007,000	185,000	1,114,000	8,541,000	6,687,000	19,534,000
1930	3,121,000	175,000	1,136,000	6,477,000	7,531,000	18,440,000
1931	3,139,000	206,000	1,053,000	5,971,000	4,757,000	15,126,000
1932	2,310,000	165,000	1,198,000	4,098,000	5,076,000	12,847,000
1933	4,262,000	200,000	1,420,000	5,622,000	5,851,000	17,355,000
1934	3,788,000	159,000	1,247,000	5,242,000	6,608,000	17,044,000
1935	4,419,000	214,000	1,710,000	5,817,000	6,494,000	18,654,000
1936	2,969,000	196,000	1,354,000	5,190,000	5,910,000	15,619,000
1937	3,572,000	260,000	1,669,000	5,383,000	7,469,000	18,353,000
1938	5,400,000	269,000	1,358,000	5,550,000	7,356,000	19,933,000
1939	2,701,000	298,000	1,458,000	5,492,000	7,891,000	17,840,000
1940	2,285,000	257,000	1,574,000	5,722,000	7,140,000	16,978,000
1941	2,899,000	374,000	1,530,000	7,650,000	8,114,000	20,537,000
1942	3,438,000	404,000	2,183,000	9,703,000	11,928,000	27,656,000

**The Fruit Nursery Industry.**—The first commercial nursery in Canada was established near Fonthill, Ont., and this district still continues to be one of the leading centres of the industry. While the Province of Ontario accounts for the major part of the fruit stock output, there are nurseries distributed through all the provinces. The wholesale value of the product sold during the year ended May 31, 1942, showed an increase of 11·8 p.c. as compared with the previous year.

**27.—Numbers and Wholesale Values of Fruit Trees, Bushes and Plants Sold by Nurserymen in Canada, Years Ended May 31, 1939-42**

**Vegetable Production.**—Satisfactory annual statistics of the commercial vegetable-growing industry are not at present available, but important information on the subject is to be obtained through the decennial census. Figures for the Censuses of 1911, 1921 and 1931 will be found at pp. 254-255 of the 1936 Year Book.

**Floriculture.**—For the five years prior to 1940 statistics of sales of floricultural and ornamental nursery stocks were somewhat incomparable, owing to the fact that the list of firms included in the survey was extended during the period. This qualification also applies to the 1941 and 1942 figures, although in lesser degree.

**28.—Quantities and Wholesale Values of Floricultural and Ornamental Nursery Stock Grown in Canada and Sold, Years Ended May 31, 1941 and 1942**

**Subsection 6.—Special Agricultural Crops**

**Maple Syrup and Sugar.**—The Canada Year Book, 1924, contains at pp. 247-248 a description of the process of making maple sugar.

Table 29 shows that there was a considerable decline in the production of maple syrup and maple sugar in the four producing provinces of Canada in 1943. The 1943 crop is estimated at 2,058,200 gal. of syrup and 2,416,000 lb. of sugar, a total of 2,299,700 gal. expressed as maple syrup. This falls short of the 1942 crop of 3,250,600 gal. by 950,900 gal., or 29 p.c. The 1943 crop moved very rapidly at higher prices than in the previous year, the bulk of the values being made direct to the consumer. The total value of the crop was estimated at \$5,750,300, a decrease of 14.4 p.c. compared with the 1942 crop which was valued at \$6,716,300.

**Sugar Beets and Beetroot Sugar.**—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time three companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg, Ont., the Canadian Sugar Factories, Ltd., with plants at Raymond and Picture Butte, Alta., and the Manitoba Sugar Company, Ltd., at Fort Garry (Winnipeg), Man.

### 30.—Acreages, Yields and Values of Sugar Beets Grown in Canada and Quantities of Refined Beetroot Sugar Produced, 1937-42

NOTE.—For the years 1911-20, see the 1932 Year Book, p. 1057; for 1921-30, see the 1933 Year Book, p. 257; and for 1931-36, see the 1942 Year Book, p. 222.

**Tobacco.**—The total commercial production of Canadian raw leaf tobacco in 1942 was 89,699,400 lb., a decrease of 4,483,100 lb. or 4.8 p.c. from the 94,182,500 lb. produced in 1941. The decrease was largely in the Ontario flue-cured crop of 67,483,500 lb., which represents 75 p.c. of the entire Canadian crop. The total area planted in 1942 was 78,730 acres as compared with 70,560 acres planted in 1941.

The gross farm value of the 1942 crop was estimated at \$21,539,100 as compared with \$19,337,500 paid for the 1941 crop, an increase of \$2,201,600 or 11.4 p.c. Practically the entire crop was sold at prices averaging 3.5 cents per lb. higher than the prices paid for the crop of the previous year.

### 31.—Acreages, Production and Values of the Commercial Crop of Leaf Tobacco in Canada, 1937-43

NOTE.—Figures for representative years 1900-28 are given at p. 228 of the 1939 Year Book, and for the years 1929 to 1936 at p. 225 of the 1940 Year Book.

<sup>1</sup> Revised since the publication of the 1942 Year Book.

<sup>2</sup> Subject to revision.

**Fibre Flax.**—Table 34 shows that under the stimulus of the war-time demand for oil-producing crops, the area devoted to this crop increased from 10,536 acres in 1939 to 47,070 acres in 1942. Through action of the Agricultural Supplies Board the entire industry is on a mechanized basis and mill-processing machinery as well as mechanical pullers and lifters for field work are now manufactured in Canada. Products from Canadian mills are finding a ready market in Great Britain and the United States. The need for fibre and tow in Great Britain is urgent in view of the fact that the War has closed several sources of this valuable raw material. At the request of the British Ministry of Supply, a Canadian goal of 75,000 acres was set for 1943, but weather conditions at seeding time were so unfavourable that the acreage planted in the spring of 1943 was lower than in the previous year.

### 34.—Acreages, Yields and Values of Flaxseed, Fibre and Tow in Canada, 1937-43

NOTE.—Figures for the years 1915-30 will be found at p. 234 of the 1934-35 Year Book, and for 1931-36 at p. 224 of the 1942 edition.

<sup>1</sup> Including turbine tow. <sup>2</sup> Subject to revision.

<sup>3</sup> Includes estimated production from 8,040 acres carried over from previous processing year.

**Apiculture.**—The 1942 Canadian honey crop totalled 24,086,100 lb. as compared with 27,487,700 lb. in 1941, a decrease of 12.4 p.c. Although numbers of beekeepers and colonies were the highest on record, average yields were disappointingly low, the average for the Dominion being only 56 lb. per hive. Sharp declines in production from the previous year were recorded in three of the main producing provinces, the decreases amounting to 35 p.c. in Ontario, 37 p.c. in Manitoba and 20 p.c. in Alberta. These declines were only partially offset by larger crops in the other provinces.

The quantity of beeswax produced in 1942 is estimated at 361,300 lb. as compared with 412,300 lb. produced in 1941.

In spite of a smaller volume of production, however, the 1942 crop of honey and wax was valued at \$3,505,000, which was \$190,200 or 5.4 p.c. higher than the value of the 1941 crop. Practically the entire crop has been marketed at an average return to the producers of 13.9 cents per lb. This is 2.4 cents per lb. higher than the average price paid for the 1941 crop.

Beeswax prices were also higher, averaging 45.6 cents per lb. as compared with 39.1 cents paid in the previous year.

*Seasonal Conditions and Quality of the 1942 Crop.*—Cool, wet weather during the gathering season curtailed production generally in the main producing areas in Quebec, Ontario, Manitoba, Alberta and the lower mainland and coast district of British Columbia. On the other hand, in the interior of British Columbia weather conditions were extremely favourable and the 1942 crop was the best in many years. Limited rainfall in Saskatchewan resulted in an exceptionally heavy-bodied crop of high quality honey. Alberta honey, too, is described as generally light in colour, mild in flavour and low in moisture content. The Manitoba crop was of fair-to-good quality, but Ontario honey was of only fair flavour and rather high in moisture content. Excellent quality honey was produced in British Columbia and the Maritime Provinces.

### 35.—Beekeepers and Colonies, Production of Honey and Values of Honey and Beeswax in Canada, 1937-42

NOTE.—Statistics by provinces are shown in the "Quarterly Bulletin of Agricultural Statistics". Dominion totals for 1924-36 are given at p. 227 of the 1940 Year Book.

**Index Numbers of Agricultural Prices.**—Index numbers of prices of field crops, based on the five-year pre-war average (1935-39) prices, are shown for the years 1935-36 to 1942-43 in Table 39. The series relates to average prices received by farmers during the crop-marketing season Aug. 1 to July 31 of the following year.

In addition to the price indexes shown here, index numbers of the yields of the various crops have also been calculated. The combined data on prices and production have also been used to calculate a series of weighted index numbers of the values of the individual crops, and of all field crops. Index numbers of prices, yields and values in detail by provinces will be found in the "Quarterly Bulletin of Agricultural Statistics", January-March, 1944.

### 39.—Index Numbers of Farm Prices<sup>1</sup> of Field Crops, for Canada, Crop Years Ended July 31, 1935-43

NOTE.—For the formulae used in the calculation and for index numbers by provinces, see "Quarterly Bulletin of Agricultural Statistics", January-March, 1942. Indexes for the years 1931-32 to 1939-40 based on average prices, 1926-27, are given at p. 230 of the 1940 Year Book. Indexes on the present base, for the years 1909-10 to 1934-35, are given at pp. 180-181 of the 1941 Year Book.

<sup>2</sup> Subject to revision.

### Subsection 8.—Agricultural Statistics of the Census

Final figures of such agricultural statistics as are published from the decennial census are not yet available for 1941. A review of the 1931 Census data including: tenure of farms; farm values; mortgage indebtedness; farm expenditures; farm population; farm workers and cost of labour; farm machinery and facilities will be found at pp. 295-301 of the 1934-35 edition of the Year Book.

In the 1937 Year Book certain statistics were given at pp. 270-273 for the Prairie Provinces—summarized from the 1936 Quinquennial Census. Later tables from the same Census appear in the 1939 and 1940 Year Books.

### Subsection 9.—Agricultural Irrigation

**Alberta.**—The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial,

irrigation, water power and other purposes, and the granting of licences for such purposes, are dealt with by that Office. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (c. 98, R.S.A. 1942) provides for the formation of irrigation districts, and authorizes the raising of loans under by-laws adopted by voters of the district.

In 1942 the area to which water could be delivered by the works of the 13 major projects was reported as 525,000 acres and the area irrigated as 340,000 acres. In addition 616 private schemes have an irrigable area of 70,500 acres. A table at p. 182 of the 1941 Year Book gives statistics for each of the major projects for 1938 and 1939. Further details may be obtained on application to the Director of Water Resources, Edmonton.

**British Columbia.**—The surface waters of British Columbia are vested in the Crown in the right of the Province and are administered by the Water Rights Branch of the Department of Lands under the Water Act, the Drainage Dyking and Development Act and the Ditches and Watercourses Act.

The administration of the Acts is vested in the Comptroller of Water Rights.

Irrigation projects in British Columbia are on a smaller scale than those of Alberta. In 1941, an irrigable area of 68,469 acres and 44,560 acres under irrigation were reported for 57 projects. A table at p. 236 of the 1940 Year Book gives particulars of each project and later information may be obtained on application to the Comptroller of Water Rights, Department of Lands, Victoria.

#### **Subsection 10.—International Agricultural Statistics**

Owing to the unavailability of the compilations of the International Institute of Agriculture at Rome, the statistics of world production of cereals and potatoes, trade in wheat and flour and numbers of live stock in principal countries, which formerly appeared under this heading, cannot be brought up to date.

Subsection 3. Scientific Forestry.....	253		

The forests of Canada cover a vast region in the north temperate climatic zone, reaching from the Atlantic Ocean to the Pacific; they extend northward from the International Boundary to beyond the Arctic Circle. Wide variations in climatic, physiographic and soil conditions cause marked differences in the character of the forests in different parts of the country, hence more or less well-defined forest regions may be recognized. The principal regions are: Acadian, Great Lakes-St. Lawrence, Deciduous, Boreal, Sub-Alpine, Columbia, Montane and Coast.

### Section 1.—Forest Regions

At pp. 184-188 of the 1941 edition of the Year Book the forest regions of Canada are separately described, together with the dominant and associated tree species common to each.

### Section 2.—Important Tree Species

In Canada there are over 130 distinct species of trees. Only 33 of these are conifers or softwoods, but they comprise three-quarters of the standing timber and supply nearly 80 p.c. of the wood used for all purposes. Of the deciduous-leaved or hardwood species, only about a dozen are of commercial importance as compared with twice that number of conifers.

A short description of the individual tree species is given at pp. 247-249 of the Canada Year Book, 1940. More detailed information on this subject is given at pp. 283-286 of the 1936 edition of the Year Book and in the Dominion Forest Service Bulletin No. 61, "Native Trees of Canada", published by the Department of Mines and Resources, Ottawa.

### Section 3.—Forest Resources

The forested area of Canada is 1,220,405 sq. miles, constituting 35 p.c. of the total land area. In comparison, only 16 p.c. of the land area is considered to be of present or potential value for agriculture, and only 7 p.c. is now classed as "improved and pasture". The forested area within the boundaries of the nine provinces totals 1,160,405 sq. miles, or 58 p.c. of the provincial land area. About 450,000 sq. miles of the existing forests are classed as "unproductive". They are made up of small trees which cannot be expected to reach merchantable size because they are growing

\* Material in this chapter has been revised by R. G. Lewis, B.Sc. F., Chief of the Forestry Branch of the Dominion Bureau of Statistics, in co-operation with the Dominion Forest Service of the Department of Mines and Resources. Section 7.—The Influence of the War on the Pulp and Paper Industry—has been prepared by the Economic Branch, Research Division, Wartime Prices and Trade Board. The Forestry Branch of the Bureau of Statistics collects and compiles statistics relating to forest production. For detailed list of publications of the Forestry Branch, see Chapter XXX.

on poorly-drained lands, or at high altitudes, or are subject to other adverse site conditions. These unproductive forests, however, perform valuable functions. They help to protect watersheds and conserve water supplies; they provide fuel and building materials to natives and travellers in remote areas; and they are the habitat of valuable fur-bearing and game animals.

The productive forests covering more than 770,000 sq. miles are considered to be capable of producing continuous crops of timber suitable for domestic and industrial purposes. A considerable proportion of these forests is not yet accessible to commercial operations, but constitutes a valuable reserve for the future. About 430,000 sq. miles of productive forests are considered to be economically accessible at the present time. One-half of the productive forest area bears trees large enough for use as sawlogs, pulpwood or fuelwood, and the other half is occupied by young growth of various ages, kinds and degrees of stocking.

The total stand of timber of merchantable size is estimated to be 313,000 million cu. ft., of which 212,000 million cu. ft. is accessible. Expressed in commercial terms, the accessible timber is made up of 252,000 million bd. ft. of logs in trees large enough to produce sawlogs and 1,500 million cords of smaller material suitable for pulpwood, fuel, posts, mining timber, etc.

Forest inventory surveys are conducted by the Dominion and provincial authorities. Inventories for Manitoba and New Brunswick have been completed by the Dominion Forest Service and that of Nova Scotia is now in progress. Publications describing the forest resources of Ontario and British Columbia have been issued by the forest authorities of those provinces.

<sup>1</sup> Estimates of softwoods too small for sawlogs, and of hardwoods of all sizes, are not available for British Columbia.

## Section 4.—Forest Depletion and Increment

**Depletion.**—The average annual rate of depletion of reserves of merchantable timber during the ten years 1932-41 was 3,825 million cu. ft. Of this total, 69 p.c. was felled for domestic and commercial use, and 31 p.c. was destroyed by fire and pests. Of 2,653 million cu. ft. utilized, 33 p.c. was used in sawlogs, 32 p.c. for fuel, 30 p.c. for pulpwood, and 5 p.c. in miscellaneous products. Between 75 and 80 p.c. of the total cut was of softwood species. Losses by fire averaged 472 million cu. ft. annually, and insects and tree diseases destroyed about 700 million cu. ft.

During 1941, the last year of the period under review, depletion totalled 5,099 million cu. ft. and was very much greater than the average for the decade, due, in part, to increased utilization to meet war needs (3,354 million cu. ft.) and in part to abnormally severe fire losses (1,045 million cu. ft.).

**Forest Fires.**—Considering Canada as a whole, the fire season of 1942 was favourable and the losses were below the average for the previous decade. However in British Columbia, Saskatchewan and Nova Scotia the losses were considerably above the average.

Summary statistics of fire losses are given in Tables 2 and 3, while fuller details by regions are given in the Annual Report of the Department of Mines and Resources for the fiscal year ended Mar. 31, 1943.

<b>Totals.....</b>	<b>5,985</b>	<b>100</b>	<b>4,791</b>	<b>100</b>

**Increment.**—From a long-term point of view it is believed that total depletion of our forests can be replaced by an average growth rate over the productive forest area of between 8 and 9 cu. ft. per acre annually. This very low rate is almost certainly being maintained or exceeded. But practically all of the depletion is in fact concentrated on the 430,000 sq. miles of productive forest which is classed as accessible, and replacement of normal depletion by this area alone requires an average growth rate of more than 14 cu. ft. In 1941 the depletion rate was 18½ cu. ft. per acre. Complete estimates of the rates at which the forests of Canada grow are not yet available. The vast size of the country, the diversity of growing conditions, and the complex character of the forests themselves, place great difficulties in the way of estimating growth. Numerous studies have been made by the Dominion Forest Service which indicate, beyond reasonable doubt, that over considerable tracts annual growth exceeds 25, 30 or even 40 cu. ft. per annum; but there are other areas classed as productive on which the growth is much less.

Natural reproduction of forest tree species in Canada is fortunately prolific, except in a few localities. After an area has been cut over or burned, young growth usually appears within a short time. Thus the re-establishment of some sort of forest growth is a less difficult problem than it is in many other countries. There is, however, no guarantee that the species reproduced will be of the kinds desired by industry. Most of the wood used in Canada is softwood and in general, softwood reproduction is fairly good; but there are considerable areas in which a combination of overcutting and repeated fires have resulted, not in the permanent destruction of the forest, but in the replacement of valuable stands by new ones of inferior quality.

There is no room for doubt that the introduction of better methods of forest management, including the provision of more adequate forest protection, can make the forests of Canada more productive than they have ever been. It is true that stocks of very large trees, whose growth required upwards of 300 years, are disappearing and will not be replaced; but, though the forest industries of the future must use smaller logs than did those of the past, good forest management can make possible a considerable expansion of those industries as and when market conditions warrant.

The potential capacity of many forest soils to produce more usable wood in a given period than they have ever done in the past is already being demonstrated on such areas as the Dominion Forest Experiment Station at Petawawa, and on some of the better-managed farm woodlots.

## **Section 5.—Forest Administration**

### **Subsection 1.—Administration of Dominion and Provincial Timber-Lands**

Although the forest resources are, generally speaking, under the control of the provinces, forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon are administered by the Dominion Government.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber-land outright. Under this system the State retains ownership of the land and control of the cutting operations. Revenue is received in the form of stumpage bonuses (either in lump sums or in payments made as the timber is cut); annual ground-rent and Crown dues are collected as and when the wood is removed. Both ground-rent and Crown dues may be adjusted at the discretion of the governments.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 87 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick over 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately owned forest land in the other provinces, exclusive of National Parks and Indian reserves, is as follows: Quebec, 7.3 p.c.; Ontario, 6.6 p.c.; Manitoba, 9.1 p.c.; Saskatchewan, 13.6 p.c.; Alberta, 7.7 p.c. and British Columbia, 3.4 p.c.

<sup>1</sup> Under National Park reservation and therefore not included in total. <sup>2</sup> In addition, 537.21 sq. miles of Provincial Forest Reserves in Saskatchewan are administered under provincial park regulations.

**Forest Lands under Dominion Control.**—The forests under Dominion control are administered by the Department of Mines and Resources. The National Parks Bureau has charge of the National Parks, the Lands Registry Office administers the timber in Yukon and the Northwest Territories, and the Indian Affairs Branch administers, in trust for the Indians, the timber within their reservations. The Dominion Forest Service has charge of the Forest Experiment Stations.

**Forest Lands Under Provincial Control.**—With the exception of relatively small areas owned by the Dominion Government, the Crown lands and the timber on them are administered by the provinces in which they lie. As new regions are explored, their lands are examined and the agricultural land disposed of. Land suitable only for forest is set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province of Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis. Information regarding forest administration in the individual provinces is given at pp. 234-236 of the 1942 Year Book.

#### Subsection 2.—Forest Fire Protection

The Dominion Government administers the forests of the National Parks, Forest Experiment Stations and the Northwest Territories and Yukon and is, therefore, responsible for fire-protection measures therein. Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire-protection

organization co-operating with owners and licensees for the protection of all timbered areas, the cost being distributed or covered by special taxes on timberlands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for close seasons during dangerous periods. An interesting development in this connection in the Province of Quebec is the organization of a number of co-operative protective associations among lessees of timber-limits. These associations have their own staffs, which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest-fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners and co-operate with the railway fire-ranging staffs which the railway companies are required to employ under the Dominion Railway Act.

In certain districts in Canada aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous, flying boats can be used for detection, and for the transportation of fire fighters and their equipment to fires in remote areas. Specially constructed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected.

In the more settled areas with better transportation facilities, fire detection is carried out by means of lookout towers fitted with telephone or radio for reporting fires. Field staff and equipment are maintained at strategic points ready to deal with fires when they are reported. These staffs, when not engaged on actual fires, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other necessary improvements in the interest of fire protection.

Portable gasoline pumps, which weigh from 45 to a little over 100 lb. each, and linen hose are important equipment. These pumps can be carried to a fire by canoe, motor-boat, automobile, aircraft, pack-saddle or back-pack and can provide hose pressures up to 200 lb. per square inch, depending upon the elevation above and distance from the water supply. Hose lines over a mile in length are frequently used. Small hand-pumps supplied by 5-gallon portable containers are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of close seasons for brush-burning, and seasons during which permits are required for setting out fires and for travel in the forests during dangerous dry periods, have been of enormous value as preventive measures.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another important advance in forest protection is the development by the Dominion Forest Service of methods for the daily measurement of the actual degree of forest-fire hazard. In the forest types and regions in which the necessary research has been completed the forest authorities are able, not only to gauge the trend of increasing hazard at any given time but, by the aid of weather forecasts, to anticipate the trend one or two days in advance and so regulate their activities to meet hazardous conditions as they develop.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor-trucks provided with motion-picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools, by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of the forests, the devastation caused by fire and the means of preventing such destruction.

### Subsection 3.—Scientific Forestry

The great forestry problem is the management of Crown forests, first under provisional and later under more intensive working plans, so as to ensure a sustained yield. Forest research activities in this direction are now assuming great importance. The Dominion Forest Service operates 5 forest experiment stations with a total area of 277 sq. miles. Here investigations of the underlying principles governing the growth of forests are made and practical methods of management are tested.

About 400 technically trained foresters are employed by the Dominion or provincial forest services or by paper and lumber companies. A considerable number of foresters are actively engaged in commercial logging operations. In addition to administrative work, these men carry on forest surveys either for the estimation of timber-stands and making of maps, or to determine natural growth and reproduction conditions and factors. An outstanding development of recent years has been the extensive use of aerial photography for forest surveys. With the co-operation of the Royal Canadian Air Force and the Hydrographic and Map Service, the Dominion Forest Service has taken a leading part in the development of means for the interpretation of the photographs for forestry purposes. Most of the provincial forest services and many of the timber-owning companies also make extensive use of aerial photographs. It is now possible not only to map the areas covered by the various forest types but to estimate the volume of standing timber with an accuracy that compares favourably with ground surveys. Over 950,000 sq. miles have now been photographed in Canada and of this area forest maps have been prepared for 116,500 sq. miles.

*Research Work in Forestry.*—In a special article on Scientific and Industrial Research in Canada, which appears at pp. 979-1012 of the 1940 Year Book, a comprehensive review of all phases of scientific research work being undertaken by the various Government Departments is given. Specifically at pp. 993-995 research in forest economics, silviculture, forest-fire protection and forest products appears.

## Section 6.—Forest Utilization

### Subsection 1.—Woods Operations

A short review of the differences in logging methods throughout Canada is given at pp. 195-196 of the 1941 Year Book.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, that go to swell the total.

A serious situation arose in the summer of 1942 and it became apparent that the country was threatened with a serious shortage of wood fuel. Normal consumption of this commodity has been 9,000,000 cords annually; this is produced by many thousands of individual farmers and the situation was due to shortages of farm labour combined with the abnormal demands made upon agriculture. A Deputy Administrator of Wood Fuel was appointed under the Coal Controller of the Wartime Prices and Trade Board in July, 1942, and a survey of the situation was undertaken. Ceiling prices were established and efforts were made to ensure at least a normal supply for all concerned. In 1943 this activity was transferred to the Department of Munitions and Supply and placed under the direction of a Wood Fuel Controller.

### 5.—Values of Woods Operations, by Products, 1937-41

Product	1937	1938	1939	1940	1941
	\$	\$	\$	\$	\$
Logs and bolts.....	58,004,070	52,759,660	55,685,197	71,817,471	86,514,625

### Subsection 2.—The Pulp and Paper Industry

The rapid development of this industry in Canada is briefly traced at p. 198 of the 1940 Year Book. Summary statistics for the combined pulp and paper industry are given at pp. 260-261 of this volume.

There are three classes of mills in the industry. These, in 1942, numbered 28 mills making pulp only, 50 combined pulp and paper mills and 27 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. In all provinces except Nova Scotia, pulpwood cut from Crown lands must be manufactured into pulp in Canadian mills unless a special permit to export is obtained. A large proportion of the pulpwood cut in Canada for export to the United States is taken from private lands. In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form, but the proportion has now declined to about one-fifth.

### 8.—Production, Consumption, Exports and Imports of Pulpwood, 1930-42

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books. Figures of imports and exports are shown on a rough or unpeeled basis, and are not comparable with those shown in Tables 16 and 17 of the External Trade Chapter.

BY PROVINCES, 1931-41

AVERAGE ANNUAL VALUE OF LUMBER PRODUCTION  
BY PROVINCES, 1931-41

usually manufacture a surplus of pulp for sale in Canada or for export. Spruce supplemented by balsam fir in the east and by hemlock in the west is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. ft. of solid wood, and one cord of peeled pulpwood 95 cu. ft.

In Canada, four methods of preparing wood-pulp are used, one of which is mechanical and three chemical. Detailed descriptions of these processes are given in the 1931 Year Book, pp. 290-291.

**Pulp Production.**—Growth was steady up to 1920, when 1,960,102 tons of pulp were produced. With the exception of 1921 and 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932 and increases up to 1937. There were decreases in 1938 and 1942, but the production in 1941 established a record of 5,720,847 tons.

### 9.—Pulp Production, Mechanical and Chemical, 1931-42

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books.

Year	Mechanical Pulp <sup>1</sup>		Chemical Fibre <sup>1</sup>		Total Production <sup>2</sup>

1942.....	3,308,118	65,208,919	2,298,343	126,936,143	5,606,461	192,145,062

<sup>1</sup> Includes screenings.      <sup>2</sup> Some of these totals include unspecified pulp.

<sup>3</sup> Revised since the publication of the 1942 Year Book.

During 1942, the 78 establishments manufacturing pulp (28 mills manufacturing pulp only and 50 combined pulp and paper mills) turned out 5,606,461 tons of pulp, valued at \$192,145,062, as compared with 5,720,847 tons of pulp, valued at \$175,439,551 in 1941. Of the 1942 total for pulp, 3,847,244 tons, valued at \$86,998,248, were made in the combined pulp and paper mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 58 p.c. of the production in 1942 was groundwood pulp and over 20 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate, soda fibre and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the 5,606,461 tons of pulp produced in 1942 entailed the use of 7,667,438 cords of rough pulpwood valued at \$83,318,870, and the total value of materials used in the manufacture of pulp was \$101,015,802.

<sup>1</sup> Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia.

**Pulp Exportation.**—A table at p. 201 of the 1941 Year Book gives the exports of wood-pulp from the principal producing countries for 1913, 1938 and 1939. The latter figures are incomplete, owing to exigencies of war, and consequently the table has not been continued. Total exports of wood-pulp from Canada in the years 1941 and 1942 will be found in Table 17 of the Chapter on External Trade.

**Paper Production.**—During 1942, the 77 establishments manufacturing paper (50 combined pulp and paper mills and 27 mills making paper only) produced 4,241,767 tons of paper and paper board with a total value of \$230,962,719, as compared to 4,524,776 tons, valued at \$241,450,292 in 1941. Newsprint paper now forms 76.8 p.c. of the annual paper production in Canada. In 1942 both the production and the value decreased by 7.5 p.c. from 1941. The remainder of the production was divided as follows: 14.6 p.c. paper boards, 3.9 p.c. wrapping paper, 2.9 p.c. book and writing paper and about 1.8 p.c. tissue and miscellaneous papers.

<b>Totals.....</b>	<b>4,524,776</b>	<b>241,450,292</b>	<b>4,241,767</b>	<b>230,962,719</b>

Quebec produced 51.6 p.c. of the total quantity in 1942, Ontario 31.0 p.c., British Columbia 7.4 p.c. and Nova Scotia, New Brunswick and Manitoba the remaining 10 p.c.

**World Production of Newsprint.**—The world production of newsprint in 1939 has been estimated at 7,679,000 short tons, of which North America supplied 54 p.c. and Canada alone 38 p.c. Owing to the War, statistics for later years are not available; a table at p. 203 of the 1941 Year Book gives figures of production in leading countries in 1938 and 1939, together with the average production in each country over the period 1928-39.

**Exportation of Newsprint Paper.**—In the fiscal year 1908, exports of printing paper were recorded separately for the first time, and were valued at \$2,833,535. This was largely newsprint paper. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 tons of newsprint valued at \$9,980,378; for the calendar year 1942, exports amounted to 3,005,291 tons valued at \$141,065,618 and ranked third among the exports of the Dominion.

Since 1913 Canada has led the world in the exportation of newsprint. In 1938 the quantity of newsprint exported by the eleven principal newsprint-producing countries was 3,806,737 short tons, of which Canada contributed 63.7 p.c. and the other ten countries 36.3 p.c. World comparisons for later years are not available.

**Statistics of the Combined Pulp and Paper Industries.\***—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into towels, stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are now attributed to the particular industrial group of converting plants to which they properly belong. The figures for 1937 and subsequent years, therefore, exclude all information pertaining to paper converting, which tends to lower perceptibly all the principal statistics of the pulp and paper industry and to render these figures not strictly comparable with those of previous years. Including manufacturing operations as far as the basic paper-making stage, there were altogether 105 mills in operation in 1942. The capital invested amounted to \$655,598,196, the employees numbered 38,007 and their salaries and wages amounted to \$69,656,393. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total of materials and supplies used in the industry as a whole can be considered as amounting to \$135,970,437 in 1942, \$125,437,012 in 1941 and \$108,758,862 in 1940; the gross value of production as \$337,390,484 in 1942, \$334,726,175† in 1941 and \$298,034,843 in 1940; and net‡ value of production, \$165,193,627 in 1942, \$174,852,041† in 1941 and \$158,230,575 in 1940.

The pulp and paper industry, one of the leading single manufacturing industries in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It was the leading industry in gross value of production from 1925, when it replaced the flour-mills, until 1935, when it was overtaken by non-ferrous smelting and refining. It has been first in net value of production and capital for some years. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries.

\* See Chapter XIV—Manufactures—and the Index for further particulars regarding the pulp and paper and paper-converting industries.

† This figure does not agree with that given in the chapter on Manufactures owing to corrections subsequently made.

‡ Gross value of production, less cost of power, fuel and consumable supplies as well as cost of materials.

If the \$20,314,253 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry towards Canada's excess of exports over imports in 1942 amounted to \$246,707,373, representing the difference between exports and imports of pulpwood, pulp, paper and paper products.

The United States market absorbs, annually, practically all of Canada's pulpwood exports, over 80 p.c. of her pulp and about three-quarters of her paper shipments. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

### Subsection 3.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood that reported in 1942 was 5,277, as compared with 4,655 in 1941. The capital invested in these mills in 1942 was \$112,119,272, employment amounted to 47,765 man-years and wages and salaries amounted to \$49,562,069. The logs, bolts and other materials and supplies of the industry were valued at \$98,774,251 and the gross value of production was \$192,919,077. The net production in 1942 was \$91,206,949.

Lumber production in Canada reached its maximum quantity in 1911 with almost 5,000 million ft. b.m. The maximum value was reached in 1920. Average values were fairly uniform up to 1916, but increased rapidly from 1917 to 1920, only to decline gradually during the following years to the lowest level for the entire period, which was reached in 1933. Increases took place each year from 1934 to 1937, but there was a decrease in 1938, followed by increases in 1939, 1940, 1941 and 1942.

### 13.—Quantities and Values of Lumber and All Sawmill Products Made in Canada, by Provinces, 1941 and 1942

<sup>1</sup> Revised since the publication of the 1942 Year Book.

British Columbia came first in total production, contributing 46.7 p.c. of the total cut in lumber and 87.4 p.c. of the shingles in 1942. Quebec followed in second place, Ontario was third and New Brunswick fourth. Spruce is the most important kind of lumber sawn and is produced in every province. Douglas fir is sawn almost entirely in British Columbia and comes second, with hemlock, white pine, cedar and yellow birch next in order of importance. Cedar is the most important shingle-wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood, only 5 p.c. being deciduous-leaved trees or hardwoods.

**Lumber Exportation.**—The hewn square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to the United Kingdom and later to the United States. Trade with the latter country has been confined, from the first, largely to planks, boards and dimension stock. During the American Civil War exports of forest products of all kinds to the United States for the first time exceeded those to the United Kingdom, but in late years this has become the rule. The total quantity of sawn lumber and square timber exported changed little from 1900 to 1929, averaging about 2,000 million ft. b.m. per annum, but decreased considerably in the next three years, reaching its lowest level of 790,000 M ft. b.m. in 1932. Since that time lumber exports have recovered; in 1940 they were 2,548,681 M ft. b.m., in 1941 2,300,875 M ft. b.m. and in 1942 2,179,956 M ft. b.m.

## Subsection 4.—Manufactures of Wood and Paper

Sawmills and pulp and paper mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries that use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, some manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries that use wood indirectly in the manufacture of articles that do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors, other millwork and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1941, this group, comprising 9,420 establishments, gave 179,967 man-years of employment and paid out \$227,821,739 in salaries and wages. Capital invested in the industries of the group amounted to \$1,086,022,546; the gross value of its products was \$892,936,114 and the net value, \$463,967,834.

**Exports of Wood and Paper Products.**—The forests of Canada contribute substantially to her export-trade values. During the calendar year 1942 exports of wood and paper products amounted to \$389,805,396 and made up 16.5 p.c. of the total value of Canadian exports for the period, amounting to \$2,363,773,296. Domestic exports of wood and paper products were exceeded by those of agricultural (vegetable and animal) products, which made up 21.8 p.c. of the total, and by mineral products with 35.2 p.c. Wood and paper products are prominent among the individual items of export. Even more impressive is the contribution made by products of the forest and forest industries toward Canada's excess of exports over imports. In 1942 this excess from trade in all commodities (excluding gold) was \$741,224,113. In comparison, the gross total contribution from trade in "wood, wood products and paper" only, amounted to \$352,012,132.

### Section 7.—The Influence of the War on the Pulp and Paper Industry

The War has greatly increased the demand for pulp and paper products. Increased business activity and higher incomes have increased the demand for all kinds of paper. Fibreboard and paperboard containers have been substituted for those made of metal and wood, and many new types of packages are required for war supplies. Canadian newsprint is used by the Armed Forces of the Allies, in the liberated areas of Europe, and for Allied propaganda in the occupied countries. Paper boards are used in the construction of Army huts and other buildings, and pulp products have a variety of other military uses.

During the earlier years of the War, production of the industry's principal raw material, pulpwood, increased by leaps and bounds, and the manufacture of wood-pulps and papers increased accordingly. In 1941 both volume and value of production exceeded all previous levels. Notable developments during this period were the large increases in production and exports of all kinds of wood-pulps, and of paper boards and papers other than newsprint. The exceptional demand for pulps led to greatly increased production, and exports were twice as large in 1941 as in 1939.

The trends of production of wood-pulp and paper are shown in Tables 10 and 11 at pp. 258 and 259.

Up to the end of 1941 war conditions did not result in any major disturbance of normal operating and trade practices in the industry. In addition to its direct contribution to the war effort, the pulp and paper industry has secured for Canada most urgently needed supplies of foreign exchange, particularly United States dollars. This function was of exceptional importance prior to the entry of the United States into the War. Many thousands of tons of pulp and paper shipped across the southern border were exchanged for training aircraft, guns, tanks, and other war supplies which could not at that time be manufactured here.

A special contribution to the general war effort was made by the pulp and paper industry by the adoption of a program for the manufacture of "bits and pieces" in its extensive and well-equipped machine shops, and the diversified list of products made includes parts for naval and cargo vessels, aeroplanes and gun-mountings, as well as gauges and other special devices. During the first year, supplies produced were valued at more than \$1,250,000, and subsequent production has been much greater.

At the beginning of 1942 there were some doubts whether production of pulpwood could be maintained at the rate of the previous year, and meanwhile the outflow to the United States was greater than ever before. Production and distribution of pulpwood were, therefore, placed under direction of the Timber Controller and all exports to non-Empire countries were made subject to permit. Arrangements were made, however, whereby United States mills, which normally depended on Canadian wood, would receive enough pulpwood to meet their ordinary requirements. During the year all business in wood-pulp and papers was brought under the control of Administrators of the Wartime Prices and Trade Board. The first Newsprint Administrator was appointed in December, 1941.

Newsprint mills are very large consumers of power and Canada is outstanding among nations as a producer of hydro-electric power. Nevertheless, during the latter part of 1942, the needs of munitions industries and other direct war production were so great that restrictions had to be placed on the amount of current available to newsprint mills in parts of Ontario and Quebec. This inevitably resulted in reduction of the quantities of newsprint paper manufactured.

To meet this situation plans were made on a continental basis for curtailment of operations in the newsprint industry. In Canada a pooling scheme was planned whereby mills that had been compelled to surrender business through lack of power would be compensated from a fund to be built up from contributions by mills that were able to maintain or increase their output. This fund is administered by the Commodity Prices Stabilization Corporation of the Wartime Prices and Trade Board.

At the beginning of 1943 a quota arrangement covering 25 mills was put into effect. Nevertheless, the reduced rate of operation of the industry as a whole placed Canadian manufacturers in a very difficult position because there had been no increase in the standard price of newsprint (\$50 per ton at New York) since 1938 and during the intervening period costs of operation had risen steadily. A price increase of \$4 per ton was authorized in February, effective Mar. 1, 1943.

In the early summer of 1943 newly developed hydro-electric projects came into operation, substantially easing the power situation but no considerable increase in the output of paper then seemed possible because of shortage of labour and consequent shortage of pulpwood. The increasing difficulties of the newsprint industry were recognized by authorization of a further price increase of \$4 per ton effective Sept. 1, 1943. In the fall, however, the labour priority rating for pulpwood cutting was raised to "B" and National Selective Service, in co-operation with other Dominion, Provincial and Municipal authorities undertook an intensive publicity campaign and other measures to obtain more labour for work in the woods. In January, 1944, the supply of wood-pulp for newsprint was extended by the use of clay filler, waste paper, etc. At the end of 1943 the Wartime Prices and Trade Board introduced new restrictions on the manufacture and use of pulp products, and tightened those already in effect. Among these were the elimination of many non-essential products, maximum manufacturing specifications for others, quota rationing of newsprint and other products. As a result of these measures it was possible in December, 1943, to set production quotas for the first six months of 1944 higher than would have been considered possible a few months earlier. Newsprint production will be at a monthly rate of 252,000 tons of which 200,000 tons will be available for the United States, which is 9 p.c. more than in 1939. Exports of wood-pulp to the United States during the first half of 1944 will be at the rate of 1,100,000 tons per annum and, under an arrangement made by the Timber Controller and United States authorities, the United States will receive one-half of Canada's production of "purchased pulpwood".

## CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION

### CONSPECTUS

	PAGE		PAGE
SECTION 1. THE FUR TRADE.....	266	SECTION 2. FUR FARMING.....	269
SPECIAL ARTICLE: The Development of Marshlands in Relation to Fur Production and the Rehabilitation of Fur-Bearers.....	267	SECTION 3. TOTAL FUR PRODUCTION.....	271

### Section 1.—The Fur Trade

**Historical Sketch.**—The place held by the fur trade during the French regime in Canada, when for a century and a half it was both the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said to have held the West until the Dominion had grown to absorb it, bequeathing, to the civilization that followed, a native race accustomed to the White man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the Canada Year Book, 1934-35, pp. 343-344.

**Fur Resources.**—In the early years of the 19th century, the exports of furs from Canada exceeded in value those of any other product. The total output has not seriously declined and Canada may still be regarded as possessing, in her northern regions, one of the great fur preserves of the world. The rapid development of the country and the opening up of the West during the later 19th and earlier 20th centuries, together with improvements in transportation and settlement, meant the exhaustion of the fur resources of the settled parts. More recently the development of mining on a large scale over the Precambrian Shield has forced the trapper still farther north. Decline in fur resources has, however, been accompanied by increase in demand, the encouragement of fur farming, and the introduction of conservation measures. Nevertheless, the belt of northern Canada, which includes the whole of the Northwest Territories, the northern parts of the Prairie Provinces, and extends through northern Ontario and Quebec and into the Maritimes, remains one of the few natural reservoirs for fine furs. Minerals and furs will probably remain the chief resources of this vast area since much of it is unsuited to settlement or forest growth.

The fur bearers of Canada are mostly carnivorous animals but two very valuable rodents, the beaver and the muskrat, are included. The largest fur-bearing animal is the bear—polar, along the Arctic Coast and Hudson Bay; grizzly, in the Rocky Mountains; and black, common in wooded areas generally. Wolves—grey, black and blue colour varieties—are common and widespread. Fox pelts account for more than half of the fur trade. Fur farms now supply nearly all of the silver-fox pelts, while the Arctic regions provide a large number of white skins and a few blue ones. The ermine, or weasel, is fairly plentiful throughout the Dominion and is found as far north as trappers are operating. Otter, beaver, marten, fisher and mink are furs of exceptional quality and beauty and are secured throughout the whole of the timbered parts of the northern belt.

Among the rodents, the beaver has the most valuable fur, but this animal has begun to show signs of decreasing and restrictions on the taking of beaver have been made more rigid in consequence. Muskrat is quite highly prized and, under the trade name of "Hudson seal", its pelt has become a favourite moderate-priced fur.

**Conservation.**—At pp. 288-289 of the 1939 Year Book a short section appears dealing with conservation measures undertaken in regard to fur bearers.

## THE DEVELOPMENT OF MARSHLANDS IN RELATION TO FUR PRODUCTION AND THE REHABILITATION OF FUR-BEARERS\*

Canada's fur production has remained fairly constant during the past twenty years, a sufficiently long period to cover several so-called fur cycles. A comparison of the figures of total value of furs produced in Canada for the decades ended, respectively, 1930 and 1940, indicates a decline of approximately 18 p.c., or from a yearly average of \$15,904,000 to \$13,463,000. In the same comparison, the number of pelts marketed increased by approximately 36.4 p.c. This decrease in total value and increase in number of pelts was mainly accounted for by the increased sale in recent years of pelts of low price value, such as squirrel and rabbit. Fur is, therefore, a resource worth, let us say, \$15,000,000 a year to Canada and remains static, or nearly so, at that figure. This situation prevails in spite of the excellent progress made during the period by those actively engaged in the development of fur-bearers in captivity—the fur farmers—and had it not been for their contribution, the decline would be very marked. Taking into account the increased production of small pelts, the decline must have been even more pronounced in the fine furs that command high prices.

However, on the whole, this trend is not discouraging, nor should it be misunderstood. The influences at work against an increased production are recognized and some progress has been made toward the discovery of means of counteracting the tendency to decline. The first of such reconstructive measures was the development of the fur farm and the second and newer one was the development of fur rehabilitation programs where fur-bearers, particularly the two important rodents—the beaver and the muskrat—are actively assisted to increase their numbers in their natural habitat. A brief statistical and chronological history of the progress of this latter movement is the purpose of this article.

**Muskrat.**—Leaving out the work of the 'evangelists' who might have had in mind what ought to be done without formulating any remedial measures or charting practical courses of action, and leaving out the experiences of the early experimenters who tried and failed, the first sure step toward the goal was taken at The Pas, Man., in connection with rehabilitation of the muskrat. In 1932, 54,000 acres of land were leased from the Government of that Province by private interests with the object of increasing the muskrat population by the control of water levels on the marshes they once inhabited. The marshes were at that time in a state of virtual depletion. In 1931 only 125 rats had been trapped; in the spring of the fourth year 11,000 rats were taken and in the fifth year, 26,000. The area selected was not ideal but the thesis that muskrat population could be restored by water-control measures was amply proved. It is conservatively estimated that an increase in the muskrat population of from 300 in 1932 to 60,000 in 1937 took place, a result

\* Prepared under the direction of Dr. Charles Camsell, C.M.G., Deputy Minister, Department of Mines and Resources, by D. J. Allan, Superintendent, Reserves and Trusts Service of the Indian Affairs Branch.

more conclusive since it was accomplished during the five driest years Manitoba has ever experienced. This first rehabilitation project was and still is in private hands.

In 1934 the Government of Manitoba laid plans for the development, along similar lines, of an area of 135,000 acres now known as the Summerberry Game Preserve. During 1935 and 1936, with assistance from the Dominion Government amounting to \$90,000, the construction and engineering program was completed. This project was the first public development wholly sponsored by the two Governments and developed in the sole interest of the trappers. During its history, not one cent of profit has been charged to it, the whole surplus production going in the most direct manner possible to the trappers. Administration and maintenance costs have been fully met from production and the capital cost has been offset by the fact that 1,800 families previously on relief have been restored to a self-sustaining basis and assisted to a higher standard of living. At the termination of the fourth year, that is in April, 1940, a first crop of approximately 126,000 rats was taken and sold at a gross aggregate price of over \$160,000. In 1941, 191,562 rats were taken and sold for \$361,179. The total cost to the end of the second crop year was approximately \$135,000 whereas the total value of the crop harvested to the same date exceeded \$520,000. In 1941, 753 trappers participated in the rat harvest, earning more than \$300 apiece for less than a month's labour, which amount was paid under a contractual arrangement at a rate averaging \$25 a month over the twelve months. This project continues to prosper.

In 1938, the Two Island Project was launched in the same general area. This 160,000-acre tract of marshland was obtained under lease from Manitoba by the Dominion Government and was developed during the years 1938 to 1941 along similar lines to the Summerberry Project. The muskrat population increased from an estimated 650 at the commencement to 85,000 by the autumn of 1941. In March, 1942, under an arrangement adequately safeguarding the interests of the Indian trappers on whose behalf the development was undertaken, the project was turned over to the Province of Manitoba and consolidated with the adjacent Summerberry Project and intervening lands. A first crop to the value of approximately \$50,000 was taken from the Two Island area in 1942 and included in the returns from the consolidated projects.

Another Dominion Government scheme, known as the Sipanok Fur Development Project, was commenced in 1939 in the Province of Saskatchewan. While a little trapping has been permitted in this area from the beginning, the 1943 crop was the first substantial indication of the effect of planned management. In that year a crop was trapped and sold for over \$38,000 from an area that had never before produced a crop much in excess of 1,000 rats. This project already fully maintains an Indian population of 271, and is as yet only in its initial stages of development. It holds promise of producing about 200,000 rats per year on a sustained yield basis when the necessary construction program has been completed. This factual recital is sufficient to prove conclusively that it is possible to greatly increase the value of rat production by planned management.

**Beaver.**—The methods necessary to effect an increase in the production of beaver pelts have been the subject of painstaking study over the past twelve years by an official of the Hudson's Bay Company at the Ruperts House Post, and a plan of management has been evolved. The Company gave their official free rein and such financial assistance as was needed to develop an area of five or six million acres south of Ruperts River which had been secured for the purpose from the Province

of Quebec. By hard and patient effort the co-operation and support of the Indians who trapped over the land selected were enlisted. The plan was one of pure conservation. The area had reached a state of virtual depletion caused largely by the wrecking of aboriginal conservation practices by uncontrolled White infiltration into traditionally Indian trapping grounds, but an adequate seed stock of beaver remained together with sufficient food stocks and ample water. The area was closed to trapping until the stock it carried could be built up to a point where the annual increment would maintain the trapping population and leave something to spare. Existing beaver were to be the capital and the increase was to be regarded as the interest; the principle to be followed was that the capital must never be impaired if the business were to survive.

With the full support and assistance of the Company, the wholehearted loyalty of the Indians, the practical co-operation of the Province of Quebec and the sympathetic interest of the Indian Administration, the experiment proved successful. In 1930, the beaver on the area numbered a few hundred; to-day, by actual count, the beaver population approaches 10,000. In 1943, 2,000 pelts were harvested—a number substantially less than the estimated annual increase.

The progress of this project has been watched and studied for many years. In 1937, the Dominion Government secured its first beaver rehabilitation area on the Nottaway River, Que. The first count indicated 252 beaver; the latest, taken in the winter of 1942-43, indicated 3,100. When the population reaches 4,000 it is planned to take a small catch, increasing it as the capital stock increases.

The plan for beaver rehabilitation falls into three divisions. First, the organization, education and training of the Indian family groups that occupy the area decided upon. Secondly, the closing of the area to trapping of beaver and keeping it closed until the capital stock is built up to the desired level. Thirdly, the planning and control of trapping practice by zoning and by fixed quotas when the area comes into production.

Many other fur projects are in the course of development by the Dominion Government in co-operation with the provinces. In Quebec, besides the Nottaway, now in its sixth year, there are: the Peribonca, in its fourth year; the Old Factory, in its third year; and the Abitibi, in its first year under management. In Ontario there are two—the Kesagami in its third year and the Albany River in its second. It is hoped to add another at Wunnumin Lake or its vicinity. These projects average 7,500,000 acres under management and control, or an aggregate of over 40,000,000 acres of beaver country.

In the western provinces, beaver projects (and muskrat projects other than those mentioned at pp. 267 to 268) include developments at Fisher River, Man. (520,000 acres), and in Saskatchewan, developments at Emmeline Lake (500,000 acres), Beupre Lake (500,000 acres) and Kazan-Cumins Lake (1,200,000 acres). Preliminary work has been undertaken in other districts and the program is being carefully extended as opportunity presents itself, as money is made available, and as the trapping fraternity can be adequately educated to the advantages of planned management in the development of Canada's rich fur resources.

## Section 2.—Fur Farming\*

An article on the growth of the fur-farming industry in Canada appears at pp. 254 to 259 of the 1942 Canada Year Book.

\* Revised in the Fisheries and Animal Products Branch, Dominion Bureau of Statistics.

**Statistics of Fur Farming.**—The fur-farming industry, which had its origin in Prince Edward Island some fifty years ago, is now established in every province and the annual increase recorded in number of fur farms since its introduction was fairly constant up to the outbreak of war. There was at first a substantial decline in prices due to the War and to the ensuing market dislocation and a large number of marginal farms were forced out of business. These circumstances brought about an increase in quality and this, together with the reduced production, has been instrumental in improving the price level.

<sup>1</sup> Based on estimates furnished by the operators of the farms. ceased with the year 1939.

<sup>2</sup> The collection of this information

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. In the early years of the industry the value of animals sold from fur farms exceeded the value of pelts sold; now the latter figure is about six times the former.

<sup>1</sup> The collection of this information ceased with the year 1939.

**Preliminary Statistics for 1942.**—According to a preliminary compilation, fur farms numbered 7,834, land and buildings were valued at \$7,158,730 and fur-bearing animals at \$6,753,855. Animals sold alive numbered 10,899, valued at \$416,896, while the 526,323 pelts sold were valued at \$6,739,121.

### Section 3.—Total Fur Production\*

Early records of raw-fur production are confined to the decennial censuses, when account was taken of the numbers and values of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw-fur production, basing its statistics on information supplied by the licensed fur traders. This survey was continued for some years. More recently, annual statements, based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are now used in the preparation of the statistics issued annually by the Bureau. In the case of Prince Edward Island, the statistics are based on returns supplied directly to the Bureau by the fur traders who deal in furs produced in the Province.

\* Revised in the Fisheries and Animal Products Branch, Dominion Bureau of Statistics.

In 1942 Alberta was the leading province in respect to value of fur production, having replaced Quebec in second place in 1939 and Ontario in first place in 1942. The relation that the value for each province bore to the total for Canada in the year ended June 30, 1942, was: Alberta, 20·8; Ontario, 15·9; Quebec, 15·7; North-west Territories, 11·4; Manitoba, 10·4; Saskatchewan, 9·0; British Columbia, 6·7; New Brunswick, 3·4; Prince Edward Island, 3·0; Nova Scotia, 2·1; Yukon, 1·6.

The number of silver-fox pelts taken in 1942 was little more than half the number in 1939, the peak season, although the average price for this fur jumped from \$15·43 in 1940, the lowest on record, to \$22·96 in 1942. The total values of both muskrat and mink exceeded the value of silver fox for the first time in 1941. The number of pelts taken in 1942 was two and a half times the number taken in 1941; this large increase was mainly accounted for by rabbit pelts which numbered 777,583 in 1941 and 9,012,329 in 1942, and squirrel pelts which numbered 1,935,837 in 1941 as compared with 5,761,433 in 1942. The average price of practically every fur showed an increase in 1942 over 1941.

<sup>1</sup> Coyote or prairie wolf pelts for Manitoba are included with wolf pelts.

Since the First World War, Montreal has been recognized as an international fur market, holding the first Canadian fur auction sale in 1920. Through the medium of the Canadian fur auctions, grading and marketing of furs have been placed on a scientific footing, resulting in more or less stabilized conditional prices to the benefit equally of trapper, breeder, manufacturer, distributor and consumer. Fur-auction sales are held also at Winnipeg, Edmonton and Vancouver.

During the past twenty years or so, immense improvements have been made in the dressing, dyeing and finishing of furs. In 1942, the 18 fur-dressing and -dyeing plants in Canada treated 18,913,432 fur skins, the chief kinds being rabbit (3,150,189), muskrat (1,833,456), and squirrel (1,304,872). The number of plants engaged in the manufacture of fur goods—coats, capes, scarves, muffs, etc.—numbered 484 with a total output valued at \$32,147,114.

**Trade in Furs.**—Before the outbreak of war, a large proportion of the total production of Canadian furs found their way to the London market where they were prepared and manufactured and returned to Canada in the form of the finished product. Under the circumstances brought about by the War, Canada's trade in furs is now carried on mainly with the United States. Figures of imports and exports for the calendar years 1941 and 1942 will be found in Tables 16 and 17 of Chapter XVI of this volume.

# CHAPTER XI.—THE FISHERIES

## CONSPECTUS

	PAGE		PAGE
SECTION 1. THE EARLY FISHERIES.....	274	SECTION 4. THE MODERN FISHING INDUSTRY.....	279
SECTION 2. THE CANADIAN FISHING GROUNDS.....	274	Subsection 1. Primary Production.....	279
SECTION 3. THE GOVERNMENT AND THE FISHERIES.....	274	Subsection 2. The Fish-Processing Industry.....	284
SPECIAL ARTICLE: The Effects of the War on Canadian Fisheries.....	277		

### Section 1.—The Early Fisheries

Fishing is among the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to John Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. Fishing may well be regarded as the first industry to be systematically prosecuted by Europeans in what is, to-day, the Canadian domain. It has since yielded a perennial harvest to both Europe and America.

A more detailed account of the history of the Atlantic fisheries is given at p. 348 of the 1934-35 Year Book.

### Section 2.—The Canadian Fishing Grounds

The fishing grounds of the Dominion are of exceptional national value inasmuch as two of the four great sea-fishing areas of the world border on Canada. They fall naturally into three divisions: Atlantic, inland, and Pacific fishing grounds. A detailed description of each division, of the fish caught, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

### Section 3.—The Government and the Fisheries\*

When the Dominion Government was set up at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of Quebec, which, by agreement, are under provincial administration), the non-tidal fisheries of Nova Scotia and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces and British Columbia, and both the tidal and non-tidal fisheries of Quebec are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island and British Columbia. The fisheries of the Magdalen Islands, Que., formerly administered by the Dominion, were transferred

\* Revised under the direction of Dr. D. B. Finn, Deputy Minister of Fisheries, Ottawa.

to provincial administration, as from Apr. 1, 1943, by agreement between the Dominion Government and the Province. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. (See the Fisheries Act, 22-23 Geo. V, c. 42.) The expenditure of the Dominion on the fisheries, including departmental administration, etc., in the fiscal year 1941-42, was \$1,845,899, (including expenditures in connection with the Pacific halibut and Pacific salmon commissions) and the revenue, exclusive of receipts from sales under an emergent canned lobster control plan, was \$416,643; for the year 1942-43 the expenditure was \$1,913,386 and the revenue \$320,032.

**Conservation.**—Prevention of depletion of the country's fisheries resources through over-fishing or other causes has been a main object of the Federal fisheries authorities. Prevention is accomplished by the enforcement of close seasons, in some cases limitation of catch, the regulation of nets, gear and fishing operations generally, and the forbidding of stream obstruction or pollution. In addition, a system of fish culture is continuously in operation. In 1942 the Dominion Department of Fisheries operated 13 hatcheries, 6 rearing stations, 6 retaining ponds and several egg collecting stations, at an estimated cost of \$181,000, including headquarters' administrative expenses. From the hatcheries and other fish cultural establishments there were distributed in suitable selected waters a total of 32,523,000 trout and salmon eggs, fry and older fish. Joint action, begun in 1929 by the Department of Fisheries and by the Fisheries Research Board (then known as the Biological Board of Canada), has brought about the successful establishment of commercial oyster farming in Prince Edward Island and in Nova Scotia, where control of the oyster areas was transferred to the Dominion authorities by the Provincial Government. In New Brunswick and British Columbia, the other oyster-producing provinces, the oyster areas are under provincial jurisdiction, except those on a small strip of the New Brunswick coast which have been transferred by the Province to the control of the Federal Department so that investigations prerequisite to the establishment of oyster farming may be conducted.

**Direct Assistance to Fishermen.**—Special instruction in improved methods of fish curing, etc., has been made available by the Department of Fisheries to fishermen in various communities in areas where the fisheries are under its administration. Instruction is given by trained Departmental employees, both by word of mouth and by actual demonstration of processing methods. In addition, under arrangements made by the Department with several educational institutions, fishermen on both coasts are assisted by adult-education specialists in studying their problems and in developing means of dealing with those problems by joint action. Costs of this adult education work are paid by the Department.

For some years prior to the outbreak of the War, weather forecasts and reports as to bait and ice supplies and ice conditions were broadcasted to Atlantic fishermen under a plan carried out through the co-operation of the Department of Fisheries and the Radio Division of the Department of Transport. The War, however, compelled first a modification of this broadcasting service and finally its discontinuance.

As part of its effort to increase the domestic demand for Canadian fisheries products, the Department has carried on for some years a lecture-demonstration program. Home economists, on the permanent Departmental staff, give fish cookery demonstrations and lectures in different parts of the country on the food and health values of fish.

**Scientific Research.**—Reference to fisheries research may be found in a special article on Scientific and Industrial Research, published at pp. 998-1001 of the 1940 Canada Year Book.

**International Problems.**—From time to time fisheries questions of international importance have arisen on both of Canada's coasts as well as in the Great Lakes area where problems are complicated by the fact that not only national administrations but also provincial and State governments may be concerned. One international problem of major importance has been the question of United States privileges in the Atlantic fisheries of the Dominion. An outline of the history of this question will be found at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former *modus vivendi* plan which grew out of the unratified treaty of 1888, United States fishing vessels have again been permitted to enter Canadian ports to buy bait and other supplies. For several years, on the British Columbia Coast, Canada extended port privileges (to buy bait, tranship catches, etc.) to United States vessels fishing for halibut or black cod, and in 1942 the privileges were also made available to United States craft fishing for ling cod, grayfish or sharks. Similar privileges were extended by the Washington Government to Canadian vessels in United States ports on the Pacific Coast.

Two fisheries problems of prime importance, both on the Pacific Coast, have been the object of joint action by the Dominion and the United States in recent years. The International Fisheries Commission was set up to deal with the preservation of the halibut fishery of the North Pacific and Bering Sea and the International Pacific Salmon Fisheries Commission was established to deal with the preservation and extension of the sockeye-salmon fisheries of the Fraser River system. Details of the Agreements in connection with these matters are given at p. 287 of the 1940 Year Book.

**Fishing Bounties.**—To assist in the development of the sea fisheries and the encouragement of boat-building, legislation was passed in 1882 (45 Vict., c. 18) providing for the annual distribution, among fishermen and the owners of fishing boats and vessels on the Atlantic Coast, of bounties totalling \$150,000, the sum representing interest on the Halifax Award. In 1891 another Act (54-55 Vict., c. 42) increased the bounty to \$160,000. Payments are now made under authority of the Deep Sea Fisheries Act (R.S.C. 1927, c. 74).

#### 1.—Government Bounties Paid to Fishermen, by Provinces, 1941 and 1942

Province	Persons to Whom Bounties Were Paid		Amounts of Bounties Paid <sup>1</sup>	
	1941	1942	1941	1942
	No.	No.	\$	\$
Prince Edward Island.....	1,340	1,182	10,563	9,597
Nova Scotia.....	8,760	8,294	78,552	75,249
New Brunswick.....	2,130	2,273	19,664	21,220
Quebec.....	6,430	6,570	51,181	53,865
<b>Totals.....</b>	<b>18,660</b>	<b>18,319</b>	<b>159,960</b>	<b>159,931</b>

<sup>1</sup> Amounts include payments to vessel- and boat-owners.

**Collection of Statistics.**—Canadian fisheries statistics are collected and published under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries and those branches of Provincial Governments having jurisdiction with regard to fisheries.

## THE EFFECTS OF THE WAR ON CANADIAN FISHERIES\*

Most striking of the many effects of War upon the Canadian fisheries is the swing over from a condition of over-supply to that of under-supply, the complete change from a buyer's to a seller's market, accompanied by sharp increases in prices of the raw and finished product. From a pre-war marketed value of about \$40,000,000 the return has risen to about \$80,000,000 annually. This is the more striking since there has not been a corresponding increase in output which, during the War, has fluctuated about the pre-war level of 1,100,000,000 lb., fresh basis.

The change was due to world scarcities, but it did not come about during the initial or lag periods which extended from 1939 to about the beginning of 1941. During this period fisheries labour was fairly plentiful because it had not then felt the serious drain of enlistment and of movement towards more lucrative war industries. Shipping difficulties had not yet seriously interfered with availability of materials for the maintenance of the primary or manufacturing operations such as wood containers, paper, steel, salt, rope and others which were still in fairly good supply. Inventories of goods on merchants' shelves had up to this time made rationing unnecessary, and no great shortages of other protein foods had caused the domestic demand for fish products to be more insistent.

Under this regime, prices were still at the low pre-war level, and in 1940 the Salt Fish Board once again found it necessary to make deficiency payments to salt-fish fishermen in order to enhance their livelihood.

Markets were for the most part uncontrolled, and selling and buying were matters left in the hands of private traders who faced the highly competitive conditions that marked the pre-war world trade.

By the summer of 1941, conditions began to change in an accelerated degree. The seemingly unchecked march of the enemy through Europe, the constant and alarming threat of invasion of England, the intensive and unrestricted submarine campaign, and the general threat of catastrophe had directed efforts to the reshaping of the national economy by expanding the manufacture of war munitions and materials as well as by significant increases in the forces of offence and defence.

The effect on fisheries was marked. Fishing boats were requisitioned for essential services to the Armed Forces and skilled fishing and shore labour went to the Merchant Marine, the Navy, the Air Force, and the Army, as well as to the munitions industries. The turnover in labour was great and the efficiency of the manpower hour decreased to a marked degree. In addition to this, the diversion of materials to the expanding program of armaments brought about acute shortages which interrupted maintenance of factories and boats and prevented the expansion of mechanical facilities to offset the inefficiencies of hand labour.

Under these handicaps, fisheries production threatened to fall off. But it was becoming increasingly necessary and important that it be maintained. The Norwegian, British and other European fisheries, upon which not only the United Kingdom but countries in the Caribbean and Mediterranean depended, had disappeared and the indispensability of this staple food, coupled with heightened domestic and United States demand, threw great strains upon the industry, which, together with the Newfoundland industry, assumed the position of being the United Nations' chief source of supply of many fish products.

\* Prepared by Dr. D. B. Finn, Deputy Minister of Fisheries, Ottawa.

At this stage also, because of the extremely short position of world supplies, the intricacies of finance, the difficulties of transportation, and the necessity for all-over planning, the authorities in many importing countries replaced private trading with Government purchases.

It was decided that such arrangements as were necessary with other Allied Governments—particularly with the United Kingdom—for fulfilling Canada's commitments to supply fish products should become the responsibility of the Department of Fisheries, and that Department assumed the duty of assessing requirements and was charged with the responsibility for the maintenance of production suitable to the various needs. In addition, it became necessary to prevent the dislocation of any particular branch of the industry, due to the sudden loss of a traditional export market, where such dislocation was likely to hinder the war effort.

The methods used by the Department included: negotiation and administration of contracts between Canadian and other Governments; close consultation and co-operation with the industry towards the rendering of assistance in securing priorities for the replacement of goods and services; assistance in financing instruments of primary production where the risks and costs were too great for private capital; provision to fishermen of compensation for damage or loss of life occasioned by the hazards of fishing; prevention of disproportionate unbalancing of production due to big demands and high prices in the United States and other markets; and the direction of distribution into essential channels by means of export control.

Under these arrangements, and in spite of the great difficulties which beset the industry, production has been maintained in the aggregate of the pre-war level of 1,100,000,000 lb., as already stated, though in some cases it has been necessary to change the type of product to suit the needs of war. Between 1941 and 1943, Canada has supplied to other United Nations—principally the United Kingdom—under war-time plans and agreements, canned salmon, canned herring, canned sardines, frozen fish, and salted fish equivalent to more than 600,000,000 lb. of fish in the fresh state, far exceeding peace-time exports to the same markets.

Some adjustment of manufacture and sacrifice of domestic markets has been necessary to accomplish this. Ordinarily the Canadian public consumes annually 27,000,000 lb. of canned salmon. During 1942 none of this product was allowed for the domestic market, and in 1943 only 9,600,000 lb. was allowed for this purpose. The Western Canadian production of canned herring in 1939 was slightly over 11,000,000 lb. In 1942, it had risen to more than 73,000,000 lb., the increase being accomplished by a diversion of fish from the production of agricultural fish meals, for feeding, and from the production of salt herring for the Orient. Similarly, there has been a diversion of several species of fish to the production of frozen fillets in order to supply increased quantities to the United Kingdom.

A noteworthy development has been the great increase in the production of fish oils which are rich in vitamins. This has come about mainly because of increased demand from the United Kingdom, where, following the collapse of Denmark, the normal butter supply had to be replaced with vitamin-fortified margarine. In addition, the fact that medicinal cod-liver oil could no longer be imported from Norway placed a premium upon Canadian oils.

This demand for vitamin oils and concentrates has led to the utilization of materials that formerly were wasted and of some species of fish which, under former conditions, the fishermen did not seek to take. Examples are the livers of ling cod, black cod, salmon, grayfish, soupfin sharks, soles, halibut, swordfish, and tuna. Their value to fishermen is now measured in the hundreds of thousands of dollars and the need for the finished product has led to the establishment of the medicinal oil-refining branch of the industry.

The world shortages of fish and fish products have inevitably led to increases in prices of the raw material and of the finished products. In general, the position of the fisherman has improved because his prices have risen more than his costs and there are fewer to share the return from the production, which has remained fairly constant. The position of the processor is also more secure since, on the one hand, the risks normal to export trade have in many instances been removed by Government contracts and other arrangements which assure him firm prices throughout the producing season and, on the other hand, he has the knowledge that the only brake upon the upward trend in prices is the presence of Government ceilings.

This removal of the risk of loss in the export markets has made for the emergence of new exporters who were formerly restrained by lack of capital or by lack of experience in such markets. Since there is, in general, no increase in the amount of fish available for export, competition between those who desire to export it increases as they become more numerous. This has been one of the principal influences in keeping up the prices to fishermen, a condition which has made unnecessary the device of production bonuses or subsidies. Indeed, it may be doubted whether increase in price would lead to significant increase in production, which, if it is necessary, will require the movement of fairly large volumes of capital into the industry in the form of increased shore facilities and equipment for more modern methods of fishing.

*Summary of War-Time Controls re Fisheries.*—Apart from the Government controls over labour, finance and transport, as they apply to most industries, additional ones are operative in the fishing industry and are applied by the Department of Fisheries and the Wartime Prices and Trade Board. The latter has now established price ceilings on most kinds of fish sold in Canada and has put under export control certain cures of fish, particularly fresh and frozen, in order to assure adequate supplies for the home market. The Department of Fisheries, on the other hand, is responsible for the controls designed to direct predetermined amounts of canned salmon and canned herring to the United Kingdom, to other markets, and to Government agencies, or to the Red Cross. The Department of Fisheries also administers the international allocations of salted fish that are recommended by the Combined Food Board and insures that Canadian supplies of salted fish are directed to those markets the Board considers most needy. In addition, the Department is responsible for arranging the flow of frozen fillets to the United Kingdom.

## Section 4.—The Modern Fishing Industry\*

### Subsection 1.—Primary Production

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only \$125,000. It doubled in the following decade and by 1860 had passed the million-dollar mark. Ten years later it reached \$6,000,000 and this was again more than doubled by 1878. By 1900 it had reached almost \$22,000,000 and the growth continued with little interruption until 1918, when it reached \$60,000,000. From 1918 until 1940 there were decreases in value, due to lower prices rather than to smaller catches. Production in 1941 surpassed the 1918 level and 1942 showed an increase over 1941 of 20·6 p.c. The figures given represent the total value of fish as marketed, whether in a fresh, dried, canned or otherwise prepared state.

\* Revised by the Fisheries and Animal Products Branch, Dominion Bureau of Statistics. For a list of the publications of this Branch, see Chapter XXX.

## 2.—Values of the Products of the Fisheries of Canada, 1870-1942

Year	Value	Year	Value	Year	Value	Year	Value
	\$		\$		\$		\$
1870.....	6,577,391	1907.....	25,499,349	1920.....	49,241,339	1933.....	27,496,946

<b>Totals.....</b>	<b>38,976,294</b>	<b>40,492,976</b>	<b>40,075,922</b>	<b>45,118,887</b>	<b>62,258,997</b>	<b>75,116,933</b>

The cod of the Atlantic and the salmon of the Pacific were rivals for first place in the earlier years of the fishing industry; since 1895 salmon has definitely taken the lead, with lobster, in recent years and until the present war reduced the foreign market, in second place. In 1942 herring, with an exceptionally large catch, took second place in order of marketed value, and cod was third.

In Table 4 the quantities given are those of primary products caught, but the values are those of all products marketed, both primary and secondary. The grand totals are also subdivided so as to show the values of the sea fisheries and inland fisheries, respectively, as compared with the whole. More detailed tables of quantities and values of both sea and inland fish marketed may be found at pp. 9-16 of the "Report on Fisheries Statistics", published by the Dominion Bureau of Statistics.

#### 4.—Quantities Caught and Values of All Products Marketed of the Chief Commercial Fishes of Canada, 1938-42

NOTE.—The catch as shown in this table is in each case exclusive of the quantity of livers landed, but the value includes the value of the livers as marketed.

<sup>1</sup> Cusk included prior to 1941.

<sup>2</sup> Includes other items not specified.

The values upon which the figures of Table 5 are based are those of the fish products as marketed, i.e., they include values added by processing such as the canning, curing, etc., of fish products. The indexes of volume, on the other hand are based upon the quantities of fish reported as caught and landed.

**5.—Percentages of Total Value and Indexes of Volume of Fisheries Production, by Principal Kinds of Sea and Inland Fish, 1931-42**

NOTE.—Based on values as marketed and quantities caught.

Alewives.....	93.2	80.9	102.1	97.9	115.0	123.0	103.7	144.7	170.9	86.6	86.3	91.1
Crabs <sup>5</sup> .....	—	—	—	—	—	—	—	—	—	—	—	—

<sup>1</sup> Landings at British Columbia ports by United States vessels excluded for 1934 and later years.

<sup>2</sup> Hake only for 1941 and 1942.

<sup>3</sup> Clams only for 1941 and 1942.

<sup>4</sup> Totals include minor items

not specified.

<sup>5</sup> Indexes are not given in this case since no production was recorded for the base year.

<sup>6</sup> Since ling cod was included with cod for 1926, the average of the years 1927-30 was taken as the quantity of ling cod for 1926 and this was deducted from the quantity of cod reported for 1926, the resulting amount being used as the base for the volume index.

**Subsection 2.—The Fish-Processing Industry**

A special article on Developments in Fish Processing, prepared by the Deputy Minister of Fisheries, Ottawa, appears in the 1941 Year Book, pp. 225-226.

**Establishments, Capital, Employees, Materials Used and Products.—**  
Among the fish-processing establishments in operation in Canada in 1942, the salmon canneries comprised the principal group with an investment valued at \$16,602,929, or 49 p.c. of the total for all establishments. About 74 p.c. of the value of production of the establishments was credited to fish canned, cured or otherwise prepared, and 26 p.c. to fish marketed for consumption in a fresh state.

## 8.—Fish-Processing Establishments, 1941 and 1942

Kind of Establishment	1941		1942

**Historical Sketch.**—A short historical outline of the development of the mineral industry in Canada is given at pp. 309-310 of the 1939 Year Book.

**Geology and Economic Minerals.**—A special article on this subject appears at pp. 3-14 of the 1942 Year Book.

**Statistics of Mines and Minerals.**—The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

More detailed information on the mineral production of Canada is given in the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.\*

### Section 1.—Mineral Lands Administration and Mining Laws

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves and in National Parks; all other mineral lands lying within the boundaries of the several provinces are administered by the respective Provincial Governments.

\*Except where otherwise noted, this chapter has been revised in co-operation with W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXX.

### Subsection 1.—Mining Laws and Regulations on Dominion Lands\*

Dominion lands to which these regulations apply are those administered by the Lands, Parks and Forests Branch, Department of Mines and Resources, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the Territories of Canada reserve to the Crown the mines and minerals that may be found on or under such lands, together with the right of operation.

The Acts and regulations governing mining and quarrying on Dominion lands are: *Yukon and Northwest Territories*—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations; and Domestic Coal Permits. *Yukon*—Yukon Placer Mining Act (R.S.C., 1927, c. 216); Yukon Quartz Mining Act (R.S.C., 1927, c. 217); Dredging Regulations; Petroleum and Natural Gas Regulations. *Northwest Territories*—Quartz Mining Regulations; Placer Mining Regulations; Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations; and Permits to remove sand, stone and gravel from beds of rivers.

Special petroleum and natural gas regulations now apply to the Yukon Territory and to that portion of the Northwest Territories lying west of a line 75 miles east from the centre line of the main channel of the east channel of the Mackenzie River. These regulations provide that no person shall enter the area to which they apply for the purpose of prospecting for oil and staking a location without first obtaining from the Minister of Mines and Resources a preliminary authority to do so.

Copies of these regulations are available from the Lands, Parks and Forest Branch of the Department of Mines and Resources, Ottawa.

### Subsection 2.—Provincial Mining Laws and Regulations†

The granting of land in any province, except Ontario, no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. Some early grants in New Brunswick and Quebec also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations may be summarized as follows:—

*Placer.*—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

*General Minerals.*—These are sometimes described as quartz, lode minerals or minerals in place. The most elaborate regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence to search for mineral deposits, valid for a year must be obtained. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years, when a grant or lease of the mining rights may be obtained subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

\*Compiled from material supplied by the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

†Compiled from material supplied by the Provincial Governments.

*Fuels.*—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a permit to drill on promising ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

*Quarrying.*—Regulations under this heading define the size of holding and the terms of lease or grant.

The legislation controlling mining and minerals in each province is given at pp. 278-279 of the 1942 Year Book. Copies of the legislation and regulations and details concerning them may be obtained by application to the following authorities:—

NOVA SCOTIA.—Minister of Mines, Parliament Buildings, Halifax.

NEW BRUNSWICK.—Department of Lands and Mines, Fredericton.

QUEBEC.—Minister of Mines, Quebec.

ONTARIO.—Department of Mines, Parliament Buildings, Toronto.

MANITOBA.—Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg.

SASKATCHEWAN.—Department of Natural Resources, Regina.

ALBERTA.—Department of Lands and Mines, Edmonton.

BRITISH COLUMBIA.—Department of Mines, Victoria.

## Section 2.—Summary of General Production

A special article on the Development of Canada's Mineral Resources in Relation to the Present War Effort, so far as this development had taken place by the middle of 1940, appears at pp. 298-309 of the 1940 Year Book.

The importance of mineral production as compared with other primary industries in Canada is indicated in Chapter VII while its part in the external trade of Canada is dealt with in Chapter XVI, Part II, especially Section 3, Subsections 2 and 5.

### Subsection 1.—Government Control of Non-Ferrous Metals and Fuels in War-Time\*

Because the non-ferrous metal and war mineral supply situation had to be viewed from the standpoint of the Allied Nations as a whole, Canada has regarded herself as in the same position as other United Nations. Consequently this country has both stimulated production and curtailed non-essential consumption.

To co-ordinate the nation's efforts to meet war needs, a Metals Control was established by the Department of Munitions and Supply on July 15, 1940. The Control has been responsible for stimulating Canadian output of non-ferrous metals and strategic minerals and for curtailing non-essential uses. In addition, it has been responsible for obtaining from other countries those non-ferrous metals and minerals in short supply in Canada.

\* Contributed by the Department of Munitions and Supply.

The various Government agencies have stimulated production of the major non-ferrous metals—copper, nickel, lead and zinc, as well as tungsten, molybdenum, chrome, mercury, mica, arsenic, fluorspar, graphite and cobalt. Six of these—mercury, tungsten, chrome, molybdenum, muscovite mica and fluorspar—were not produced in quantity in Canada before the War.

From 1923 to 1939 Canada produced no recorded output of iron ore. In 1937 the rebuilding of surface equipment was started at the Helen Mine in the Michipicoten District of Ontario, and aided by an Ontario Government subsidy a substantial output is being mined. One of the biggest iron-ore developments in Canadian history was begun in 1943 at Steep Rock Lake, west of Port Arthur, Ontario. The undertaking is being privately financed with assistance from various governments. The Federal assistance takes the form of a subsidy on the movement of some ore, plus a loan of \$2,000,000 to the Canadian National Railways to build an ore dock and trackage. This advance is to be repaid out of production.

Petroleum development has been stimulated by the Oil Control of the Department of Munitions and Supply in co-operation with the Department of Mines and Resources, and by a Crown company, Wartime Oils Limited, operating under the direction of the Control. The Company has assisted financially in the exploitation of a number of wells in the west flank of the Turner Valley and the Oil Control has investigated other possible sources.

Still another Government agency, the Emergency Coal Production Board, operating in co-operation with the Coal Control of the Department of Munitions and Supply, has extended financial assistance to coal operators with a view to increasing production. The Dominion Fuel Board for nearly two decades has maintained a close study of the coal-mining industry and has administered various measures of governmental assistance; this Board and its staff are operating under the Coal Control for the duration of the War.

To conserve petroleum and coal gas for war production, the Power Controller of the Department of Munitions and Supply issued a series of orders from February to September, 1942, which caused thousands of owners of buildings, including dwellings, to switch from gas to coal for heating and steam production.

## **Subsection 2.—General Statistics of Mineral Production**

**Historical Statistics.**—Definite records of the annual value of mineral production go back only to 1886, although actual production began with the earliest settlements. The figures given in Table 1 are not strictly comparable throughout the whole period, minor changes having been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.

<sup>1</sup> Beginning with 1931 exchange equalization of gold production is included.  
revision.

<sup>2</sup> Subject to re-

**Current Production.**—The depression beginning in 1930 had a profound effect upon the production of minerals in Canada. The decline in general commodity prices and the increased price of gold provided a two-fold stimulus to the production of gold and, as in the 1920's, output was increased. Old properties expanded their operations and new districts and mines were discovered, developed and brought into production. Base-metal prices declined to low levels, but the improvements that low prices and competition had brought about in productive facilities during the 1920's, together with the presence in the ores of small but appreciable quantities of precious metals, enabled the producing companies to carry on. After a period of readjustment, production expanded again. However, the serious reduction in industrial and construction operations materially restricted the production of coal, non-metallies other than fuels, and the various structural minerals.

The situation, therefore, prior to the outbreak of war in 1939 was that Canada's mineral industries were in a particularly strong position so far as their ability to make a substantial contribution to the country's war effort was concerned. Such a possible contribution had two aspects, namely:—

1. The production at reasonable cost of those minerals that are essential for the manufacture of armaments, munitions and other war supplies as well as for domestic civil needs.

2. The creation of essential foreign credits by the production of gold and silver and of other minerals, surplus to national needs, for export sale to other countries.

The production of gold was reaching new high records each year so that in 1940 Canada stood second among the countries of the world with 12·8 p.c. of the total world production. Reliable world figures of gold production are difficult to obtain at present as accurate data are not available. As already indicated, developments in connection with base metals enabled Canadian companies to produce large supplies of copper, nickel, lead and zinc on a low-cost basis. Metallurgical processes had been extended to include final refining operations of sufficient capacity to handle the major part of Canadian production. In this field, while no aluminium ores are mined in Canada, with the availability of low-cost hydro-electric power, metallurgical plants for the production, from imported ores, of refined aluminium on a

large scale had been established. At the beginning of the War, producers of all these base metals entered into voluntary agreements with the British Government to sell the surplus above Canadian requirements at practically no advance on the low prices prevailing before the War, thus assuring to Great Britain a supply of these essential materials without the risk of advancing prices.

In the case of fuels, non-metallics other than fuels, and structural materials, productive capacity in Canada for many essential minerals was more than sufficient to provide for the then-existing industrial and civil requirements. Thus the expanding demands of war industries and the construction operations necessitated by various features of the war program were readily met.

<sup>1</sup> Value in Canadian funds.<sup>2</sup> Not available.<sup>3</sup> Due to war-time restrictions, the quan-

ties of these metals cannot be given and the values are combined.

<sup>4</sup> Including brucite.<sup>5</sup> Sulphur content of pyrites shipped and estimated sulphur contained in the sulphuric acid made from smelter gases.<sup>6</sup> Includes relatively large quantities used in the manufacture of chemicals.

**Analysis of Current Value and Volume.**—In order to interpret more clearly and simply the trends in mineral production in Canada over the period since 1933, Table 3 gives the percentage of the total value contributed by each principal mineral in each year. Values upon which percentages in this table are based are the annual values of mineral production expressed in Canadian currency as published in Tables 1 and 2.

**3.—Percentages of the Total Value of Mineral Production, by Principal Minerals, 1933-42**

Although the year 1926 was not a normal year in mineral production to the same extent as in some other productive fields, the rapid changes that have resulted from circumstances arising since 1926 can be seen more clearly by using it as a base year. Table 4 shows the indexes of volume of mineral production, using 1926 as the base year, by principal minerals, for the period 1931-42. The very large increases in the production of petroleum and platinum metals are especially noteworthy.

## 4.—Indexes of Volume of Mineral Production, by Principal Minerals, 1931-42

(1926=100)

NOTE.—Indexes for 1927-30 will be found at p. 319 of the 1940 Year Book.

## Subsection 3.—Provincial Distribution of Mineral Production

Since 1907 Ontario has been the principal mineral-producing province of Canada and, in recent years, has contributed about one-half of the total mineral production of the Dominion. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the Province. In 1940 Ontario's production was 49.4 p.c. of the total but it has since declined to 47.7 p.c. in 1941, 45.7 p.c. in 1942 and 43.8 p.c. in 1943. For many years British Columbia, where most of the important metals are found and substantial quantities of coal exist, was in second place, but for the past six years Quebec has held that position. A great part of Quebec's mineral production is made up of gold, copper and asbestos. Nova Scotia and Alberta are the most important coal-producing provinces. The discovery and development of the Flin Flon and Sherritt-Gordon orebodies resulted in the Provinces of Manitoba and Saskatchewan becoming important producers of base metals and gold and silver. Alberta, besides being a big producer of coal, is the most important province for the production of petroleum and natural gas, and this activity has shown a rapid increase in recent years.

## 5.—Mineral Production of Canada, by Provinces, 1926-43

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book, and for 1911-25, inclusive, at p. 323 of the 1939 edition.

<sup>1</sup> Includes production of the Northwest Territories.

<sup>2</sup> Subject to revision.

Table 6 shows the different minerals that made up the mineral production of each province and also the particular province or provinces that contributed to the production of each mineral in Canada in 1942. Because of the restrictions on space in this edition of the Year Book, these details for 1941 have not been included, but the information may be secured from the Annual Report on the Mineral Production of Canada 1941, published by the Dominion Bureau of Statistics.

## 6.—Detailed Mineral Production of Canada, by Provinces, 1942

NOTE.—Quantities and values of minerals produced during 1942 in Yukon were: gold, 83,246 fine oz., \$3,204,971; silver, 482,133 fine oz., \$203,296; antimony, 78 lb., \$13; tungsten concentrates, 968 lb., \$840; lead, 1,322,065 lb., \$44,448; total, \$3,453,568; and in the Northwest Territories: gold, 99,394 fine oz., \$3,826,669; silver, 22,531 fine oz., \$9,500; natural gas, 1,500 M cu. ft., \$335; petroleum, 75,789 bbl., \$108,477; tungsten concentrates, 98,218 lb., \$23,725; copper, 74,963 lb., \$7,561; total, \$3,976,267. War-time restrictions preclude the publication of data for other important minerals found in these areas. For the Dominion totals of individual minerals, see Table 2. Dashes in this table indicate no production recorded. The ton referred to is the short ton of 2,000 lb.

### Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in the Mineral Industries

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation

of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. Additional data published at irregular intervals, include such features as capital employed, numbers of employees, wages and salaries paid and net value of sales.

The figures for "net income from sales" of industries given in Tables 7 and 8 are those reported by the operators, and are in each case the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this chapter where, in the cases of copper, lead, zinc and silver, the values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminium where imported ore only is used. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 7 and 8 include products not of Canadian origin.

#### **Subsection 1.—Principal Factors in the Mineral Industries**

An explanation of what is included in the figures under the headings "Capital Employed", "Employees", and "Fuel and Electricity for Heat and Power" in Tables 7 and 8 is given at p. 244 of the 1941 Year Book.

#### **Subsection 2.—Growth of the Mining Industry in Recent Years**

Canada's mining industry is playing an increasingly important part in the economic life of the nation. The rise in the price of gold since 1933 (\$20.67 per fine ounce in 1933 to \$38.50 in 1943) has resulted in the mines being able to produce from ore that was hitherto unprofitable, and has stimulated prospecting to such a degree that many new mines have been discovered. In addition, parts of Canada not hitherto of commercial importance have been opened up and new communities have been established with their resultant markets for consumer goods and mine supplies.

During the present war, Canadian base-metal mines are being operated to capacity and additions to plant have been made wherever practicable to supply the Allies with nickel, copper, lead, zinc and other metals of strategic importance. The officers of the Department of Mines and Resources have made special efforts to assist in the location of deposits of other metals and minerals that were formerly imported. Important among these is tungsten, manganese, and magnesium.

Canada's mineral production in 1943 was valued at \$524,426,850; this figure is slightly lower than that of 1942, \$566,768,672, which was the highest ever recorded. Metals as a group totalled \$357,269,458, a decrease of 9 p.c. from that of the previous year; fuels, including coal, natural gas, crude petroleum and peat amounted to \$90,283,023, a decrease of 2 p.c.; other non-metallies showed a very slight difference, the figure being \$36,437,658 in 1943 as against \$36,677,122 in 1942; and other structural materials, including clay products, cement, lime, stone, sand and gravel, at \$40,436,711, decreased 12 p.c. from the preceding year.

## 7.—Principal Statistics of the Mineral Industries of Canada, by Groups, 1937-42, and by Provinces, 1941 and 1942

<sup>1</sup> Includes freight and treatment charges.<sup>2</sup> Revised since the publication of the 1942 Year Book.

## Subsection 3.—Principal Mineral Industries

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1941 and 1942 is presented in Table 8. In spite of the difficulties imposed by the War through labour shortages, lack of new equipment and essential supplies necessary for the mines, the gross value of output for the entire auriferous quartz mining industry, including the value of recoverable metals, gold, silver, etc., totalled \$160,564,783 in 1942 compared with \$179,103,182 in 1941.

## 8.—Principal Statistics of the Mineral Industries of Canada, 1941 and 1942

<sup>1</sup> Includes freight and treatment charges.

## Section 4.—Production of Metallic Minerals

The metals of chief importance in Canada are copper, gold, lead, mercury, nickel, those of the platinum group, radium, silver and zinc. These are dealt with in order below. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (see Tables 2 and 6). World production figures for gold and silver are given at pp. 317-319.

### Subsection 1.—Copper

A brief outline of the development of the copper-mining industry in Canada is given at pp. 249-250 of the 1941 Year Book.

Copper is usually considered as second to iron in importance among war metals, more because of the large quantities required in the application of ordinary industrial processes to war needs than for its specific military uses. The Dominion is equipped with two large copper refineries, at Copper Cliff and Montreal East, capable of turning out about 80 p.c. of the total production in the form of refined metal. The Canadian copper-mining industry is therefore in a position to make a major contribution toward meeting war-time requirements. Furthermore, the industry, by its ability to produce this copper profitably at the low pre-war price of slightly over 10 cents per pound, is making a substantial contribution to the conservation of financial resources.

### 9.—Copper Produced in Canada, by Provinces, with Total Values, 1926-42

NOTE.—Figures for the years 1886-1910, inclusive, will be found at p. 272 of the 1916-17 Year Book and for 1911-25 at p. 335 of the 1939 edition.

<sup>1</sup> First reported production.

<sup>2</sup> Includes 779,307 lb. valued at \$73,855 produced in Nova Scotia in 1936; 180,609 lb. valued at \$23,620 in 1937; 75,567 lb. valued at \$7,535 produced in N.W.T. in 1938; 1,269,179 lb. valued at \$128,086 produced in Nova Scotia and 42,382 lb. valued at \$4,277 produced in N.W.T. in 1939; 32,727 lb. valued at \$3,301 produced in N.W.T. in 1941; and 74,963 lb. at \$7,561 in 1942.

### Subsection 2.—Gold

The primary importance of gold production in connection with Canada's war effort is its function in strengthening the foreign credit position, particularly in relation to the United States. Gold is still by far the most important item on the mineral production list from point of value although the output for 1943 was the lowest since 1935 and 24.6 p.c. below that of 1942. This reduction was necessitated by increased need of base metals for war requirements rather than gold for foreign exchange.

A short review dealing with the development of gold mining in Canada and giving information concerning the principal gold-producing properties across Canada appears at p. 251 of the 1941 Year Book.

### 10.—Quantities of Gold Produced in Canada, by Provinces, 1926-43

NOTE.—Figures for the years 1862-1910, inclusive, will be found at pp. 268-269 of the 1916-17 Year Book and for the years 1911-25 at p. 336 of the 1939 edition.

<sup>1</sup> From 1920 to 1931, inclusive, values calculated on basis 1 fine oz. = \$20.671834; since then, at world prices in Canadian funds. <sup>2</sup> First reported production in this province. <sup>3</sup> Includes value of production of the Northwest Territories amounting to \$7,038 in 1935; \$35 in 1936; \$239,190 in 1938; \$1,876,224 in 1939; \$2,123,621 in 1940; \$2,977,359 in 1941; \$3,826,669 in 1942; and \$2,276,736 in 1943. <sup>4</sup> Subject to revision.

## Subsection 3.—Iron\*

The large iron and steel industry of Nova Scotia draws its requirements of iron ore from the easily accessible and abundant supplies of the high-grade Wabana deposit in Newfoundland. In Ontario, also, there has been a broad development of the primary iron and steel industry largely because cheap and high-grade supplies of iron ore are readily available from the Mesabi Range of Minnesota, while coal supplies are drawn from the nearby coalfields of Pennsylvania.

## 12.—Iron-Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1926-43

NOTE.—Figures for the years 1886-1910, inclusive, will be found at p. 373 of the 1936 Year Book and for the years 1911-25 at p. 340 of the 1939 edition.

<sup>1</sup> Subject to revision.

During the summer of 1937, the Algoma Ore Properties, Ltd., commenced rebuilding the surface equipment at the New Helen mine in the Michipicoten district, where reserves are estimated at 100,000,000 tons of siderite or carbonate ore, averaging about 35 p.c. iron, rather high in sulphur and therefore requiring roasting to fit it for use in the blast furnace. As a result of an Act passed by the Ontario Legislature, which provides for a bounty of 2 cents per unit of iron content for a period of 10 years commencing Jan. 1, 1939, Canada was able to report, for the first time since 1923, a production of iron ore for 1939. In addition, development work has been carried on at Steep Rock Lake east of Atikokan, 135 miles west of Port Arthur, for the production of high-grade iron ore during the winter of 1937-38 by diamond drilling through ice and detailed surveys for the diversion of the Seine River and drainage of Steep Rock Lake for open-pit mining are now under way. These deposits appear to be one of the most important mineral discoveries made in Canada in recent years. The highest grade ore known is at the Josephine property at Michipicoten Harbour, Algoma District, while large but lower-grade ore deposits

\*The known resources of iron ore are described briefly at p. 411 of the 1934-35 Year Book, and a sketch of the iron and steel industry of Canada is given at pp. 452-456 of the 1922-23 Year Book and at p. 255 of the 1941 Year Book.

exist at the Ruth property about 2 miles away. Josephine mine is estimated to contain 1,271,000 tons of hematite averaging 51.3 p.c. iron and 21 p.c. silica, down to the sixth level. Construction work on this mine began in the fall of 1941. The drainage of Parks Lake was undertaken and by the end of October the main basin of the lake under which the ore-body is located was dewatered.

#### Subsection 4.—Lead

Lead is obtained in Canada largely from the ores of British Columbia, where production began with 88,665 lb. in 1891. Bounties were paid on lead produced in Canada from 1899 to 1918 but the highest production of this period was 56,900,000 lb. in 1905. However, as a result of developments in British Columbia mentioned below, production has increased greatly since the War of 1914-18.

With this increased production in Canada added to that of Australia, which is one of the principal lead-producing countries of the world, it seems likely that ample supplies will be available for Britain and the Allies in the present conflict.

The data in Table 13 represent the quantities of lead produced in Canada from domestic ores, together with estimated recovery from lead ores and concentrates exported.

#### 13.—Quantities and Values of Lead Produced from Canadian Ores, 1926-42

NOTE.—Figures for the years 1887-1910, inclusive, will be found at p. 367 of the 1929 Year Book and for the years 1911-25 at p. 341 of the 1939 edition.

<sup>1</sup> Average yearly prices at London, England.

**British Columbia.**—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing from 1930 to 1935 for lead, zinc and silver, many of the small silver-lead mines of the Slocan remained idle.

**Other Provinces.**—Occurrences of lead have been found in Gaspé Peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf County, where the Tetreault mine produces lead and zinc concentrates. Lead production in Ontario has come chiefly from the Galetta mine and smelter, which closed down in the summer of 1931. An important source of lead in recent years is the silver-lead ores of the

Mayo district of Yukon. In 1935 production of silver-lead-zinc concentrates was resumed at the Sterling mine, Richmond County, Nova Scotia, but operations ceased in 1939. Production by provinces in 1942 is shown in Table 6, p. 297.

#### Subsection 5.—Magnesium

No magnesium was being produced in Canada at the outbreak of the War, the first commercial production since 1918 being reported in 1941. This metal, the lightest that is stable under atmospheric conditions, is in great demand for war purposes. It is used for the construction of aeroplanes and parts of aeroplane engines and, in addition, has wide uses in powdered form for flares and incendiaries. Magnesium-containing minerals are widely distributed and, in addition, the sea forms an enormous source. In Canada the most abundant source is dolomite which occurs in many locations.

Magnesium produced in 1941 amounted to 10,905 lb. valued at \$2,944 and was in the form of magnesium powder produced from magnesite obtained from deposits located at Marysville in the Fort Steel Mining District of British Columbia. Production in 1942, which amounted to 808,718 lb. valued at \$355,836, included the metal produced at Trail, B.C., in the form of ingots and powder, and in magnesium chloride and alloys together with the metal produced in Ontario by Dominion Magnesium Limited, a Government-owned plant. This company employs the ferrosilicon process and utilizes dolomite as the source of the metal; the rock is quarried in the immediate vicinity of the plant. Calcined brucite rock shipped from Wakefield, Que., was employed at the commencement of operations.

#### Subsection 6.—Nickel

The Canadian production of nickel has been derived almost entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. The ore is mined principally for its nickel and copper content but gold, silver, selenium, tellurium and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved reserves of nickel ore in Canada are estimated to be sufficient to provide for world requirements for many years, while in addition there are large indicated deposits as yet undeveloped.

After the War of 1914-18 the producing companies instituted varied researches to discover and encourage new peace-time uses for the metal. The success attending their efforts has accounted very largely for the marked increase in production made possible by extensive additions to their plants and facilities. The automobile industry, electrical machinery, cooking utensils, submarine cables and various nickel alloys have all helped to absorb this increased production. However, nickel requirements for armament production in the present war are on an ever-increasing scale with the result that the peace-time market which took years to develop has had to give place to the war-time demands of Allied countries.

Nickel is very important in war both because of its strictly military uses such as armour plate, gun forgings, gun recoil springs and bullet jackets, and for its use in industrial nickel steels for the production of war equipment.

**14.—Quantities and Values of Nickel Produced in Canada, 1926-42**

NOTE.—Figures for the years 1889-1910, inclusive, will be found at p. 368 of the 1929 Year Book and for the years 1911-25 at p. 342 of the 1939 edition.

**Subsection 7.—Metals of the Platinum Group**

Metals of this group produced in Canada include platinum, palladium, rhodium, ruthenium, osmium and iridium. Platinum and palladium are of chief importance. Since the early days there has been a small recovery of platinum associated with the gold of the alluvial deposits of British Columbia and other small amounts have been recovered in the refining of base metals at Trail. However, the chief source of the platinum group in Canada is the nickel-copper ore of Sudbury, and the great increase in the output of this ore in recent years has resulted in greater production of the platinum metals, making Canada the leading producing country of the world. The next most important countries are Russia and Colombia.

**15.—Quantities and Values of Platinum and Palladium Produced in Canada, 1926-43**

NOTE.—Records of the platinum production in Canada go back to 1887, but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for the years 1921-25 will be found at p. 340 of the 1940 Year Book.

<sup>1</sup> Includes also rhodium, ruthenium, osmium and iridium. <sup>2</sup> Total value of production for the platinum group; war-time restrictions preclude the subdivision of this figure.

**Subsection 8.—Pitchblende Products**

A short description of the production of pitchblende products appears at p. 304 of the 1942 Year Book.

**Subsection 9.—Silver**

A short review of silver production in Canada is given at pp. 258-259 of the 1941 Year Book.

Silver production attained its maximum of 32,869,264 fine ounces in 1910 when the Cobalt silver camp was at its peak but production from that source has declined. At the present time, the Sullivan mine in British Columbia, primarily noted for its lead and zinc, is the largest producer of silver in Canada.

**16.—Quantities and Values of Silver Produced in Canada, 1926-43**

NOTE.—Figures for the years 1887-1910, inclusive, will be found at p. 361 of the 1933 Year Book and for the years 1911-25 at p. 344 of the 1939 edition.

<sup>1</sup> First time reported.

<sup>2</sup> Subject to revision.

**Subsection 10.—Zinc**

Information concerning the principal zinc-mining properties of Canada is given at p. 260 of the 1941 Year Book.

Canada is in the position of being a large producer, far in excess of domestic requirements, and thus a large exporter of zinc. Since May, 1941, Canadian consumption has been curtailed and all tonnages beyond such requirements are under sale contract to the United Kingdom.

**18.—Quantities and Values of Zinc Produced in Canada, 1926-42**

NOTE.—Figures for the years 1911-25 are given at p. 347 of the 1939 Year Book.

<sup>1</sup> Estimated foreign smelter recoveries and refined zinc made in Canada.**Section 5.—Production of Fuels****Subsection 1.—Coal**

The fuel situation in Canada is somewhat anomalous, as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while the areas of densest population and greatest industrial development, in Ontario and Quebec, are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio.

**Dominion Fuel Board.\***—The Board was created in 1922 to meet the need for a permanent organization responsible to the Government for a thorough and systematic study of the fuel situation and recurrent shortages experienced throughout Canada. It is composed of permanent members of the Dominion Civil Service and the staff of the Board constitutes a division in the Bureau of Mines and Geology, Department of Mines and Resources.

In recent years the policy of the Government has been to extend the market for Canadian coal and to that end financial assistance in the form of subventions has been given to the coal industry since 1928, the Board being responsible for the administration of subvention payments. The amount of coal moved under these assisted rates increased from 146,126 short tons in 1928 to a maximum of 3,403,581 short tons in 1939 and was 1,091,887 net short tons in 1943. Of the total moved under assisted rates in 1943, 809,161 short tons were from Nova Scotia and New Brunswick and 282,726 short tons from Western Canada.

The Dominion Fuel Board also administers the Domestic Fuel Act (17 Geo. V, c. 52) authorizing a bonus on Canadian coal converted to coke and sold for domestic use and, from Apr. 1, 1941, the Act (20-21 Geo. V, c. 6) to place Canadian coal used in the manufacture of coke for metallurgical purposes upon a basis of equality with imported coal.

**Coal Administration.**—Since the outbreak of war, the Dominion Fuel Board has collaborated closely with the Coal Administrator of the Wartime Prices and Trade Board and on Aug. 6, 1941, the Coal Administrator took over, for the duration of the War and until further order, the powers, duties, functions, staff and establishment of the Board.

In December, 1942, P.C. 10674 was passed establishing the Emergency Coal Production Board. On this Board the Coal Administrator acted as Chairman.

\* Prepared by F. G. Neate, Deputy Coal Administrator.

**Coal Control.**—Order in Council P.C. 1752 of Mar. 5, 1943, transferred the Coal Administration from the Wartime Prices and Trade Board, Department of Finance, to the Department of Munitions and Supply and the Coal Control was created. The duties and functions of the Coal Control in general are to study the production and importation of coal into Canada and to maintain an equitable distribution thereof; to regulate and maintain price control and prevent infraction of the price ceilings, and to carry on the powers and duties of the Dominion Fuel Board.

The Emergency Coal Production Board formerly under Department of Finance also was transferred to Department of Munitions and Supply, by Order in Council P.C. 1752, dated Mar. 5, 1943. During 1943 the Emergency Coal Production Board actively assisted coal-mine operators where necessary in maintaining and increasing production, either through production subsidy or by financial assistance in the form of loans or grants. Also initiated and financed by the Board were six stripping operations in Alberta which were to provide a reserve to meet emergencies. It was also instrumental in the re-opening of a large stripping operation in southern British Columbia.

The Board, in co-operation with the Department of Mines in Quebec, assisted in developing small local peat fuel production operations in various parts of the Province, and assisted them financially. The amount of peat fuel produced in 1943 was insignificant but it is anticipated that the production of approximately 10,000 tons may be reached in 1944.

Expenditures for these purposes since the inception of the Board up to the end of 1943, amounted to \$4,624,908.

**Coal Production.**—Production in 1943 was 5 p.c. lower than that of 1942. The average price per ton, which had been \$3.63 in 1928, had dropped to \$3.02 in 1933, and was about \$3.49 in 1943. Alberta was the leading producer. The coal produced in Nova Scotia, New Brunswick and British Columbia is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only.

### 19.—Production of Coal in Canada, by Provinces, 1926-43

NOTE.—Figures for the years 1874-1910, inclusive, will be found at p. 419 of the 1911 Year Book, and for the years 1911-25 at p. 348 of the 1939 edition.

<sup>1</sup> Subject to revision.

**Coal Consumption.**—The sources of coal consumed in Canada in the calendar years 1926-42 are shown in Table 22, detailed figures of coal *made available for consumption* in 1942 and 1943 are given in Table 23; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

## 22.—Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, 1926-42

NOTE.—Figures for the years 1886-1910, inclusive, will be found at p. 354 of the 1921 Year Book, and for the years 1911-25 at p. 350 of the 1939 edition.

## Subsection 2.—Natural Gas and Petroleum

**Natural Gas.**—The producing wells in Eastern Canada are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost, Bow Island and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1943, Alberta was credited with over 52 p.c. of the total value and nearly 80 p.c. of the total quantity, while Ontario produced over 44 p.c. of the value and over 18 p.c. of the total quantity.

## 24.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, 1926-43

NOTE.—For the years 1892-1919, see the Annual Report on the Mineral Production of Canada, 1928, p. 188; for 1920-25, see p. 347 of the Canada Year Book, 1940.

<sup>1</sup> The barrel equals 35 imperial gallons.

<sup>2</sup> Subject to revision.

Production of petroleum from the Turner Valley and other Alberta fields has risen from 1,312,368 bbl. in 1936 to 9,958,000 bbl. in 1943. The principal Ontario oil fields are situated in the southwestern peninsula between Lake Huron and Lake Erie. The maximum production of these fields was reached in the '90's and has since declined. New Brunswick's small production comes from the Stony Creek field near Moncton. For the production by provinces in 1942, see Table 6, p. 297.

*The Development of Oil Production in the Northwest Territories.\**—An important development in the oil production of 1942 was the exploratory drilling program undertaken in the vicinity of Norman Wells in the Mackenzie District of the Northwest Territories in connection with the Canol Project. Oil was first obtained from two wells drilled in this area in 1920 and 1925, respectively, but as no market was found for the oil, the wells remained capped for several years. The discovery of radium-bearing and silver ores in the Great Bear Lake region in 1930, and subsequent development of the 'finds' led to a demand for oil products and was further intensified by large-scale developments in the Yellowknife region following the gold discoveries of 1935.

The shipment of oil and gasoline to the mines at Great Bear Lake commenced in 1932, and in 1937 a pipeline was laid along the south bank of Great Bear River for a distance of about eight miles to obviate the portaging of oil around a series of rapids. Additional wells were drilled in the Norman area in 1939 and 1940 and in 1939 a new refining plant was installed at Norman Wells for the production of aviation gasoline and improved fuel oil products, which resulted in a substantial reduction in the price of petroleum products in the region.

The Canol Project is a joint defence undertaking authorized by an exchange of notes between the Governments of Canada and the United States involving: (1) a program of development designed to increase the production of oil in the Northwest Territories to supply the requirements of the Armed Forces in Canada and Alaska and for use along the Alaska Highway; (2) the construction of a pipeline to convey crude oil from Norman Wells to Whitehorse, Yukon Territory; and (3) the erection of an oil refinery at Whitehorse.

Under the terms of the agreement between the two Governments the United States is paying the costs of the project and the Canadian Government is providing sites for structures and rights of way essential to the project, and is also making oil rights available under appropriate regulations. Royalties on oil produced under this project are also waived for the duration of the War. The United States retains ownership of the pipeline and refinery until the end of the War, at which time they will be offered for sale, with the Canadian Government being given prior right of purchase.

Construction work on the Canol Project proceeded through 1942 and 1943. By Jan. 1, 1944, a total of 32 wells had been completed in the Norman field by the Imperial Oil Company, Limited, under contract with the United States Government. Of these wells, 25 yielded oil in commercial quantity. In addition to the new wells,

\*Prepared by R. A. Gibson, Deputy Commissioner, Administration of the Northwest Territories, Ottawa.

there are four drilled prior to the Canol agreement, making a total of 29 producing wells in the region. Although it has not been possible to measure production accurately owing to lack of adequate storage facilities, the potential production of the new wells is estimated to be well in excess of the capacity of the pipeline, which is rated at 3,000 bbl. daily. The welding of the pipeline was completed in February, 1944, and, according to schedule, the erection of the refinery should be completed by June, 1944.

## Section 6.—World Production of Minerals

Complete figures of world production of such metals as copper, lead and nickel are not available for the war years. Figures for 1938 will be found in the 1942 edition of the Year Book under the respective subsections.

**Gold.**—The modern phase of gold mining is contemporaneous with the discovery of gold in the Transvaal and the introduction of the cyanide process. World production was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 22,847,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,497,000 fine oz. in 1922. However, the notable decline in general commodity price levels that occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with a distinctly upward trend thereafter throughout the 1920's. The increased price of gold since 1930 has accelerated the expansion in world production during recent years and all previous records have been exceeded.

### 26.—Quantities and Values of World Production of Gold, 1891-1942

						1942.....	2	2

<sup>1</sup> At \$20.67 + per oz. fine prior to 1934; at \$35 per oz. fine for 1934 and later years. <sup>2</sup> Since figures for many countries are not available, world totals have not been published by the Director of the United States Mint.

The world's chief producers are the Union of South Africa, Canada, the United States and U.S.S.R. (Russia). Australia, Rhodesia, British West Africa and British India are also important producers; over half of the world production comes from mines in the British Empire.

## 27.—Quantities and Values of the World Production of Gold and Silver, by Principal Countries, 1941 and 1942

NOTE.—Abridged from the Annual Report of the Director of the United States Mint; many of the figures are estimates, the sources of which are given as footnotes to the U.S. Mint table. It is not possible to obtain official figures or even reliable estimates for many countries, mainly European, during the war, and world totals have therefore been omitted.

<sup>6</sup> 1940 figure.

<sup>7</sup> Data incomplete; world totals omitted.

**Silver.**—The silver production of Canada in 1942 was 20,695,101 fine oz., which placed Canada next to Mexico and the United States in the production of this metal.

In Table 28 the world production, value and average price of silver are given for each year from 1900 to 1939. In spite of the decreasing importance of silver, except in China and India, production has increased due to the fact that silver is a by-product in the mining of other metals.

## 28.—Quantities and Values of World Production of Silver, with Annual Average Prices, 1900-42

(From the Annual Report of the Director of the United States Mint)

NOTE.—Figures for the years 1860 to 1899, inclusive, will be found at p. 346 of the 1939 Year Book.

Year	Quantity	Value	Average Price per fine oz. <sup>1</sup>	Year	Quantity	Value	Average Price per fine oz. <sup>1</sup>	Year	Quantity	Value	Average Price per fine oz. <sup>1</sup>

<sup>1</sup> At the average par price of a fine ounce of silver in London, excepting the years 1918-22, inclusive, and 1931-42, for which the means of the New York bid and asked prices were used. <sup>2</sup> Since figures for many countries are not available, world totals have not been published by the Director of the United States Mint.

**Coal.**—The total estimated coal production of the world in 1938, the latest year for which complete figures are available, amounted to about 1,420,000,000 long tons, a decrease of 6 p.c. from the estimate for the previous year. Germany, which has run second to the United States for each year since 1925, accounted for 26.4 p.c. of world production in 1938; the United States, 24.6 p.c.; and the United Kingdom, 16 p.c. Canada contributed 12,763,000 long tons or about 0.9 p.c. Figures of coal produced in the principal countries of the world in 1913 and 1926-39 are given at p. 310 of the 1942 Year Book.

## Section 7.—Production of Non-Metallic Minerals (Excluding Fuels)

The most important Canadian minerals included in this group are asbestos, gypsum, quartz, salt and sulphur, and for each of these a brief description of occurrence and production follows. A reference to Table 2 at p. 292 and Table 6 at p. 297 shows numerous other minerals, used chiefly for chemical and industrial

purposes, which are classified under this group. Among these may be mentioned feldspar, graphite, iron oxides (ochre), magnesitic dolomite, mica, nepheline-syenite, silica brick, sodium sulphate, talc and soapstone. Statistics of production for recent years of these and other minerals of lesser importance appear in the tables mentioned above.

**Asbestos.**—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production was much curtailed from 1929 to 1932, as will be seen from Table 29. However, since 1932, production has shown a distinct improvement. Production (mine sales) of asbestos in Canada during 1943 totalled 427,141 short tons valued at \$21,738,686, compared with 439,459 short tons worth \$22,663,283 in 1942. Other leading countries producing relatively large quantities of asbestos are Russia, Southern Rhodesia, Union of South Africa, United States, and Cyprus.

The Eastern Townships of Quebec have for many years been the most productive asbestos-mining area in the world. The veins of chrysotile asbestos vary in width from  $\frac{1}{4}$  inch to  $\frac{1}{2}$  inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted to spinning. Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. Some development work has been conducted on an asbestos property at Rahn Lake, Bannockburn Township, Ontario. The increasing demand for short grades of fibre for use in newly developed asbestos-cement products and in moulded plastic articles are developments favouring the Canadian market.

The world's largest market for asbestos is in the United States, and Canada's proximity to this market is a very real advantage to the asbestos industry in this country. Since September, 1939, the export of asbestos has been controlled by the Dominion Government.

## 29.—Quantities and Values of Asbestos Produced in Canada, 1926-43

NOTE.—Figures for the years 1896-1910, inclusive, will be found at p. 424 of the 1911 Year Book and for the years 1911-25 at p. 354 of the 1939 edition.

**Gypsum.**—The production of gypsum, which is entirely dependent on the building industry, has shown a definite decline during 1942 and 1943. Although the use of gypsum products in the building trade has made rapid progress because of their lightness, durability and their fire-resisting and acoustic properties, it is probable that production for domestic use will continue to decline during the war

years. Gypsum is exported from Canada almost entirely in crude form and goes mainly to the United States for manufacture into gypsum products. Industrial conditions in that country and transportation facilities will continue to have an important bearing on the industry.

### 30.—Gypsum Produced in Canada, by Provinces, 1926-43

NOTE.—Figures for the years 1886 to 1925 are given at pp. 256-257 of the Annual Report on the Mineral Production of Canada, 1927.

<sup>1</sup> Subject to revision.

**Quartz.**—This term is used to cover the production of crude and crushed dyke quartz, quartzite, sandstone, and natural silica sands and gravels. Production by provinces in 1942 is given in Table 6, p. 298. Silica production in Nova Scotia is used largely for the purpose of making silica brick in steel plants. In Quebec high-grade silica sands are produced for the manufacture of glass and chemicals, for sand blasting and for various other purposes, while in Ontario crushed quartzite or sandstone is produced for the manufacture of silica brick and ferro-silicon. Large quantities of low-grade natural silica sands and gravels are produced in Ontario and Saskatchewan for use as non-ferrous smelter flux.

**Salt.**—In 1943 salt was produced in Nova Scotia, Ontario, Manitoba and Alberta and of the total Canadian production Ontario contributed 608,233 tons or 87 p.c. Statistics of Canadian salt production represent the recovery of the mineral from brine wells with the exception of Nova Scotia where the output comes entirely from the underground mining of rock salt deposits. The quantity and value of Canadian salt produced in 1943 are the greatest ever recorded.

Of the total salt sold or used by producers in 1943, 351,917 tons, or 50 p.c., was consumed directly by the producers themselves in the manufacture of caustic soda and other chemicals.

**Sulphur.**—Sulphur production statistics as published by the Dominion Bureau of Statistics represent the quantity and value of sulphur contained in iron pyrites shipped plus the quantity and value of sulphur reclaimed for acid manufacture, etc., from smelter fumes. As thus defined, the commercial output of sulphur in Canada during 1943 totalled 261,372 short tons valued at \$1,758,538 compared with 303,714 tons worth \$1,994,891 in 1942. Production in 1943 comprised 144,767 tons of sulphur in iron pyrites shipped and 116,605 tons recovered from smelter gases. Output by provinces was: Quebec, 141,400 tons valued at \$565,552; Ontario, 16,779 tons at \$167,990; and British Columbia, 103,173 tons at \$1,024,996.

Sulphur is used in Canada chiefly in the production of sulphide pulp and for use in the making of artificial silk and newsprint. It is used to a large extent also in the manufacture of sulphuric acid, explosives and rubber and in the production of fertilizers.

### Section 8.—Production of Clay Products and Other Structural Materials

Statistics in this section include the output of those firms engaged in the production of clay products, Portland cement, lime, sand, gravel and stone, and the production of these materials is naturally dependent upon the activity of the construction industry as a whole. The output of such materials attained an all-time high value of \$58,534,834 in 1929; however, the output of structural materials suffered severe annual declines throughout the depression period of the early 1930's. The construction of defence projects since 1939 has resulted in a very pronounced expansion in the output of structural materials. In 1942 the combined value of these products totalled \$45,729,807 as compared with \$35,362,759 in 1939. There has been an increasing consumption of stone and lime for other than building purposes. This has been particularly evident in recent years and is the result of expansion in certain industries where these materials are utilized in chemical processes.

**Brick and Tile.**—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Production reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1940, 1941 and 1942, is shown in Table 2 of this chapter, while the production by provinces in 1942 is given in Table 6. The estimated value of all clay products made in 1941 was \$7,575,336 and \$7,081,723 in 1942.

**Cement.**—The cement industry in Canada began with the manufacture of hydraulic or natural-rock cement. Production was probably first obtained at Hull, Que., between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica and alumina. The lime is usually furnished by limestone and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta and British Columbia. As may be seen from Table 32, production declined greatly from 1929 to 1933, but has recovered somewhat since then. Erection of new plants and office buildings for war-time service, together with the construction of air training centres and other military projects, has greatly stimulated production in the past three years. Production by provinces in 1942 is given in Table 6, p. 299.

### 32.—Production, Imports, Exports and Apparent Consumption of Portland Cement, 1926-43

NOTE.—Figures for the years 1910-25, inclusive, will be found at p. 356 of the 1939 Year Book.

<sup>1</sup> 'Production' as used here means quantity and value of sales.  
350 lb. or 3½ cwt.

<sup>2</sup> The barrel of cement equals

**Sand and Gravel, and Stone.**—The Mining, Metallurgical and Chemical Branch of the Bureau of Statistics presents details of production and organization of the stone industry separately from that of sand and gravel, but for the sake of brevity they are here discussed together. However, the figures of stone production shown do not include the limestone used to produce lime and cement, nor the quartz and other rock minerals, which are shown separately in Table 2, p. 293. The production of these materials increased greatly up to the world depression that began in 1930. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased by 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply, but since 1933 there has been some recovery. Among the developments in Canada that resulted in increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated at p. 323, by a decline in brick production and an increase in that of cement; (2) the extensive improvement during that period in the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1942 production of sand and gravel, and stone, is shown in Table 6, p. 299, while the chief purposes for which these materials were produced are shown in Table 33.

The quantities and values of stone produced, given in the following table, represent only the production of those establishments that actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments that buy rough stone and dress, polish or finish it; although dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production.

## Section 1.—Water Power

Canada's basic geological formations and their superimposed topographical features have resulted in a fresh-water area officially estimated at 228,307 square miles. This is larger than the fresh-water area of any other country and more than double that of the whole land area of Great Britain and Ireland. As all of this fresh-water area is above sea-level, and much of it at considerable altitudes, its outflow in its descent to the sea creates sources of potential energy at every rapid and fall along its course. By what may be regarded as a special dispensation of nature, more than half of this potential power occurs in that section of Canada comprising the Provinces of Ontario and Quebec, which is without commercial fuel deposits and in which is concentrated approximately 85 p.c. of the industrial development of the Dominion.

In war as in peace, water power is the mainspring of Canada's industrial success. The products of Canada's war industry, the output of which was designed to reach a peak value of \$3,700,000,000 during 1943 and which is so great that only 30 p.c. is allocated to the Canadian Armed Forces at home and abroad, have been used in every battle since Dunkirk—in the Philippines, in Greece, Crete, Russia, China, North Africa and the Middle East. The production of the essential constituents of these munitions—aluminum, copper, steel, zinc, nickel, lead and chemicals—and the conversion of these and many other materials into implements of warfare, are powered almost entirely by hydro-electricity generated by Canada's abundant and strategically located water powers. The peace-time utilization of these water powers had enabled Canada to advance from an agricultural economy to that of the third greatest manufacturing country in the British Empire and provided, upon the outbreak of hostilities, a reserve of power and an industrial background for the rapid development of a great munitions industry.

### Subsection 1.—Water-Power Resources of Canada and Their Utilization

An extensive discussion of Canada's water-power resources, a comparison of these resources with those of other countries and of problems in the development, distribution and merchandising of power is included in the 1940 Canada Year Book, pp. 353-364.

\* In this chapter of the Year Book all information respecting power generation and utilization in Canada is co-ordinated; some sections, however, cannot be regarded as complete owing to the insufficiency of available data. Section 1 has been revised under the direction of V. Meek, Controller, Dominion Water and Power Bureau, Surveys and Engineering Branch, Department of Mines and Resources, and Sections 2, 3 and 4 (except as otherwise stated) by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

<sup>1</sup> Revised in 1942. The substantial increases result from a very complete revision of the figures for British Columbia.

The figures listed in the first and second columns of Table 1 represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop or the head possible of concentration has been measured or at least carefully estimated. Many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams from coast to coast. These will become available for tabulation only as more detailed survey work is completed; this is particularly true in the less-explored northern districts. Also, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, unless definite studies have been carried out and the results made matters of record.

The third and fourth columns give the total capacity of the water wheels actually installed throughout the Dominion; these figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources developed. The water-wheel installation throughout the Dominion averages 30 p.c. greater than the corresponding maximum available power figures for developed sites calculated as in the second column. The above figures, therefore, indicate that the *at present recorded water-power resources* of the Dominion will permit of a turbine installation of more than 51,350,000 h.p. In other words, the turbine installation at Dec. 31, 1943, represents slightly less than 20 p.c. of the present recorded water-power resources and the figures in the first and second columns may be said to represent the *minimum water-power possibilities* of the Dominion.

### Subsection 2.—Statistics of Water-Power Development

**Growth of Water-Power Development.**—The inception of long-distance transmission of electricity about the beginning of the present century rendered practicable the development of water-power sites remote from the point at which the power was to be utilized. This resulted in the hydro-electric central station installation increasing from 33½ p.c. of the total hydraulic installation at Jan. 1, 1900, to 90 p.c. at Jan. 1, 1944. The growth of hydraulic installation during the

period 1930-43 is shown in Table 2, attention being called to the increased installation since the outbreak of war. In addition to the increase in power resulting from the adding of generating equipment to plants not completely installed, and the building of new generating stations, much additional power was provided by greater diversion of water at Niagara Falls, by the continuance of daylight saving throughout the winter months, by the transference of secondary power to primary uses and by many other methods.

The outstanding development of the year was the completion, in the Province of Quebec, of the great Shipshaw power station of the Aluminum Power Company where turbines of a total preliminary rating of 1,020,000 h.p. were installed with the final tests being expected to show a considerably higher rating. The installation of this plant is almost double that of the next largest Canadian development and, in conjunction with the other Saguenay River developments of the Aluminum Power Company and the Saguenay Power Company, provides power for the immense aluminum industry at Arvida.

## 2.—Hydraulic Turbine Horse-Power Installed in Canada, by Provinces, as at Dec. 31, 1930-43

NOTE.—Comparable statistics for the years 1900-19, inclusive, are given at p. 361 of the 1939 Year Book and those for 1920-29 at p. 364 of the 1940 Year Book.

1943.....	2,617	133,384	133,347	5,847,322	2,673,443	422,825	90,835	94,997	796,024	10,214,513

<sup>1</sup> Includes Yukon and the Northwest Territories. Turbine horse-power in Yukon was 13,199 from 1925 to 1934, and 18,199 from 1935 to 1942; the removal of a plant of 3,180 h.p. reduced this figure to 15,019 h.p. in 1943. In 1941 a 4,700-h.p. plant was installed in the Northwest Territories.

**Analysis of Total Hydraulic Power Installations.**—For the purpose of this review the present total installation of 10,214,513 h.p. is divided in Table 3 under three main headings: central electric stations, pulp and paper mills and installations in other industries.

The largest and most rapidly growing of these classes, viz., central electric stations (a detailed survey of which is included in Section 2) totalling 9,221,599 h.p., represents slightly more than 90 p.c. of Canada's present development and produces 98 p.c. of all electricity sold in or exported from Canada.

The pulp and paper industry has a hydraulic installation of 642,576 h.p. and

is the largest individual purchaser of central station power, buying as much as 50 p.c. of all power sold for industrial purposes.

The "other industries" group has a hydraulic installation of 350,338 h.p. and provides a broad market for central station power.

A definite estimate of the amount of power being used in the war effort is very difficult to secure but it is probably a conservative statement to say that more than one-third of Canada's hydro-electric output is supplying power for this purpose.

<sup>1</sup> Includes only hydro-electric stations that develop power for sale. <sup>2</sup> Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations totalled in the first column, aggregating approximately 1,370,000 h.p., making a total of almost 2,020,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also normally purchased for use in electric boilers rated at more than 1,750,000 h.p. Most of this is now diverted to primary war uses. <sup>3</sup> Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations totalled in the first column. <sup>4</sup> All water wheels and hydraulic turbines installed in Canada.

The figures of turbine installation, given in Table 3, must not be placed in direct comparison with those of the annual central electric station census nor those of the census of the pulp and paper industry, because of the different bases of compilation. The figures of hydraulic installation represent the cumulative totals of installation for the purposes named, adjusted by deducting the capacity of installa-

tions removed because of obsolescence or for other reasons. The Census of Industry data are computed on a different basis, representing only the sum of the installation in the plants actually in operation during the year dealt with at the census and not total installation. Also, data on installations are available as soon as equipment is installed, whereas census data are not available until some time after the end of the period.

## Section 2.—The Central Electric Station Industry in Canada

**Government Control of Power in War-time.\***—Primary power production has been greatly increased to meet the rapidly growing requirements of war industries. During the four-year period, September, 1939, to September, 1943, primary power produced for use in Canada increased 84 p.c. This greatly increased production of electricity resulted from new developments, additional equipment in existing plants, and from increased diversion of water for power purposes at Niagara Falls. Secondary power, which was used largely in electric boilers of the pulp and paper mills, was reduced by 67 p.c., and instead of constituting 25 p.c. of the total output of central electric stations it was only 5.4 p.c.

In August, 1940, a Power Controller in the Department of Munitions and Supply was appointed with jurisdiction over "hydraulic, electrical, steam, gas or other power". Subsequently, a number of measures were effected to conserve power. The use of power for generating steam was prohibited. Daylight saving was made

\* Compiled from material furnished by the Department of Munitions and Supply and the Wartime Prices and Trade Board.

applicable all the year round in the Provinces of Ontario and Quebec for those communities that had observed daylight saving in the summer of 1940, and subsequently was extended throughout Canada. Extension of power systems to rural areas was curtailed. In certain areas, some non-war industries were obliged to reduce takings during peak hours. In central areas all power systems were interconnected so as to permit excess power in any area to be used where there is a deficiency. Until the fall of 1942 these measures were successful in coping with the situation, but a serious deficit in the "power shortage areas" necessitated a substantial curtailment of domestic and commercial use and an enforced reduction of output in the paper industry.

In September, 1942, as the potential power shortage became more acute, the Power Controller prohibited the use of electricity for advertising signs, show windows, decorative purposes, certain outdoor lighting, and many other less essential uses; he appealed to the public to reduce domestic consumption and embarked on a broader policy of denying power to non-war industries.

#### Summary of Energy Generated by Type of Station, 1941 and 1942.—

Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz., (1) commercial—those privately owned and operated by companies or individuals, and (2) municipal—those owned and operated by municipal or provincial governments. These are subdivided according to the kind of power used into (a) hydraulic, (b) fuel, and (c) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with around 88 p.c. of the total capacity of hydraulic installations in all industries in Canada and the generators driven by this hydraulic equipment generate 98 p.c. of the total output of all central electric stations.

#### 4.—Electric Energy Generated, by Type of Station and by Provinces, 1941 and 1942

## Subsection 1.—Historical and General Statistics

The growth of the central electric stations industry, has been almost continuous since 1919, when statistics of kilowatt hours generated were first made available. The depression that occurred in the early 1930's resulted in decreased output of power for several years but output soon recovered, the increases in 1940 and 1941 being particularly large, owing to the effect of the War on production.

The central electric stations industry is one that is particularly suited to large-scale operation, because of the huge outlays of capital necessary. Capital invested and total horse-power installed increased almost continuously even during the depression years, mainly because large power projects, planned before the depression, were in process of construction during the early years of the past decade. Off-peak and surplus power, used mainly in electric boilers of pulp and paper plants, grew steadily to a peak of 7,803,000,000 kwh. in 1937 but owing to war requirements for firm power it was reduced in 1940-43, and amounted to only 3,229,426,000 kwh. in 1943.

## 5.—Summary Statistics of Central Electric Stations, 1930-42

NOTE.—Figures for the years 1917 to 1929 will be found at p. 369 of the 1940 Year Book.

<sup>1</sup> Excluding duplications.

<sup>2</sup> Not including auxiliary-plant equipment.

<sup>3</sup> Revised since the publication of the 1942 Year Book.

Although the amount of power used by domestic customers or for residential purposes has been between only 4 and 6 p.c. of the total production of central electric stations, this service is exceedingly important. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct Dominion, provincial and municipal taxes on such service, are shown in Table 6. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces; there are smaller differences between the average bills.

**Equipment of Central Electric Stations.**—Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or spare hydraulic equipment in hydraulic stations. Such equipment is classed as main-plant equipment. The capacities of the equipment are the manufacturers' ratings and for water wheels and turbines vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality in each case.

**7.—Main-Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1941 and 1942**

NOTE.—kva. means kilo-volt-amperes.

**Farm Service Furnished by Central Electric Stations.**—A complete segregation of farm customers from other domestic customers is not made by all central electric stations. For 1930 only Ontario and Quebec stations reported farm customers almost equal in number to the farms supplied with electricity as recorded in the census.

## Subsection 2.—Public Ownership of Central Electric Stations\*

Rivers and lakes, except very small ones, generally remain vested in the Crown and, naturally, the use of the water for development of power is a Crown right.

In some places in Canada the Crown has transferred this right to incorporated companies and in others the Crown itself has exercised the right and developed the water-power sites. Ontario was the first province to develop and distribute hydro-electric power. With one of the largest and most spectacular power sites in the world, at Niagara Falls, and with no coal mined in the Province, the urge to produce hydro-electric power was great. In 1906 a commission was formed to act as trustee for the municipalities in producing and distributing electric energy in the Province.

\* The information included under the provincial headings of this subsection has been revised by the various provincial commissions or authorities concerned.

In Quebec public ownership has not made much headway. Perhaps one reason for this is that power development there has been closely associated with the pulp and paper industry, which was established as a commercial enterprise.

The development of electric energy in New Brunswick also has been largely connected with the production of pulp and paper, and commercial companies still control a great deal of the power, although the New Brunswick Power Commission, established in 1920, has since organized public utility services on the same lines as those of Ontario, providing both hydro-electric and thermal-electric power. Nova Scotia, Saskatchewan and Manitoba also have established hydro-electric commissions on the model of the Ontario system.

In British Columbia the population is concentrated around the Fraser Delta and Victoria. Hydro-electric power to serve their needs has been developed mainly by private corporations although smaller public utility corporations have contributed to some extent.

Table 11 shows statistics of municipally or publicly owned central electric stations, by provinces, for 1941 and 1942. Table 18 at p. 344 shows comparable statistics for commercial stations.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies, their general regulations and their activities are summarized by provinces.

**Nova Scotia.**—In 1909 legislation was first enacted in Nova Scotia relating to the use of water power in "An Act for the Further Assisting of the Gold Mining Industry". This was the most advanced legislation until the development of water power within the Province of Nova Scotia was initiated under the Acts of 1914 and carried on in an investigatory manner in co-operation with the Dominion Government until 1919 when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Dominion Government through the Dominion Water and Power Bureau with which the Nova Scotia Power Commission is closely associated. The control of the water resources of the Province is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function and policy of the Commission is the supply of electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service. It provides for financial assistance to equalize cost and revenue of extensions, the construction of which have been approved by Governor-in-Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission, subject to approval of the Governor-in-Council, to regulate and control the generation, transformation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1943, showed fixed assets of \$17,575,959, work in progress \$49,528, current assets \$360,570, contingency and renewal reserves \$1,614,451, sinking fund reserve \$3,134,691 and a general reserve of \$251,863.

The initial development of the Commission was an 800 h.p. installation on the Mushamush River, which went into operation in 1921 and delivered 192,000 kwh. in the first complete year of operation. This and later developments are shown in the following statement.

I.—PRESENT DEVELOPMENTS WITH INITIAL CAPACITIES OF UNDERTAKINGS OF THE NOVA SCOTIA POWER COMMISSION

Development	Year in which Operations Commenced	Installed Capacity		Annual Output (Generation)

Totals.....	—	—	77,924	—	219,908,515	262,996,729

<sup>1</sup> Minimum head.      <sup>2</sup> Non-generating.      <sup>3</sup> A 1,200-h.p. development went into operation on the Markland System in 1943.      <sup>4</sup> Distribution system only.

The nine systems comprise 1,475 miles of transmission and distribution lines and served 32 wholesale and 6,145 retail customers at Nov. 30, 1943. Nineteen generating stations and 38 generating units are in service with a total installed capacity of 77,924 h.p. and a total delivery to customers which is somewhat variable and has reached 249,449,505 kwh. per year.

**New Brunswick.**—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. The Commission owns and operates the generating stations shown in Statement II.

II.—PLANTS OF THE NEW BRUNSWICK ELECTRIC POWER COMMISSION

Plant	Type	Capacity
		h. p.
Musquash.....	Water power.....	11,000
Grand Lake.....	Steam.....	26,800
Kouchibouguac.....	Water power.....	200
Grand Manan.....	Diesel.....	200
St. Quentin.....	Diesel.....	125
Total.....		38,325

Power is also purchased and distributed directly by the Commission in every county of the Province to various towns, villages and rural communities. The Commission operates 24 rural distributing systems supplying 19,300 customers, and has important industrial power loads variously situated.

The Musquash, Grand Lake and Kouchibouguac plants are inter-connected and operate in parallel at all times.

*Transmission Lines.*—The transmission system consists of a 66,000-volt line from Musquash to Moncton; and five lines from Grand Lake, viz., two 33,000-volt lines to Fredericton, one 66,000-volt line to Newcastle, one 66,000-volt line to Moncton, and one 66,000-volt line from Coal Creek to Hampton.

Power is sold *en bloc* to the cities of Saint John, Moncton, Fredericton and the town of Sussex.

The statistical information given below shows the growth of the Commission's undertaking since 1924.

**Quebec.**—The National Electricity Syndicate, 1937 (Geo. VI, c. 24), was established to develop electricity generating plants and distributing systems in the Province. It was abolished in 1940 (Act 4, Geo. VI, c. 22) and its powers, duties, and contractual obligations were then transferred to the Quebec Streams Commission.

*The Quebec Streams Commission.*—Created in 1910 by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., c. 46), by 20 Geo. V, c. 34 and by 4 Geo. VI, c. 22, the Commission is authorized to ascertain the water resources of the Province, to make recommendations regarding their control, to construct certain storage dams and operate them so as to regulate the flow of streams, and to undertake the direct production of electric power. The Commission has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams. In 1941 and at the beginning of 1942, the Quebec Streams Commission completed the construction of a 48,000 h.p. (3 units) generating plant at Rapid 7 on the Upper Ottawa River, at the cost of \$9,600,000 including interest during construction. About 16,000 h.p. has been supplied to the Noranda Mines since Oct. 18, 1941. A fourth unit is to be installed when warranted and when the flow of the drainage area above Rapid 7 has been regulated.

From 1912 to 1925, storage reservoirs were built or acquired and operated by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since

1925, companies or persons have availed themselves of the latitude given them by R.S.Q., 1925, c. 46, s. 6, to build the necessary dams. Such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons.

There were 17 storage reservoirs in 1943, which have been built and are controlled by the Commission in Quebec. Among the rivers controlled by the Commission either by means of dams on the rivers themselves or by controlling the outflow of lakes at their headwaters, together with the horse-power now developed, were: the St. Maurice, 1,026,050 h.p.; the Gatineau, 504,000 h.p.; the Lièvre, 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, 41,400 h.p.; and the Au Sable, 33,200 h.p. Most of these developments are capable of being extended to produce more power than is now installed.

Other storage reservoirs operated by the Commission are the Lake Métis Reservoir, the Savane River and Lake Brulé Reservoirs on Ste. Anne de Beaupré River and three small reservoirs on North River.

Among storage reservoirs not controlled or operated by the Commission, are the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonka River, and the Onatchiway on the Shipshaw River. Power developments on the Saguenay River, benefiting from the Peribonka and Lake St. John Reservoirs will amount to over 1,500,000 h.p. when the Chute-à-Caron (Shipshaw) project is completed.

*The Public Service Board.*—The Board is an arbitration, supervisory and controlling body for public services and public utility enterprises. In addition to its control over transportation and communication, its functions in the electrical field include the powers of the former Quebec Electricity Commission, viz., jurisdiction over the production, transmission, distribution and sale of electricity in the Province of Quebec and wide powers respecting service, equipment, apparatus, means of protection, extensions of plant and systems, as well as control of rates and capitalization. The Board also has supervisory and advisory functions under the Electricity Municipalization Act, which enables municipal corporations to establish electricity systems. The Board may recommend subsidies of 50 p.c. of the capital cost of rural electrification systems, to be paid from provincial funds, and, furthermore, loans of 25 p.c. of such capital cost for a period of 30 years, with interest at 4 p.c.

**Ontario.**—*The Hydro-Electric Power Commission.*—An account of the inception and operations of the Commission is given at pp. 377-378 of the 1940 Year Book.

To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately owned generating plants. Of the 46 hydro-electric power plants operated by the Commission in 1942, the largest is the Queenston-Chippawa development on the Niagara River, which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for present needs has been made—including existing plants and power under contract for present delivery—up to an aggregate of about 2,544,000 h.p., of which 62,500 will be discontinued after the War.

*Hydro-Electric Power Commission Statistics.*—The Annual Reports of the Commission present in great detail descriptions and statistics of operation, construction, municipal work and transmission and distribution. The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner-municipalities.

The initial capital expenditure required to serve about twelve municipalities amounted to approximately \$3,600,000. At Oct. 31, 1942, the total capital investment amounted to \$483,333,025, of which \$354,867,278 were investments by the Commission in generating plants, transmission systems, etc., including electric railway and other properties operated by the Commission for the major systems under their control and \$128,465,747 were investments by municipalities in local distributing systems of their own, including other assets. Similarly, total reserves of the Commission and of the municipal electrical utilities for sinking fund, renewals, contingencies and insurance purposes amounted to \$289,473,996 of which \$182,504,711 represented reserves of the Commission and \$106,969,285 of the municipalities.

### 13.—Growth of the Ontario Hydro-Electric Power Commission, Years Ended Oct. 31, 1930-42

NOTE.—Statistics for 1910-29 are given at p. 288 of the 1941 Year Book.

<sup>1</sup> Included in Niagara System.

*Statistics of Urban Municipal Electrical Utilities of Ontario Supplied by the Commission.*—Statistics of the assets and liabilities of the electrical departments of urban municipalities served by the Hydro-Electric Power Commission show, for 1942, total assets of \$185,566,346, as compared with liabilities of \$21,496,463. Of the difference, \$91,828,309 was allotted as reserves, leaving a surplus of \$72,241,574. In computing the percentage of net debt to total assets, the equity in Hydro systems is not taken into account. Between 1933 and 1942 total assets increased by \$49,787,677 while total liabilities decreased by \$28,424,291.

*Rural Electrical Service in Ontario.\**—During past years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting agriculture—the basic industry—contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Government passed legislation providing for advances up to \$1,000 to actual farm owners of lands and premises in rural power districts for the installation of electrical wiring and the purchase of equipment and providing for the fixing of low maximum service charges for all classes of rural service. For the duration of the War service to non-essential rural service has been suspended, unless this service will increase the production of foodstuffs.

<sup>1</sup> Included in "Capital invested".

**Manitoba.**—The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies and for its transmission and sale to municipalities, corporations and individuals.

The Act was patterned after Ontario legislation governing the Hydro-Electric Power Commission of Ontario and, until 1932, the Commission in Manitoba functioned in much the same way; it owned and operated transmission lines and substations, and sold power in bulk to the municipalities, which took care of the cost of distribution and retailed power to individuals. After 1932 many factors combined to unduly burden the municipalities and the decision was made to serve the consumers direct.

\* Legislation passed concerning rural power is as follows: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act* (R.S.O., 1927, c. 59); *The Rural Power District Loans Act*, 1930 (20 Geo. V, c. 14); and *The Rural District Service Charge Act*, 1930 (20 Geo. V, c. 15).

In 1929, the Provincial Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electric energy. The Electrical Power Transmission Act, of 1931, permitted the reorganization of the administration of the Commission by the establishment of a Board vested with additional authority. This Act was amended in 1940 to give the Commission control of its own finances.

The capital invested in the Province by the Commission is approximately \$8,000,000. At the close of the fiscal year 1942 the reserves, as represented by first-class securities, amounted to \$3,482,235.

The Commission enters actively into the appliance merchandising field; it also operates a central steam-heating system and a gas plant at Brandon. As a result of sales and educational policies, together with the economies enforced, the Commission has been able to reduce rates for service progressively and has established a low uniform basic rate for all towns on the network.

*Extension of Facilities to Municipalities.*—The first municipality to make application for power was Portage la Prairie and the construction of a transmission line from Winnipeg was commenced in the autumn of 1919 and completed in August, 1920. Extensions have been made annually with the exception of 1933 but, since the commencement of the War, these have been limited to essential services such as those built to serve all Army and Air Force Training Centres in rural Manitoba. The system now serves 151 cities, towns and villages, and the transmission network comprises over 2,120 circuit miles of lines, providing service for 20,000 customers.

Power is at present purchased from the Winnipeg Electric Company through substations at Fort Garry and Selkirk for towns on the main network and at East Selkirk, Seven Sisters Falls and St. Boniface for distribution to outlying districts.

**Saskatchewan.**—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S. 1940, c. 33) which authorized the Commission to manufacture, sell and supply electric energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy.

The Commission's main system is centred on its generating plant at Saskatoon. North Battleford and Swift Current also have generating plants owned and operated by the Commission. Electric energy is furnished in bulk to the city corporations, which own and operate their own distribution systems. In the town of Battleford electric energy is supplied by the Commission, in bulk, by transmission line from the Commission's plant at North Battleford. In all the municipal corporations on its system (139 in number) the Commission supplies approximately 11,450 individual consumers directly and 15,413 indirectly. In 1942, 1,560 miles of transmission lines were owned and operated.

During the years 1929 to 1942 the Commission purchased certain generating plants, and constructed and purchased transmission lines and also distributing systems in towns and villages. These were improved, enlarged or supplemented. Particulars of acquisitions and constructions are given at p. 291 of the 1941 Year Book; further details are given at p. 382 of the 1940 Year Book. Acquisitions in 1942 include generating plants and distribution systems at Meadow Lake, Kelvington and Rose Valley.

Of the eighteen generating plants owned and operated by the Commission in 1942, those at Saskatoon and North Battleford were steam plants, and the remainder were equipped with compression-ignition engines. The total installed capacity of the generating plants was 32,700 kw. There are no hydro-electric plants in the Commission's system, the primary power being: steam-reciprocating engines 800 h.p.; steam turbines 38,700 h.p.; and internal combustion engines 9,680 h.p. The Commission purchases several blocks of power from, and contracts for the interchange of power with private interests.

The total revenue for the calendar year 1942 was \$1,590,787. Provision has been made for depreciation and replacement reserve to the amount of \$3,168,716. The total plant investment as at Dec. 31, 1942, was approximately \$8,617,455.

Regina and Weyburn, as well as several towns and villages, own and operate municipal plants and distributing systems. There are four private corporations owning and operating electrical generating plants, transmission lines and distribution systems in the Province. Control and regulatory powers regarding franchises for the supply of electric energy and the rates to be charged therefor are conferred upon the Local Government Board by Part III of The Public Utilities Companies Act (R.S.S. 1940, c. 118). The Power Commission is charged with the administration of the Electrical Inspection and Licensing Act (R.S.S. 1940, c. 261), and is given certain control and regulatory powers regarding electrical public utilities under Part III of the Power Commission Act.

<sup>1</sup> The Commission's operations in the two towns served commenced in November, 1929.

<sup>2</sup> Information not available.

<sup>3</sup> The Commission's operations in most of the municipalities served did not commence until near the end of the year.

**Alberta.**—Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has general power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

Two privately owned utilities are the chief sources of power for the municipalities. One has in operation four hydro-electric power plants totalling 91,000 h.p. on the Bow River and tributaries west of Calgary, with supplementary storage at Lake Minnewanka and Upper Kananaskis Lake totalling 240,000 acre feet. It operates, under lease, the city of Calgary's 14,000 h.p. steam plant, and has interchange arrangements and transmission line ties with the city of Edmonton and the city of Lethbridge. The other is located at the city of Drumheller, its power being generated by steam and it services a large number of towns to the north and northeast of Drumheller; in some communities not accessible to its lines, it operates individual diesel-engine plants.

Edmonton generates power from coal and operates its own distribution system; in addition, there is a reciprocal arrangement with one of the privately owned utilities for exchange of power at peak periods. Calgary and Red Deer own their distribution systems but purchase power from the same private source as Edmonton. Certain other large cities and towns such as Medicine Hat and Cardston own their power plants and those beyond reach of the two private utilities referred to above are served by small privately owned power plants.

**British Columbia.**—Public ownership of central electric stations in the Province of British Columbia is limited to municipalities incorporated under the Municipal Act and to improvement districts incorporated under the provisions of the Water Act. Several cities have installed their own generating stations mostly driven by water power but the majority purchase the energy at wholesale rates from privately owned systems and distribute the energy in their respective areas.

The Public Utilities Commission regulates the rates charged by privately owned utilities but not those owned by municipalities.

### Subsection 3.—Private Ownership of Central Electric Stations

Summary statistics of privately owned central electric stations are given for the years 1929 to 1942 in Table 17.

17.—Privately Owned Central Electric Stations in Canada, 1929-42

1942.....	428	985,059	28,177,387	6,099,440	6,269,886

<sup>1</sup> Exclusive of auxiliary equipment.

The predominant position of Quebec in the electric-power field can be seen from the column in Table 18 showing electric energy generated. Of the total power generated in Canada by all central electric stations 53 p.c. was generated by privately owned or commercial stations in the Province of Quebec; practically all of this amount was hydro power.

There are two important factors in this large production of hydro-electric power in Quebec: (1) the pulp and paper mills, located close to both the water power and the supply of pulpwood, which take around 40 p.c. of the Quebec hydro-electric power; and (2) the industries in eastern and southern Ontario that import around 18 p.c. of the Quebec output of power.

All stations in Ontario produce only about one-half as much power as the Quebec stations and only 25 p.c. of the total for Ontario stations is produced by privately owned stations.

<sup>1</sup> Power generation in Saskatchewan was entirely by fuel plants. There is one hydro-electric station but the power is used in Manitoba and the statistics are included with those of Manitoba.

#### Subsection 4.—Export of Electric Power

Electric energy is exported from Canada only under licence and an export tax of 0.03 cents per kwh. is levied. The export duties for the fiscal years ended Mar. 31, 1940, 1941, 1942 and 1943 were \$443,783, \$560,047, \$598,038 and \$618,953, respectively.

Exports for the calendar years 1940-43 are shown in Table 19. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Quebec to New Brunswick and from British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by 5,000 cu. ft. per second to the Canadian side in November, 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941 a further increase of 9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted. This increased water with greater development of plants on the St. Lawrence River made possible the increased export of both firm and secondary power to the United States, mainly to plants producing war materials (5,000 c.f.s. will produce around 150,000 h.p. at the Queenston, Ont., plant).

## Section 3.—Evolution of Power Equipment and Utilization of Power in Industry

The Dominion Bureau of Statistics has compiled tables showing the power equipment installed in the manufacturing and mining industries of Canada from 1923 to 1941. Table 21 gives the combined statistics for both industries from 1929. The figures for the 13 years show that primary power has increased from 1,680,095 h.p. to 2,185,050 h.p. or by 30.1 p.c. while the installation of electric motors operated by purchased power shows an increase of no less than 82.0 p.c. In considering the increase in the latter figures, it must be borne in mind that the shift from belts and shafting to individual motors at each machine does not necessarily mean that an amount of power is used equivalent to the increased capacity.

Of the increase in primary power installed, manufacturing establishments accounted for 69.8 p.c. and mines for 30.2 p.c., while of the increase in electric motors operated by purchased power, manufacturing accounted for 76.3 p.c. and mining for 23.7 p.c.

The mining industry shows an uninterrupted increase in the amount of equipment operated by purchased power from 1929 to 1941, the steepness of a curve depicting this growth would show no lessening of steepness even during the worst years of the depression. The total amount of power equipment installed showed a drop in 1932, but resumed the upward trend in 1933; the same is true of the capacity of electric motors installed but that of motors operated by power generated within the

establishment dropped sharply from 1930 to 1933 and did not attain a figure equal to the 1930 total until 1937, when a very sharp rise over the 1936 figures occurred. This would indicate a tendency of mining companies to rely more and more upon purchased power rather than to attempt to generate their own, a very natural tendency in northern Canada where water power is abundant and fuels scarce.

In manufacturing, a steady growth is indicated in total power equipment installed, total electric motors and in motors operated by purchased power. In the capacity of motors operated by power generated within the establishment, the figures fluctuated between 1929 and 1935 and from there rose steeply to 1941.

## 20.—Percentage of Electric Rating to Total Power Equipment in the Manufacturing and Mining Industries, 1929-41

NOTE.—Figures exclude central electric stations and include idle and reserve equipment. Figures for 1923-28 are given at p. 295 of the 1941 Year Book.

Year	Total Power Equipment Installed	Electric Power	
		Total Motor Capacity	Per Cent of Total

### Section 4.—Power Generated from Fuel

**Industrial Use of Fuel.**—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam- and internal-combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to materials to facilitate or accomplish a desired transformation are: foundries and machine shops; brick, tile, lime and cement works; petroleum refineries; the glass industry; distilleries; food preparation plants; rubber goods industry; etc. The figures of Table 22 cover fuel used for such heating purposes, as well as for power; they do not include fuels that constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry. Electricity used in metallurgical processes as in the electrolytic refining of non-ferrous metals is also excluded.

The value of fuel consumed in the manufacturing and mining industries in 1941 showed an increase of 29.9 p.c. over 1940. Of the 1941 fuel account, the requirements of Ontario cost 48.7 p.c. of the total, of Quebec 29.3 p.c., of British Columbia 6.7 p.c. and of Nova Scotia 5.3 p.c.

The wood and paper products group used 21.4 p.c., of the fuel consumed by manufacturing industries, iron and its products 19.6 p.c., non-metallic mineral products 18.5 p.c., non-ferrous metal products 14.4 p.c. and vegetable products 10.4 p.c.

## 22.—Fuel Used in Manufacturing and Mining Industries, 1929-41, with Details by Provinces and Industrial Groups, 1940 and 1941

NOTE.—Includes fuel used for heating purposes, but not that used as raw material. Totals for 1922-28 are given at p. 300 of the 1941 Year Book.

This chapter deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries giving a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages, size of establishment, and power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it has been impossible to compile absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now being waged. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those years totalled well over \$1,000,000,000 and these did not include such fields of production as shipbuilding and aviation, which are very important to the present Canadian effort. Shipbuilding construction alone during the First World War amounted to \$35,000,000 in 1917, \$75,000,000 in 1918 and \$86,000,000 in 1919. In the same three years, employees in the shipbuilding industry numbered 12,000, 22,000 and 25,000, respectively.

Canada's effort in the present war has brought manufacturing production to a much higher level than ever before. The following special article reviews the developments that have taken place and the system of controls that have been imposed.

### THE INFLUENCE OF THE PRESENT WAR ON MANUFACTURING

To a much greater extent than in the First World War, Canadian industry has been expanded to meet the needs of the fighting forces of the Allied Nations. Industrial capacity in this country is now (March, 1944) almost three times what it was when hostilities broke out in September, 1939. Scores of new industries have gone into production, and many others engaged in making civilian articles have been diverted to the output of the essentials of war.

However, there has been this difference between industrial expansion in the First and in the Second World Wars: whereas Government control of industry was unthought of in Canada in 1914-18, the experience gained during the inflationary period after that war to 1929, and in the depression of the 1930's, provided the basis for an all-embracing system of controls over the agencies of production and over the consumption of a wide variety of articles.

The present review is divided into two parts as follows: (1) a description of Government control measures over manufacturing, and (2) an outline summarizing the production of the principal munitions of war.

#### Government Control Measures over Manufacturing

War-time control of manufacturing is largely exercised by two authorities—the Wartime Industries Control Board, responsible to the Minister of Munitions and Supply, and the Wartime Prices and Trade Board, responsible to the Minister of Finance. The former body controls the production and distribution of certain basic materials especially placed under the jurisdiction of the Department of Munitions and Supply because of their importance to the war program. The Wartime Prices and Trade Board has authority over the production and distribution of most goods (mainly civilian) not within the sphere of the Wartime Industries Control Board. These two Boards operate through “controllers” and “administrators”, respectively.

**Controls Exercised by the Department of Munitions and Supply\***—The following paragraphs outline a few significant measures of control as they affected some of the more important industrial commodities to Apr. 1, 1944.

*Steel.*—By careful planning, Canada's production of steel has been doubled since war began, and this country is now the fourth greatest steel producer among the United Nations. Although steel was so scarce that for many critical months after the Fall of France the whole Canadian war program was threatened, at no time has the lack of it caused a single, serious interruption of any phase of war production or service. At the close of 1943, with most large-scale construction projects completed, some quantities of certain types of steel were released to fill the gaps in civilian production.

\*Prepared in the Office of the Director of Publicity, Department of Munitions and Supply.

Despite the large increase in production, which now exceeds the average pre-war total of imports plus domestic output, the end of 1943 still saw shortages of end-products which affected every civilian.

*Control.*—On June 24, 1940, the Steel Control of the Department of Munitions and Supply was established. Even though the United States was helping by increasing steel exports, it was found advisable to expand Canadian facilities, and to reduce civilian consumption.

From the very beginning conservation has been achieved largely by control at the source. The rolling schedules at the mills have been supervised in such a way that non-essential orders have been squeezed out. In addition, however, hundreds of thousands of tons of steel have been saved by voluntary and mandatory substitution of less scarce materials, and this has been possible in war, as well as civilian, manufacture.

Immense quantities of steel were saved by the Department of Munitions and Supply through restrictive orders of the Steel Control, and by orders of other Controls. The Supplies Control, which until early in 1942 had jurisdiction over scores of end-products, banned or restricted production of a long list of articles, including washing machines, radios and stoves. In addition, the Wartime Prices and Trade Board cut out the frills of civilian manufacture and, by new and simpler standardized designs for essential articles, saved much steel. Early in 1942, this body took over the control of the metal end-products formerly under the jurisdiction of the Supplies Control, and it thereafter continued the policy of eliminating the manufacture of non-essentials and curtailing the output of many essentials.

*Non-Ferrous Metals.*—Canada is now the greatest base-metal exporting country in the world, and in 1943 achieved the largest output in its history.

After the outbreak of hostilities, in 1939, the metal and mineral production of Canada was made available to the United Kingdom, and contracts provided for the annual shipment of more than one billion pounds of aluminum, copper, zinc, nickel and lead. With the entry of the United States into the conflict, in 1941, it became necessary further to increase production so that substantial quantities of exportable metals could be shipped to that country for its war program.

One of the most notable accomplishments of the Metals Control has been the substitution of less scarce metals for those in shortest supply. But the most striking achievements have been in the production of the light metals, magnesium, and aluminum. At the beginning of 1942, this country had to import magnesium; before the year was out, a Government-owned plant, using a new Canadian process, was producing sufficient to provide for domestic needs and for the export of a substantial quantity. Aluminum production in Canada was not new, but it has expanded more than six times since war began.

*Control.*—On July 15, 1940, the Metals Controller was appointed in the Department of Munitions and Supply. His duties were to regulate the supply, distribution, and use of non-ferrous metals, industrial minerals, and common metal alloys. The Controller immediately restricted the domestic use of aluminum, nickel, zinc, magnesium, tin, cadmium, copper and brass, and later added other non-ferrous metal restrictions. Nearly all these controls were later tightened, but by the beginning of 1944 some relaxations were possible.

*Timber.*—Because of the great and growing importance of wood, Canada's 500,000,000 forested acres take on a new significance. Demands have risen so high that production cannot keep pace, and Canada, one of the richest timber countries in the world, is experiencing a deficit.

At the outbreak of war, the Canadian lumber industry was experiencing a period of reasonable activity but in the summer of 1940, Canada became virtually the only source from which the United Kingdom could obtain supplies of softwoods essential to the prosecution of the War. At the same time the industry was called on to provide the needs of a suddenly expanded Canadian war program.

*Control.*—To meet this emergency, the Department of Munitions and Supply established a Timber Control on June 24, 1940. Almost immediately the specifications for buildings and for all articles made of wood were scrutinized so that the necessary grades might be conserved wherever possible. At the instance of the Control, many types of containers were redesigned by the Forest Products Laboratories of the Department of Mines and Resources, and important savings in lumber and shipping space were achieved. During the first half of 1941, the demand for lumber was sharply reduced, but by mid-summer a second very active period of war building got under way and continued into 1942. The Timber Control has imposed many restrictions to conserve available supplies.

*Rubber.*—On the site of an old Indian reservation, near Sarnia, Ont., a plant owned by the people of Canada is (in March, 1944) turning out 34,000 long tons of buna-S and 4,000 long tons of butyl each year. This output, together with small quantities of neoprene from the United States, the still-essential natural rubber from Ceylon, Mexico, Brazil and Liberia, and goodly supplies of scrap, will be sufficient to provide Canadian war-time requirements if civilian demands are as closely restricted as in the past two years.

As a result of measures adopted by the Rubber Control of the Department of Munitions and Supply, consumption of rubber for civilian purposes in 1943 averaged about 10 p.c. of what it was before the War. Restrictive orders were not alone responsible for this saving of the priceless rubber supply; much of it has been achieved by the use of substitutes and reclaim.

*Control.*—At the beginning of 1944, the situation was this: new, retreated and used tires, and new and used tubes, were rationed, with 120 Rationing Representatives handling equitable distribution to essential users. Crude rubber is permitted only for a continually diminishing list of the most essential articles. On the other hand, the use of synthetic is being steadily and rapidly extended for war and essential civilian purposes.

A Government agency, Fairmont Company Limited, was established on May 16, 1940, and given the authority to purchase, stockpile, and sell crude natural rubber in accordance with existing and subsequent war needs. By the time rubber was placed under the jurisdiction of the Supplies Control of the Department of Munitions and Supply, on Aug. 26, 1941, the Fairmont reserve amounted to 25,000 tons. Later this Crown Company was given a monopoly over buying and selling crude rubber, and arrangements were made for doubling the stockpile. At the same time, the Control began a program of progressive restriction on the use of natural rubber.

When Canada declared war on Japan, things moved fast. Within three days all civilian dealings in new tires and tubes had been prohibited, except by permit. One day later all processing of crude rubber for civilian purposes was frozen. Four days after that, rubber prices were fixed. And the day after Christmas the first step toward synthetic production was taken with the setting up of a rubber substitutes advisory committee. Early in 1942, tire rationing orders were issued.

During the next few months the Allied rubber position grew progressively worse, and it was felt by the Department of Munitions and Supply that the regulation of rubber in Canada was important enough to justify an individual control. Accordingly, on Nov. 2, 1942, the jurisdiction over rubber was removed from the Supplies Control, and a Rubber Control was established.

The rubber processors have been under very tight control, and the rubber they have used, whether for war or for civilian manufacture, has had to be processed according to mandatory specifications. No rubber has been released, even for war purposes, except by permit.

The measures of control over scrap and reclaim have closely paralleled those over crude rubber. On Mar. 23, 1942, the use of reclaim was limited to much the same essential articles as those for which natural rubber could be used, but in many articles its use was made mandatory, and in other articles the manufacturers were compelled to use a specified proportion of reclaim. When synthetic rubber became available, the restrictions on scrap and reclaim were gradually relaxed.

*Chemicals.*—During the early months of the War, the problem of supplying chemicals for the war program rested on the shoulders of the Chemicals and Explosives Production Branch of the Department of Munitions and Supply. But early in 1941 it became apparent that shortages of chemicals both for war and civilian purposes made necessary a closer regulation of supplies. In July, 1941, a Chemicals Controller, Department of Munitions and Supply, was appointed.

Since its inception, the Control has broadened in scope until it now takes in more than 300 items ranging from quinine, dealt with in ounces, to soda ash and sulphuric acid, dealt with in hundreds of thousands of tons. Much of the allocation and other control work has been accomplished without issuing formal orders.

*Motor Vehicles.*—In peace-time the automobile industry was one of the five largest Canadian industrial enterprises. To divert the facilities of the industry from civilian to war needs and to arrange for the maintenance of essential passenger cars and trucks, a Motor Vehicle Controller was appointed in the Department of Munitions and Supply on Feb. 13, 1941.

Early in 1942, the production of passenger automobiles was stopped. To take care of the needs of physicians, nurses, firefighting and police departments, and others in essential classifications, 4,500 new cars were set aside for a Government "bank". Cars from this reserve pool are released only for essential purposes on a permit from the Motor Vehicle Control. To the end of 1943, about 800 cars were released from the "bank". By January, 1942, demands from the Armed Forces had increased to a point where drastic curtailment of civilian truck production became necessary. A ban on the making of trucks and buses, except by permit, went into effect on Mar. 14, 1942. However, the expansion of business activities and increased transportation resulting from the war program made it necessary to meet the needs of essential commercial firms for transportation equipment. Trucks and equipment were diverted from non-essential to essential work, and restrictions were imposed on trucking and delivery services. This diversion met most of the needs during 1942, but it was obvious that a broader program would have to be developed.

A study was made of the specifications of vehicles being produced for military equipment, and models were selected of such basic design that they would meet civilian requirements. Manufacturers were then permitted to divert from military schedules certain models which were to be stripped of all military equipment and produced as commercial units. Prospective purchasers had to prove their essentiality to the Motor Vehicle Control before a truck could be released.

**Controls Exercised by the Wartime Prices and Trade Board.\***—An outline of the principles and procedure in Board controls is given in the Prices Chapter at pp. 776-783. Some details of control over a few types of manufactured goods coming under the jurisdiction of the Board are given in the following paragraphs:—

*Agricultural Implements.*—During 1942 the production and importation of agricultural implements were made subject to increasingly restrictive quotas for various types and kinds, but because of the critical need for new implements and parts to meet the large food production goals, quotas were gradually raised in 1943. Provisions were made for conservation of materials and for planning of production in accordance with the relative urgency of need for different implements. Rationing of farm implements was adopted Oct. 6, 1942.

Production plans for 1943 as revised in January, 1943, called for the manufacture of farm machinery at 35 p.c. of 1940 levels, and of repair parts at 165 p.c. In July, 1943, quotas for the 1943-44 production season for farm machinery and equipment were set about 130 p.c. higher than previously (77 p.c. of the average of the 1940-41 output). Large increases were permitted in certain lines such as

\* Prepared in the Economics Branch, Research Division of the Wartime Prices and Trade Board.

milking machines and haying equipment. Since production has also been restricted in the United States (the source of various raw materials, component parts, etc.), it was necessary to co-ordinate the regulations of the two countries.

*Household Appliances.*—Beginning in October, 1941, the Controller of Supplies in the Department of Munitions and Supply imposed production quotas on the manufacture of radios, metal-clad refrigerators, vacuum cleaners, washing machines, all domestic stoves and heaters and electric irons. Quotas were later replaced by prohibition of manufacture except under permit. The production of sewing machines for civilian purposes was prohibited on June 1, 1942.

It became clear late in 1943 (by which time these appliances had been transferred to the jurisdiction of the Wartime Prices and Trade Board) that civilian supplies of electric washing machines and electric irons had fallen to an uncomfortably low level. Estimates of civilian requirements for these items were prepared by the Wartime Prices and Trade Board and submitted to the Wartime Industries Control Board where decisions were made as to what materials, labour and plant facilities could be spared.

*Other Metal Products.*—Similar restrictions were extended to all other civilian-type metal products. Production of electrical equipment using copper and brass was curtailed and sales of residential lighting fixtures to consumers placed under permit. Use of scarce metals in heating and plumbing equipment was restricted, often by simplification measures. Beginning early in 1942 sales and deliveries of office machinery were placed under permit and the use of metal prohibited in making filing cabinets and other equipment. The use of metal in household furniture, springs and mattresses was drastically cut. Metal containers have wherever possible been replaced by glass and fibre, and tin has been economized by using a lighter coating of tinfoil and substituting lacquered blackplate. Late in 1943 and early in 1944, it became possible to relax and revise a number of these restrictions on the end use of metals, although in many cases the metals remained scarce and subject to careful allocation by Wartime Industries Control Board.

*Wood and Paper Products.*—Shortages of lumber have been evident since 1941, reflecting labour scarcity and high military and export requirements, but there was little scope for conservation in its civilian use because wood was being substituted for even scarcer metals in many important uses. By the end of 1943 it became advisable to permit return to metal in a few cases.

Restrictions on the manufacture of paper and fibre products were introduced early in 1943 and had the general objective of reducing the variety of products and eliminating non-essential types, thus securing longer production runs and saving labour. Quota rationing was introduced for newspapers and periodicals in January, 1943, and extended in July to other similar publications. In the summer of 1943 the paper supply position became critical and in November the use of commercial printed matter was made subject to permit and other conservation measures were adopted. During the latter part of the year National Selective Service took action to obtain additional labour to maintain the supply of pulpwood.

*Oils and Fats.*—War-time needs and the loss of certain important foreign sources of supply have necessitated special efforts to increase domestic production of linseed oil, to develop substitutes for certain Chinese and East Indian oils and to restrict consumption of the remaining reserves of scarce oils.

*Textiles and Clothing.*—During the War, Canadian textile consumption has increased by about 50 p.c., largely due to military requirements, with a considerable increase in industrial and other civilian uses. Procurement of fibres, yarns and fabrics from abroad has to a large extent involved negotiations between Canadian and foreign government agencies (see p. 444).

In July, 1943, Canadian requirements of British cotton fabrics, which had totalled five to ten million pounds annually, were transferred to the United States, involving much work in arranging new sources of supply. Cotton-woven fabric exports from the United States have, since Jan. 1, 1944, become subject to more formal control, which has the advantage of assuring Canada of her requirements from that country.

Internally the manufacture of textiles and clothing has come under the Wartime Prices and Trade Board which has organized, in some detail, the production of yarns and fabrics. For instance, the licensing plan of the Wool Administration now covers the construction, price and quantity of each fabric to be made in every Canadian woollen mill.

In the secondary textile field the Board has, where necessary, issued production directives to garment manufacturers requiring them to concentrate on production of essential garments, and has assisted manufacturers in obtaining materials and labour. Garment simplification and restrictions on style changes have saved material and eliminated slack periods in manufacture. Labour shortages in the entire textile field have been a difficult problem and have received considerable attention from National Selective Service.

### The Manufacture of Principal Munitions of War\*

It is not possible to publish at this time complete information regarding Canadian munitions production during the years 1942 and 1943. However, sufficient information can be provided to show, at least in general terms, the magnitude of Canada's contribution to the arming of the United Nations. At a later date more detailed data may be given; for the present a brief outline of the manufacture of the principal munitions of war will indicate the success with which Canada's pre-war industry has been converted and developed to outfit Canada and her Allies.

The Department of Munitions and Supply is the procurement agency for the Armed Services of Canada and her Allies. The total dollar value of contracts awarded by the Department of Munitions and Supply and its predecessors, the Defence Purchasing Commission and the War Supplies Board, to the end of 1943 totalled approximately \$9,450,000,000. The estimated total value of war production, including the value of deliveries on orders placed abroad, war construction and capital assistance, in the fiscal year 1942-43 was \$2,900,000,000, and for the

\* Prepared by H. Carl Goldenberg, M.A., B.C.L., Director-General, Economics and Statistics Branch, Department of Munitions and Supply.

fiscal year 1943-44 the estimate is \$3,435,000,000. At the end of 1943 there were more than 1,000,000 people engaged in direct and indirect war employment, and of these about 800,000 were engaged in manufacturing war equipment.

War production proper, excluding construction, showed an increase of more than 150 p.c. in 1942 over 1941 and an increase of about 35 p.c. in 1943 over 1942. During 1942 and 1943 certain war production targets were reached. This involved considerable program revision—reduction of some items and expansion of others. For the most part, the Canadian manufacturing capacity was sufficiently flexible to meet the constant need for such program revision.

**Aircraft.**—At the outbreak of war in 1939 the Canadian aircraft industry employed about 1,000 persons. Including the overhaul plants, the primary contractors and the sub-contractors, there were 122,000 persons employed in aircraft manufacture at the end of 1943, of whom 39,000 were women. The following statement shows the number and the weight, excluding engines, of aircraft produced in Canada each year since the beginning of the War.

Year	Production of Aircraft	
	No.	Weight lb.
1940.....	846	1,628,118
1941.....	1,697	6,358,442
1942.....	3,811	17,578,309
1943.....	4,133	20,088,864

Since the beginning of the War, Canada has produced some 20 different types of aircraft. During 1942 and 1943 the emphasis of production was shifted from trainer to service types; this shift tended to reduce output in terms of numbers, inasmuch as one service type may involve fifty times the man-hours required for production of a primary trainer.

At the end of 1943 Canada was producing 8 types of aircraft—3 trainers, 1 former service craft converted to use as a military transport, and 4 service types. The trainers included the Cornell (a primary trainer), the Harvard (a secondary trainer), and the Anson (a twin-engined trainer). The Norseman was used earlier as a service craft and was shifted for use as a military transport. Production of service aircraft at the end of 1943 was confined to 4 world-famous types—the Lancaster, the Mosquito, the PBV Catalina and the Curtis dive-bomber. Production of each of these types called for all the skill and ingenuity of the Canadian aircraft industry. Elaborate tooling was required and personnel had to be absorbed and trained concurrent with production.

One of the main objectives of the Canadian aircraft production program from its inception was the provision of all the trainer aircraft needed for the British Commonwealth Air Training Plan. This objective was attained. Production of trainer craft has been geared closely to the needs of the Air Training Plan and as these needs declined trainer production was curtailed.

**Military Vehicles.**—Production of armoured fighting vehicles in 1942 amounted to 12,500 units and increased to 15,500 in 1943. Production of mechanical transport vehicles was 192,000 units in 1942 and dropped to 175,000 in 1943 but the 1943 production consisted of heavier and more costly types. In addition to production of complete units, the automotive industry and component manufacturers produced an average of \$7,500,000 of spare parts in each month of 1943 and the spare parts production will increase because of the importance of there being adequate supplies of parts available for the maintenance of vehicles in the field.

During 1943 production of armoured cars and reconnaissance cars was discontinued and the production of scout cars was discontinued temporarily pending design changes. In 1943 all orders for tanks were completed and the capacity was shifted to the production of self-propelled gun-mounts, tank turrets and railway equipment. At the end of 1943, self-propelled gun-mounts, which operate on a tank chassis, were being produced at a rate of 150 per month, and locomotives for shipment overseas at a rate of 24 per month. The universal carrier has continued in production at a rate of 900 per month; more than 23,000 have been delivered.

**Communications and Signals.**—The value of Canadian production of this equipment in 1940 was \$1,000,000, in 1942 production was \$60,000,000 and in 1943 \$136,000,000. At the end of 1943 the radio and communications industry was operating at a level approximately 18 times greater than in 1939. This program included approximately 4,500 different items in production by some 50 prime contractors and several hundred sub-contractors.

A major factor in the production of communications equipment has been Research Enterprises Limited, a Crown company, which in 1943 produced communications equipment in the amount of \$60,000,000. In addition, Research Enterprises Limited produced, in 1943, optical equipment and instruments to the value of \$10,000,000; total 1943 production of instruments was \$44,000,000.

**Guns and Small Arms.**—Production of gun barrels, carriages and mountings, considered as separate units, totalled 45,000 in 1943, as compared with 31,000 in 1942. Output of machine guns, rifles and other small arms jumped from 325,000 in 1942 to 580,000 in 1943.

Inasmuch as current and prospective needs of the Armed Services for certain types of guns had been supplied, production of Army guns was cut back during the latter part of 1943 and where possible the capacity thus released was converted to other uses or was maintained in working condition for stand-by purposes.

During 1943 production of 4 types of small arms was discontinued, the Boys anti-tank rifle, 2 types of machine guns and the 3-inch mortar. Offsetting these curtailments was new production of the 9 m.m. pistol, the 20 m.m. universal mounting, and the Polsten 20 m.m. automatic gun, a most modern and effective weapon. A new version of the Bren gun also was brought into production.

Small Arms Limited, a Crown company, produced rifles in 1943 at a rate of 35,000 per month and this plant reached a peak production of 8,500 Sten guns per month in 1943.

**Ammunition.**—In 1942 there were produced 28,000,000 rounds of gun ammunition and in 1943 30,000,000 rounds. Production of small-arms ammunition increased from 1,200,000,000 rounds in 1942 to 1,500,000,000 rounds in 1943. At the end of 1943 there were 130 plants engaged in manufacturing gun ammunition and components for a program involving the production of 154 varieties of shell or other ammunition components. Production of small-arms ammunition included more than 30 different types ranging in calibre from .22 inch to 1 inch, the major part of the production taking place in two Government arsenals.

**Chemicals and Explosives.**—Total net production of chemicals and explosives was 860,000,000 lb. in 1942 and 1,000,000,000 lb. in 1943 when peak production was reached. Rifle cordite production was discontinued at two plants late in 1943 and TNT production and other explosives production at Nobel, Ont., were also discontinued because of reduced requirements.

Canadian science has contributed notably to the development of chemicals and explosives. Canadian chemists discovered the most effective method of manufacturing RDX, the new super explosive. They have devised improved and important changes in the manufacture of TNT and developed a process for large-scale manufacture of fuse powders.

**Shipbuilding.**—During 1942 Canadian shipyards produced 81 cargo vessels, or 838,000 deadweight tons, and during 1943 the yards produced 137 cargo vessels, or 1,478,000 deadweight tons. In 1942, 117 naval vessels were produced and in 1943, 100 naval vessels; the naval vessel program in 1943 called for more difficult and more costly types.

To Dec. 31, 1943, Canadian yards delivered 332 escort and patrol vessels, including 26 frigates, 104 single-screw corvettes, 91 steel minesweepers, 34 wooden minesweepers, and 77 Fairmile patrol-boats. In addition to these deliveries, 68 vessels of these types had been launched and were being fitted out at the end of 1943. The naval vessel program also included delivery of 3 types of landing craft in the amount of 623 units to Dec. 31, 1943, as well as deliveries of tugs and auxiliary tankers. In the field of small craft, 3,500 were delivered to the end of 1943.

During 1943 the largest naval vessel ever built in Canada was launched—a Tribal Class destroyer. Three more destroyers were either approaching the launching stage or were planned as of Dec. 31, 1943.

Late in 1943 requirements for certain types of escort vessels were reduced. Plans were made to transfer some of the capacity thus released to production of a new type of landing vessel. At the end of 1943 there were 10 shipyards and 3 outfitting-yards engaged on the naval program and 5 small yards building other steel vessels such as tugs, lighters and auxiliary tankers, while 62 smaller yards were engaged on the small-boat program.

At the end of the year there were 7 shipyards engaged on the production of 10,000-ton cargo vessels and 3 smaller yards on production of 4,700-ton cargo ships. The types of 10,000-ton ships built in Canada include the coal-burning North Sands type for which the original design came from England, the oil-burning Victory type, and the Canadian type, which can burn either coal or oil, and the Victory tanker which is a converted Victory freighter. The 4,700-ton ships are all of the William Gray class.

In addition to production of new ships, Canadian facilities for ship repairs have increased tremendously. From January, 1940, to December, 1943, there were repaired in Canada 25,000 vessels, naval and merchant, and of these 5,000 were drydocked for major overhaul or examination.

**Housing.**—Early in the War it became apparent that emergency housing was necessary in areas where there was a heavy congestion of new war industry or where new munitions plants were established in locations somewhat remote from centres of population. This war emergency housing program was placed under a Crown company, Wartime Housing Limited. Under the program the company constructed, to the end of 1943, 17,700 houses, 13 hostels, 69 staff houses, 15 bunk houses, 19 dining halls, 30 schools and 22 community buildings.

**Miscellaneous Equipment.**—Total purchases by the Department of Munitions and Supply of personal equipment and service stores such as food, fuel, medical supplies, hardware, etc., amounted to \$2,988,000,000 to the end of 1943. In the case of medical supplies, facilities were established in Canada in 1943 for the production of penicillin.

## PART I.—GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

### Section 1.—Growth of Manufacturing in Canada

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

#### 1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1942

NOTE.—Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products <sup>1</sup>	Gross Value of Products

<sup>1</sup> In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.

<sup>2</sup> Not reported. <sup>3</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

### Special Factors in the Production and Consumption of Manufactured Products

**Summary Statistics of Manufactures.**—The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 5,850,076 in 1941, an increase of about 250 p.c. in 24 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 7.29 in 1941. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 and 1941. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

**Consumption of Manufactured Products.**—One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1941 was \$5,901,116,718, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. Since the commencement of the War, however, it has been necessary to export more and more of such goods to the United Kingdom, and while this has been done mainly by increasing production, Government control of consumption at home is growing stronger as the War advances. In the case of manufactured vegetable products, the figures for 1942 show large excesses of exports over imports for such products as cereal foods (including flour), canned vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted and control of consumption will become more rigid.

On balance, Canada has, in the past, imported large quantities of iron and steel, textiles and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war have brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future as these industries are adjusted for peace-time needs.

Averages, per wage-earner..... <sup>h.p.</sup>	3.06	3.97	6.67	10.82	8.65	9.46	7.29	3

<sup>1</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

<sup>2</sup> Net values of products, see footnote 1, Table 1.

<sup>3</sup> Not available at time of going to press.

<sup>1</sup> Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended March 31 of the following years, while for 1939 and 1940 they are for the calendar year. Net imports are total imports less foreign products re-exported.

## Section 2.—Value and Volume of Manufactured Products

**Value of Manufactured Products.**—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, 84.6 in 1937, 75.4 in 1939 and 90.0 p.c. in 1941. Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 88.8 in 1941.

**Volume of Manufacturing Production.**—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported, and covers 71.1 p.c. of the total value of the production in 1926. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products were changed in 1931 and then again in 1936. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the present war was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production increased by 46.7 p.c. since 1939 and by 53.7 p.c. since 1929. The iron and its products group, with an increase of 113.1 p.c., reported the greatest expansion in output. This was followed by chemicals and allied products with an increase of 101.7 p.c., non-ferrous metals products 48.9 p.c., miscellaneous industries 42.2 p.c., non-metallic mineral products 41.6 p.c., textiles and textile products 36.4 p.c., animal products 28.9 p.c., vegetable products 25.9 p.c., and wood and paper products 25.8 p.c.

#### 6.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, Significant Years, 1923-41

(1935-39=100)

Classification and Group	1923	1929	1933	1937	1939	1940	1941

## Section 3.—Production by Industrial Groups and Individual Industries

### Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

**Recent Changes in Manufacturing Production.**—Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the present war upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than the number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are a number of reasons why the variation in the number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1941 increased by 46.1 p.c. as compared with an increase of 46.7 p.c. in the physical volume of production. Salaries and wages paid were 71.4 p.c. higher and the gross value of production 74.9 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1941 this figure jumped to 292.

**8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-41**

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

Industrial Group	1933 Compared with 1929			1939 Compared with 1929			1941 Compared with 1939		
	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts

**Detailed Statistics by Groups and Individual Industries.**—Table 9 presents for the year 1941, detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

The incidence of the War resulted in a re-arrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumers' market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to war-time production, the changes did not affect the value of their output and consequently their importance

as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 1,947 in 1941; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

### Subsection 2.—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the industrial equipment group and the increase in producers materials during the period. Another significant change is the decline in the food group. Whereas in 1922 food products comprised the leading group, in 1941 the production of producers materials took the lead by a wide margin. It should also be noted, however, that the cost of materials in this group is particularly high.

Past editions of the Year Book have presented at this place historical data showing manufacturing industries classified according to purpose (see p. 374 to p. 376 of the 1942 Year Book). In order to conserve space, this analysis has been reduced this year to data for the latest two years available, viz., 1940 and 1941.

### 10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, 1940-41, and in Detail for 1941.

NOTE.—Data for significant years 1922-39 are given at pp. 374 to 376 of the 1942 Year Book.

**Subsection 3.—Manufactures Classified by Origin of the Materials**

Historical statistics of manufactures classified on an 'origin' basis have been given in this subsection in earlier Year Books. This classification is interesting for comparisons with the external trade classifications according to origin. In order to conserve space, figures for earlier years are not repeated but the data for significant years from 1924-39 are given at pp. 377-378 of the 1942 Year Book.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

### 11.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Material Used, by Main Groups, 1940 and 1941

Year and Origin	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Gross Value of Products

#### Subsection 4.—Leading Manufacturing Industries

The rank of the ten leading industries in 1941 compared with previous significant years is as follows:—

THE TEN LEADING INDUSTRIES COMPARED AS TO RANK, SIGNIFICANT YEARS, 1922-41

Industry	Rank in—							
	1941	1940	1939	1937	1933	1929	1926	1922
Non-ferrous metal smelting and refining.....	1	1	1	1	2	9	9	—
Pulp and paper.....	2	2	2	2	1	1	1	2
Slaughtering and meat packing.....	3	3	3	3	3	2	3	3
Automobiles.....	4	4	5	4	11	4	5	6
Butter and cheese.....	5	5	4	6	5	6	6	5
Electrical apparatus and supplies.....	6	7	9	8	16	8	13	17
Primary iron and steel.....	7	10	11	12	31	16	25	20
Sawmills.....	8	6	8	7	14	5	4	4
Petroleum products.....	9	9	6	9	6	10	11	9
Flour and feed mills.....	10	8	7	5	4	3	2	1

A feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base-metal resources of the country, is now among the leading manufactures, along with the industries based upon forest, agricultural and live-stock resources. Under the impetus of war production, industries engaged in producing the equipment needed by the Armed Forces, such as electrical apparatus, automobiles, sawmills, and primary iron and steel, have advanced to higher positions.

**12.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1941**

	Industry	Estab- lish- ments No.	Capital \$	Em- ployees No.	Salaries and Wages \$	Cost of Materials \$	Value of Products

Percentages of leading industries to all industries.....	68.4	77.0	76.6	78.5	80.4	76.9	78.8
Primary textiles.....	581	290,736,917	83,973	93,854,374	217,500,205	185,794,412	411,553,879

<sup>1</sup> On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks first in number of employees and salaries and wages paid and second in gross value of production.

## Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

### Subsection 1.—Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1941 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$4,906,000,000 as compared with \$2,334,000,000 in 1917, an increase of 110 p.c. while wholesale prices have declined about 21 p.c. in the same period.

### 14.—Percentage Distribution of Capital Employed in the Manufacturing Industries, by Provinces and Industrial Groups, Significant Years, 1917-41

**Subsection 2.—Employment in Manufactures**

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 371 for the index of volume), tentative conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes of the efficiency of production are, of course,

affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930. Table 16 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed.

**16.—Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-41.**

(1935-39=100)

NOTE.—Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

**Monthly Record of Employment in Manufactures.**—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in September, 1941, when 861,774 wage-earners were employed, an increase of 53 p.c. over the same month in 1939.

**Hours Worked by Wage-Earners.**—From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1941, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week was broken down by sex, and a change was also made in the subdivision of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 18 to 21 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, then rose sharply to 50.5 in 1941, some of this increase no doubt being due to the inclusion of overtime. Female wage-earners in 1941 worked an average 4.4 hours per week less than their male co-workers.

18.—Wage-Earners in Manufacturing, Working Specified Numbers of Hours<sup>1</sup> per Week in the Month of Highest Employment, 1938-41

NOTE.—For hours worked per week in 1932-37, see Canada Year Book, 1942, p. 386.

## Subsection 3.—Salaries and Wages in Manufacturing Industries

In 1941 the 26,293 establishments covered employed 158,944 salaried employees and 802,234 wage-earners, a total of 961,178 persons. Out of every 1,000 persons employed in manufacturing, 163 were classed as salary earners and 837 as wage-earners; the former earned 22.6 p.c. and the latter 77.4 p.c. of the total amount paid out as remuneration for services.

The percentages of salaries are usually relatively high in both Ontario and Quebec as compared with the other provinces. Ontario had a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada, 44.9 p.c. were found in the textile group.

The average salary in 1941 amounted to \$1,801 which was \$55 or 3.2 p.c. higher than in 1939. Salaried employees in Ontario with \$1,898 received the highest salary. British Columbia came second with \$1,854 and Quebec third with \$1,736. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tend to raise the average salaries in the provinces in which these cities are located.

The average wage in 1941 amounted to \$245 or 25.1 p.c. higher than in 1939. Manufacturing industries in British Columbia paid the highest average wages of \$1,359, followed by Ontario with \$1,309, Manitoba \$1,181, Alberta \$1,118, Quebec \$1,103, etc. The high figures shown for Yukon and the Northwest

## 22.—Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1941, with Totals for Significant Years, 1917-40

Year	Salaries				Wages			
	Salaried Employees		Total Salaries	Average Salaries	Wage-Earners		Total Wages	Average Wages

<sup>1</sup> The averages of wage-earners and earnings for the years 1931 to 1941 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

<sup>2</sup> The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

<sup>1</sup> For a subdivision of annual earnings of wage-earners, by sex, see Table 25.

Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics on the distribution of employees by provinces and groups as well as average annual earnings are given in Table 22, and for a subdivision of annual earnings of wage-earners, by sex, see Table 25.

**Average Annual Earnings in the Forty Leading Industries.**—In only three industries did the average salaries exceed \$2,500 in 1941 petroleum products, breweries and pulp and paper. In eleven they ranged between \$2,000 and \$2,500, in twenty they averaged \$1,500 to \$2,000, and in the remaining six they were below \$1,500. The lowest salaries were reported by the sawmilling and butter and cheese industries each of which includes a large proportion of small establishments.

The highest wages, those above \$1,600, were paid in seven industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with \$1,963 was the highest in this group, and railway rolling-stock, with \$1,615, the lowest. In nine other industries average wages ranged between \$1,400 to \$1,600 in all of which the proportion of female workers is low. In twelve other industries average wages ranged between \$1,000 and \$1,400, while in the remaining twelve they were below \$1,000. This last group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Employment by sex and average annual earnings in the forty leading industries is given in Table 23, and annual earnings by sex in Tables 26 and 27.

### 23.—Salaries and Wages Paid in the Forty Leading Industries, 1941, with Comparative Figures of Average Salaries and Wages Paid in 1940

NOTE.—Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 26 and 27.

**Average Annual, Weekly and Hourly Earnings.**—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed, in others the ability to exercise muscular strength is necessary; in others again the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 22 and 23 will be of value to the student.

Comparing 1941 with 1939, average annual earnings of male wage-earners increased by 26 p.c., weekly earnings 25 p.c., and hourly earnings 16 p.c. For female wage-earners the increases were 19, 18 and 13 p.c., respectively.

**Real Earnings of Employees in Recent Years.**—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of “real” wages is obtained. Index numbers for 1931 to 1941 are given in Table 28. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at 117.2 in 1941, an increase of about 33 p.c.

**28.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners in Manufacturing Industries, 1931-41**

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Year	Wages Paid	Average Wage-Earners	Average Yearly Earnings	Index Numbers (1935-39=100)		
				Average Yearly Earnings	Cost of Living	Real Value of Average Yearly Earnings
	\$	No.	\$

**Percentages of Salaries and Wages to Net Value of Products.**—Table 29 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was abnormally high. It should be borne in mind, however, that salaried employees increased 127.0 p.c. during the period 1924-41 while wage-earners increased but 92.1 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products.

29.—Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-41

Year	Value Added by Processes of Manufacture <sup>1</sup>	Salaries Paid	Wages Paid	Percentage—

<sup>1</sup> Equivalent to "net value of products"; see footnote 1, Table 1, p. 363.

Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

**Size as Measured by Gross Value of Products.**—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,052 in 1941 and their output was about 70 p.c. of the total value of manufactures.

**Size of Establishments as Measured by Number of Employees.**—In 1923, establishments employing 501 hands or over accounted for 21·4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27·3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20·5 p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again and in 1941 stood at 38·3 p.c. The same also holds true for all establishments employing 101 hands or over. In 1923 they employed 58·6 p.c. of the total, in 1929, 61·9 p.c., in 1933, 55·7 p.c., and in 1941, 70·0 p.c.

**Size of Establishment in Leading Industries.**—Table 32 summarizes the degree of concentration in some of the leading industries of Canada. This concentration is analysed in detail for each of these twenty-five industries at pp. 61 to 64 of the Summary Report of the Manufacturing Industries of Canada, 1941, obtainable from the Dominion Statistician, price 50 cents. Concentration is extremely marked as regards automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low.

## PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This Part of the chapter is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1941 amounted to \$4,963,000,000 or over 81 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16·8 p.c. of the gross production compared with 37·4 p.c. for Ontario and 33·3 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. Previous to 1941, Table 1 showed the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not now possible to publish this detail, and the provincial distribution by groups instead of by industries is now given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

<sup>1</sup> Less than three establishments.<sup>2</sup> Includes non-ferrous metal products.

The degree of concentration of manufacturing production in large units is illustrated in the statement below. As will be seen in the right-hand column, Quebec Province shows the greatest degree of concentration with 43.5 p.c. of all persons engaged in manufacturing employed in establishments having 300 or more persons.

## CONCENTRATION OF MANUFACTURING PRODUCTION IN EACH PROVINCE, 1941

## Section 1.—The Manufactures of the Maritime Provinces, 1941

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish-curing and packing, and slaughtering and meat packing the leading manufactures of the Province. Printing and publishing is also an important industry in this Province. Nova Scotia is renowned for its coal mines and its fisheries, but it has also extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish-curing and packing, shipbuilding and repairs, sawmills, pulp and paper, and butter and cheese. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although manufactures of fish and agricultural products add to the varied output of the Province.

<sup>1</sup> Net value is derived from gross value by deducting cost of materials, fuel, and electricity.

<sup>2</sup> Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island, cotton and jute bags, slaughtering and meat packing, fertilizers, and sheet metal products; in Nova Scotia, sugar refineries, cotton yarn and cloth, wire and wire goods, coke and gas, and petroleum products; in New Brunswick, sugar refineries, railway rolling-stock, and shipbuilding.

## Section 2.—The Manufactures of Quebec, 1941

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927; it has been in second place since 1935. The petroleum-refining industry has also expanded and risen in importance during the same period; it was in twenty-sixth place in 1927 and eleventh in 1941.

Quebec with about 30 p.c. of the Dominion output is the second largest manufacturing province. The production of pulp and paper is the dominant industry. In addition to supplying about 9 p.c. of the gross value of Quebec manufactures, it furnishes about 50 p.c. of the Dominion total for this industry. The value of tobacco products forms approximately 87 p.c., cotton yarn and cloth 72 p.c., women's factory clothing 68 p.c., leather boots and shoes 61 p.c., men's factory clothing 58 p.c., and railway rolling-stock 47 p.c. of the Dominion totals for these products. The Province of Quebec is thus an outstanding manufacturing province rather on account of its large individual industries than because of the diversification of its industrial activities.

### 3.—Statistics of the Leading Industries of the Province of Quebec, 1941

<sup>1</sup> See footnote 1, Table 2, p. 412.

<sup>2</sup> Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are less than three establishments reporting.

### Section 3.—The Manufactures of Ontario, 1941

The gross value of the manufactured products of Ontario in 1941 represented about 51 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 30 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the present war. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the present war these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1941 increased the relative value to 51.4 p.c.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among industries in which this Province is pre-eminent are those of the manufacture of automobiles, agricultural implements and starch which are carried on practically in this Province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total in 1941, are as follows: leather tanneries 87.9, rubber goods 81.8, electrical apparatus and supplies 76.1, primary iron and steel 68.7, iron castings 68.0, fruit and vegetable preparations 66.0, flour and feed mills 60.7, hosiery and knitted goods 57.8, and furniture 56.5.

#### 4.—Statistics of the Leading Industries of the Province of Ontario, 1941

## Section 4.—The Manufactures of the Prairie Provinces, 1941

The leading industries of these Provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as bread and baking, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three Provinces as an economic group, slaughtering and meat packing had the largest gross production in 1941, amounting to \$112,951,716, followed by butter and cheese with \$44,062,012, and flour and feed mills with \$38,575,041. These three industries for the processing of the agricultural products of the Provinces accounted for 43 p.c. of their total manufacturing production.

<sup>1</sup>See footnote 1, Table 2, p. 412.<sup>2</sup>Other leading industries, individual statistics of which cannot be given because there are fewer than three establishments in each industry, are: Manitoba, pulp and paper, non-ferrous metal smelting and refining, and coke and gas products; Saskatchewan, cotton and jute bags, automobiles, and non-ferrous metal smelting and refining; Alberta, malt mills, sugar refining, wood preservation, glass and cement products.

## Section 5.—The Manufactures of British Columbia, 1941

Except for the major industrial provinces of Ontario and Quebec, British Columbia leads in manufacturing production. The rich forests have given the wood industries a pre-eminence in the Province. Sawmilling, in 1941, accounted for 20 p.c. of the manufacturing production of the Province and for 50 p.c. of the total value of sawmill output in the Dominion. Further emphasizing the importance of the forests in the industrial life of the Province, the pulp and paper industry ranked fourth. Second in importance was shipbuilding and repairs with a value of production of \$32,421,032. This industry advanced from sixth place in 1940 when the output was valued at only \$9,943,941. Third in importance was fish-curing and packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 66 p.c. of the total production of this industry in Canada. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

Percentage of leading industries to total of all industries in the Province.....	56.4	77.2	73.7	75.9	82.1	80.7

<sup>1</sup> See footnote 1, Table 2, p. 412.

<sup>2</sup> Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: condensed milk, sugar refining, non-ferrous metal smelting and refining, and bridge and structural steel.

## Section 6.—Manufacturing Industries in Cities and Towns

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 7, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1941 accounted for 94.6 p.c. and 93.2 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions fell to 70.6 p.c. and 71.9 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

### 7.—Cities and Towns Each with a Gross Manufacturing Production of over \$1,000,000, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1941.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 9, since in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form in Table 9, without disclosing the operations of individual establishments.

Province	Cities and Towns with a Gross Production of over \$1,000,000 each	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each	Total Production in Cities and Towns Producing over \$1,000,000 each	Total Production in each Province	Production in Cities and Towns as a Percentage of Total Production in each Province

## CHAPTER XV.—CONSTRUCTION

### CONSPECTUS

	PAGE		PAGE
SECTION 1. THE GOVERNMENT AND THE CONSTRUCTION INDUSTRY.....	423	SECTION 2. CONTRACTS AWARDED AND BUILDING PERMITS ISSUED.....	427
Subsection 1. Government Aid to Civil Housing.....	423	SECTION 3. THE ANNUAL CENSUS OF CONSTRUCTION.....	431
Subsection 2. Construction for War Purposes.....	425		

Section 1 of this chapter deals with the effects of Dominion Government expenditures on civil construction under the Dominion Housing Act, 1935, and the Home Improvement Plan, 1936, together with controls made necessary by war-time conditions; and a summary of the expenditures in connection with the Armed Forces, and Government aid to construction required in connection with war industries. Section 2 shows the value of construction contemplated, as shown by contracts awarded and building permits issued, to the end of 1943, and is therefore in the nature of a forecast of work still to be undertaken. Section 3 combines statistics of the Annual Census of Construction in summary form; these statistics cover the bulk of building and construction work actually completed to the end of 1942 and are comprehensive inasmuch as they include all types of construction dealt with in Sections 1 and 2 that were actually completed by the end of the year stated; they are not, however, all-inclusive as is pointed out at pp. 431-432.

### Section 1.—The Government and the Construction Industry

#### Subsection 1.—Government Aid to Civil Housing

The construction industry, characteristically sensitive to general economic influences, suffered far more from the severe depression of 1929-33 than most sections of industry. To alleviate depressed conditions in such an important industry, and also in recognition of the widespread benefits that result directly and indirectly from construction activity, the Dominion Government did much after 1934 to stimulate building by encouraging private construction.

An outline of the provisions of the National Housing Act appears at pp. 368-370 of the 1941 Year Book, while additional details regarding Part II of the Act, designed to assist local housing authorities, are given at pp. 469-470 of the 1940 Year Book. The numbers of loans granted under the Government Home Improvement Plan, which was in existence from Nov. 1, 1936, to Oct. 31, 1940, are shown, by provinces and for each year, at pp. 370-371 of the 1941 Year Book.

Part I of the Dominion Housing Act is the only Part of the Act under which loaning operations are still being carried out. Under war-time restrictions, loans are granted for the construction of single-family dwellings only. Of the loans granted in 1943, less than one per cent were for amounts of \$2,500 or under, about 14 p.c. for \$3,000 or under and about 86 p.c. for \$3,500 or under; the maximum loan was \$4,000 and the average unit loan \$3,171. Altogether 476 localities have taken advantage of the Act. Loans made under the "Housing Acts" and the Home Improvement Plan between 1935 and the outbreak of war, aggregated about \$100,000,000 which, of course, represented only a part of the capital actually spent, since the borrowers contributed large amounts on their own account.

### 1.—Loans Approved under the Dominion Housing Act, 1935, and Part I of the National Housing Act, 1938, by Provinces, 1942 and 1943

NOTE.—Figures for 1935 and 1936 are given at p. 469 of the 1940 Year Book, and for 1937 and 1938 at p. 415 of the 1942 edition. In the figures as published in earlier editions withdrawals of loans approved have not been deducted, but in the figures given below such deductions have been made.

Province	Loans		Family Units Provided		Amounts

<b>Totals.....</b>	<b>1,007</b>	<b>1,720</b>	<b>999</b>	<b>1,720</b>	<b>3,028,896</b>	<b>5,451,133</b>

After the commencement of hostilities in September, 1939, there was little need for further support to private building enterprise, although the existing Government housing policy was continued. It soon became evident that the Government's contribution to construction for defence, together with the necessary financing to meet expansion in war industry, would quickly take up the slack that still remained. This has proved to be the case, while at the same time civilian construction has become subject to war-time restrictions and priority rulings, so that it has become of secondary importance.

**Government Control of Civil Construction Since the Outbreak of War.\***—In May, 1941, authority to control new construction, repairs to buildings, expansion of existing facilities or the installation of equipment was given to the Priorities officer, and exercised through a Construction Control Division set up in the Priorities Branch of the Department of Munitions and Supply. In August, 1941, a Controller of Construction was appointed by the Department of Munitions and Supply and the powers of the Priorities officer in this field were conferred upon him.

A policy of curtailment has been followed and a licensing system established. Applications for licences are scrutinized to ascertain whether projects are essential, or whether the type of construction could be modified to conserve scarce materials. The granting of a licence does not confer on the licensee any priority rights to the delivery of equipment, materials or supplies to complete a project.

By the end of 1941, acute shortages of metals and other critical materials were developing. In January, 1942, broadened powers gave the Controller of Construction jurisdiction over all construction, repair, remodelling and installation projects involving all types of housing, and all commercial, industrial and institutional buildings, excepting only those owned or financed by the Dominion Government. Included in these powers was control over the installation of machinery and equipment. In general, projects at a cost exceeding \$5,000 could not be started or continued without a licence from the Controller.

In the autumn of 1942 a further tightening of restrictions reduced the minimum cost of various types of projects that could be undertaken without a licence.

\* Prepared in the office of the Director of Publicity, Department of Munitions and Supply.

Thus, by the end of 1942 the Construction Control had virtually eliminated all non-essential building projects and had also restricted the use of building materials containing steel, copper, zinc, and rubber and other material in short supply.

During 1943 the already existing restrictions on the construction of dwellings were tightened, but continued construction of low-cost housing in crowded areas was permitted. At the turn of the year, 1943-44, it was announced that, to meet changing requirements, consideration would be given to applications for licences for slightly larger dwellings.

Early in 1944 the Construction Control licence limits were revised upwards as follows:—

Type of Construction	Limit \$
Installation of equipment in any plant.....	5,000
Construction, repairs, etc., to any plant.....	5,000
Construction, repairs, etc., and/or installation of equipment in any building other than a plant.....	1,500
Construction, repairs or alterations, or installation of equipment in commercial grain storage warehouses, longitude 90° to British Columbia boundary.....	500

### Subsection 2.—Construction for War Purposes\*

Construction related to Canada's war effort may be divided into the following groups:—

(1) Building of defence projects for Air: (a) Aerodromes and training schools under the British Commonwealth Air Training Plan; (b) Development of Canada's Home War Establishment for Air; (c) Royal Air Force schools in Canada.

(2) Building of Army defence projects.

(3) Construction of Naval projects, including harbour installations.

(4) Construction of new industrial plants and plant extensions involving Government capital assistance.

(5) Provision of necessary housing incidental to industrial expansion for war purposes.

Most contracts under groups (1) to (3), and some contracts under (4) are awarded by the Construction Branch of the Department of Munitions and Supply. Contracts under (5) are let by Wartime Housing Limited, a Government-owned company established for this purpose. Supervision of purely\* defence projects (1), (2) and (3) is under the Department of National Defence, although the Department of Transport awards contracts for and supervises the building of most of the paved runways for air fields.

\* Prepared in the office of the Director-General, Economics and Statistics Branch, Department of Munitions and Supply.

### 2.—Construction Contracts (Commitments) Awarded for War Purposes Through the Department of Munitions and Supply, 1940-43

NOTE.—In addition to the totals shown, orders have been placed by the Department of Transport for defence construction work on account of the U.S. Forces and other agencies. The Department of National Defence had incurred expenditures for war projects not included above, largely where Service labour has been used. In addition, substantial construction work has been undertaken by private companies, notably the Aluminum Company of Canada Ltd.

<sup>1</sup> Awarded by Wartime Housing Limited.  
ment of Transport.

<sup>2</sup> Awarded by the Civil Aviation Division, Department of Transport.

Construction relating to that portion of capital assistance extended to industry for the erection of chemical and explosives plants has been carried on under the supervision of Allied War Supplies Corporation, a Government-owned company set up for this purpose. This Corporation places contracts with such firms as Defence Industries Limited (a subsidiary of Canadian Industries Limited), Consolidated Mining and Smelting Company, Canadian Car and Foundry Company, and others for the production of chemicals, explosives and propellants. Supervision of these projects, of which there are now over 50, is carried out jointly by Allied War Supplies Corporation and the firm concerned. In addition, substantial capital assistance has been extended to firms engaged in aircraft production, shipbuilding and ship repair, and in the broad field of munitions production. In some instances the war projects are wholly owned and operated by the Government or Government-owned companies (e.g., Dominion Arsenals, National Railways Munitions Ltd., Toronto Shipbuilding Co., Victory Aircraft Ltd., and Research Enterprises Ltd.), while in others the projects are Government-owned and privately operated (e.g., Defence Industries Ltd., and Canada Strip Mill Ltd. In the majority of cases the projects are partially financed by the Government and operated by private industry.

Wartime Housing Limited, established under the Department of Munitions and Supply, provides the necessary housing for employees of war plants, many of which have been located in sparsely settled localities requiring new housing facilities. In other municipalities war expansion has intensified the need for additional living accommodation. Housing expenditures to Dec. 31, 1942, amounted to \$39,730,590 and unexpended commitments to \$29,332,016. It is estimated that Wartime Housing expenditures in 1943 will amount to approximately \$20,000,000.

Government expenditures on construction amounted to \$260,000,000 for the calendar year 1942, compared with \$189,000,000 for 1941, divided as follows: Armed Services, \$189,000,000; that part of capital assistance to private enterprise

earmarked for construction, \$42,000,000; and Wartime Housing Limited \$29,000,000. Commitments have been made for the continued expansion of war projects during 1943.

Regarding employment on defence projects, it was estimated that approximately 94,000 workers were employed in on-site construction work at Aug. 1, 1942, as compared with 80,000 in August, 1941. In addition, the number of persons engaged in the production of construction materials and in the manufacture of machinery and equipment for installation in new plants and plant extension exceeds the on-site employment. The off-site employment is estimated to be in the neighbourhood of 100,000 workers, exclusive of employment provided in the production of materials and machinery imported from the United States.

In August, 1943, the number of persons engaged in on-site construction work for war purposes is estimated to have been 90,000 persons.

## Section 2.—Contracts Awarded and Building Permits Issued

In this section barometric statistics are given of work actually in sight as contracts awarded and building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done. Obviously, these statistics and those of Section 3 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards big contracts or contracts undertaken late in any year, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 3 and are valuable as showing from year to year the work immediately contemplated during the period.

**Construction Contracts.**—The value of construction contracts awarded during 1943 showed a decrease of 26·8 p.c. from the 1942 total. By the end of 1941, Canada had passed the peak of her war-construction period and, while construction jobs have gone ahead since that time, the volume has continued to taper off.

Industrial construction for 1943 was considerably less than half the 1942 total and about one-quarter of the total for 1940, the peak year for this classification. This is explained by the fact that Canada has built about all the war factories she has the labour to staff or the raw materials to supply. Reflecting the same trend, government and business building was less than half the total volume of a year ago. The dollar volume of residential construction has been maintained better than any other classification throughout the war years. Only the 1941 volume exceeded the totals achieved in 1942 and 1943. This record is all the more noteworthy since the residential construction of the past two years does not include any large apartment buildings, especially of the luxury type, which contributed heavily to the volume in pre-war years.

Engineering construction in 1943 showed a slight increase over the 1942 total. Actually, these figures do not give a true picture of the extensive construction carried on by Canadian engineering companies during the past two years. Some of the largest war jobs are not included in the figures, such as large naval and airport projects in Newfoundland and Labrador and also the Alaska Highway and Canol oil projects in Yukon and the Northwest Territories, contracts for which were let by the United States Government.

In all, the construction industry has been busy considering the depletion in its labour forces and the serious shortages of materials.

## 3.—Values of Construction Contracts Awarded in Canada, 1911-43

**Building Permits.**—Statistics of building permits were first collected in 1910, when the series covered 35 cities; in 1920 it was extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of those working in cities were residing outside the municipal boundaries of the cities in which they earned their living. In 1940 the series was again extended to cover 204 municipalities.

Building permits issued in 1943 registered a decrease of 23.1 p.c. compared with 1942, while construction contracts awarded decreased by 26.8 p.c.

### 5.—Values of Building Permits Issued by 204 Municipalities in Canada, 1942 and 1943

NOTE.—Statistics for these series covering years previous to 1942 will be found in the corresponding table of earlier editions of the Year Book. For the 35 cities marked • the record goes back to 1910; the 23 places marked ○ were added in 1920.

The indexes given in Table 6 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and

the centres studied, and accurate and representative data are difficult to obtain. Experience, the result of a study made in fifteen cities, indicates that the average proportions in all types of construction were 63·6 p.c. for materials and 36·4 p.c. for labour. The reduction in the cost of building operations in the depression years was probably much more than is indicated by the declines in the indexes of wholesale prices and wages from the relatively high averages shown since the War of 1914-18.

#### 6.—Values of Building Permits Taken Out in 35 Cities and Index Numbers of the Building Construction Industries, 1926-43

NOTE.—These cities are the 35 referred to (•) in Table 5. Figures for the years 1910-25 will be found at p. 422 of the 1942 Year Book.

Year	Value of Building Permits	Average Index Numbers of—

<sup>1</sup> Compiled by the Department of Labour.

<sup>2</sup> As reported by employers.

<sup>3</sup> Not available.

**Employment in Building Construction, 1943.**—The Dominion Bureau of Statistics makes current surveys of the employment afforded by industrial establishments normally employing 15 persons or over. The index of employment in building construction, calculated (1926 average = 100) from data furnished by some 1,075 employers, averaged 160·2 in 1943; the slight increase over the 1942 index was largely due to continued activity in defence projects.

### Section 3.—The Annual Census of Construction

The annual Census of Construction undertaken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken by contractors, builders and public bodies (except the smaller municipalities) throughout Canada. It does not include maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities when such

work is done by the employees of these concerns in the ordinary way: nor can it include a substantial amount of construction in the aggregate done by farmers and other individuals who might be otherwise unemployed, performing work on their own structures. It is doubtful whether a great deal of the work of railways and utilities is construction in the sense understood in the census: for instance, the routine "maintenance of way" expenditures, so far as they relate to inspection work, are not construction although, so far as they concern rebuilding of line for roadbed or structures, they might be said to fall in that category.

The following statement shows the expenditures by steam and electric railways, telegraph and telephone systems. Most of this work is done by employees but, as a proportion is also done by contractors, some duplications would result if these totals were added to the value of general construction as shown in Tables 7 to 10.

EXPENDITURES BY STEAM AND ELECTRIC RAILWAYS, AND TELEGRAPH AND TELEPHONE SYSTEMS ON MAINTENANCE OF WAY AND STRUCTURES AND MAINTENANCE OF EQUIPMENT, 1939-42.

<sup>1</sup> Revised since the publication of the 1942 Year Book to exclude depreciation and non-cash items.

<sup>2</sup> Includes work done by contractors.

<sup>3</sup> Includes value of additions and extensions.

**Industrial Statistics of Construction.\***—A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935 so that, with the completion of the 1942 figures, comparable statistics are now available covering the years 1935-42. Summary statistics are given in Tables 7, 8 and 9.

No relationship exists between the total value of construction as shown in these tables, and the value of contracts awarded as indicated in Table 3 of Section 2, p. 428. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas the tables following cover construction work carried on and actually performed in the calendar year.

\* Revised in the Construction Statistics Branch, Dominion Bureau of Statistics.

## 7.—Principal Statistics of the Construction Industry in Canada, 1939-42

Table 10 classifies the various types of construction carried out in 1941 and 1942. The item "Trade Construction" covers such items as brick laying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information on the industry than it is possible to include in the limited space available here, will be found in the Bureau's reports on the construction industry for 1941 and 1942.

**10.—Description, Classification and Value of Construction in Canada, 1941 and 1942**

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

In Tables 11 and 12 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1942, was October with 178,399 wage-earners and the lowest was February with 110,249.

### 11.—Employment of Wage-Earners in the Construction Industry and Their Remuneration, by Months, 1941 and 1942

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

SECTION 2. GEOGRAPHICAL DISTRIBUTION OF CANADIAN TRADE.....	454	<b>Part III.—Summary of External Transactions.....</b>	<b>494</b>
Subsection 1. Canada's Place in the World Economy.....	454	SECTION 1. CANADIAN BALANCE OF INTERNATIONAL PAYMENTS.....	494
		SECTION 2. THE TOURIST TRADE OF CANADA.....	501

External trade in commodities is only a part, though a very important part, of the broader field made up of the international exchange of values comprising goods, services, securities, etc. This relationship is shown in its proper proportions in Part III of this chapter. However, since commodity exports and imports constitute the largest factor in Canada's international transactions, and the one in which the greatest majority of Canadians are most vitally interested, this chapter is devoted chiefly to the consideration of commodity trade.

## PART I.—THE GOVERNMENT AND EXTERNAL TRADE

### Section 1.—The Development of Tariffs

The development of tariffs as affecting Canada is here outlined under two divisions: first, a historical sketch showing phases in the growth of Canadian trade that have influenced tariff development; and secondly, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it is impossible to go into detail with such an intricate matter as tariffs. It has been necessary, therefore, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

#### Subsection 1.—Historical Sketch of External Trade and Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption of the present form of preferential tariff in 1904.

**Subsection 2.—Tariff Relationships with Other Countries\***

## BRITISH EMPIRE COUNTRIES

Trade agreements entered into by Canada with the United Kingdom, Eire, Australia, New Zealand, Union of South Africa, Southern Rhodesia and British West Indies, are summarized at pp. 383-386 of the 1941 Year Book. Under their original terms, the United Kingdom, Eire, Australian and South African Agreements have continued in force, subject to termination on six months' notice. It was arranged in 1939 that the Trade Agreement with the British West Indies would remain in operation, but could be terminated on six months' notice instead of the former twelve months. The one-year Trade Agreement of 1932 with New Zealand, kept in force by annual renewals, was extended on Sept. 30, 1941, with a six months' notice provision substituted for a fixed date of expiry. Although the Trade Agreement between Canada and Southern Rhodesia made in 1932 came to an end in 1938, each country, in its own legislation, still grants tariff preferences to the products of the other. Enemy occupation of the Channel Islands from July 1, 1940, Hong Kong from Dec. 24, 1941, British Malaya from Feb. 15, 1942, and British Borneo from Mar. 7, 1942, with consequent prohibition of Canadian trade with them, nullified for the time being the tariff preferences in these areas provided by the Canada-United Kingdom Trade Agreement.

## FOREIGN COUNTRIES

Reciprocal tariff arrangements of Canada with Argentina, Brazil, Chile and Ecuador are reviewed in the 1942 Year Book at pp. 429-431. Since that review, the Trade Agreement with Argentina was approved by the Argentine Senate on June 12, 1942. Pending exchange of ratifications it continues in force provisionally subject to termination on three months' notice. The Government of Brazil having, by a Decree-Law of Apr. 15, 1942, ratified that country's Agreement, ratifications were exchanged at Ottawa on Mar. 17, 1943, bringing the Agreement definitely into force 30 days later. It was promulgated in the Brazilian Official Gazette of May 13, 1943. Provisional operation of the Trade Agreement between Canada and Chile, first arranged for one year from Oct. 15, 1941, was continued for another year by notes exchanged on Oct. 9 and 12, 1942. A Canadian *Modus Vivendi* of Apr. 9, 1941, with Venezuela was extended by Exchange of Notes on Apr. 6, 1942, and again on Apr. 9, 1943, for one year on each occasion, subject to termination on three months' notice. Canada's trading position as affected by commercial agreements in respect of Bolivia, Colombia, Costa Rica, Dominican Republic, Guatemala, Haiti, Panama, Paraguay, Portugal, Salvador, Spain, Sweden, Switzerland, United States and Uruguay, continues as outlined in the 1941 Year Book at pp. 387-393. Canadian Trade Agreements and similar commercial treaty relationship, as defined in the 1941 Year Book, were terminated automatically with several countries by application of Enemy Trading Regulations. See p. 441.

The Canadian Trade Agreement with France was not suspended as regards other French Colonies. Reduced rates of the Canadian Tariff resulting from the Trade Agreements with France and Poland apply as formerly to goods from countries entitled to most-favoured-nation treatment in Canada, in addition to the benefits of the intermediate tariff and any lower duties of the Canada-United States Trade Agreement.

\* Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

## Section 2.—The Commercial Intelligence Service\*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is organized to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners who make periodical reports upon trade and financial conditions, variations in markets and the current demand or opportunities for Canadian products. They also secure and forward to the Department at Ottawa specific inquiries for Canadian goods and, in general, exert their best efforts for the development and expansion of overseas markets.

In order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and, while in this country, gives first-hand information to possible Canadian exporters and makes direct contacts with Canadian manufacturers regarding opportunities and conditions of trade in his territory.

**Organization at Ottawa.**—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Directories—where the Exporters Directory, listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up-to-date; Editorial—where the "Commercial Intelligence Journal" is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal and Fish Products; Vegetable Products; Metals and Chemical Products; Forest Products; and Manufactured Products. These last five divisions handle correspondence falling within their respective classifications.

**Organization Abroad.**—Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

### CANADIAN GOVERNMENT TRADE COMMISSIONERS

NOTE.—This list was revised as at July 1, 1943. Cable address of Trade Commissioners is "Canadian" unless otherwise stated. Bentley's second phrase code is used by Canadian Trade Commissioners.

*Argentine Republic*—(Territory includes Uruguay.)

J. A. Strong, Commercial Attaché, Bartolome Mitre 478, Buenos Aires (1).

*Australia*—

Sydney (territory includes Australian Capital Territory, New South Wales, Queensland, Northern Territory and Dependencies).  
Melbourne (territory includes States of Victoria, South Australia, Western Australia and Tasmania).

K. F. Noble, Acting Trade Commissioner. Address for letters—P.O. Box No. 3952V, Office—City Mutual Life Building, Hunter and Bligh Streets. Frederick Palmer, 44 Queen St., Melbourne, C.1.

*Brazil*.....

L. S. Glass, Commercial Attaché. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office—Ed. Metropole, 7th Floor, Av. Presidente Wilson 165.

*British India*—(Territory includes Burma and Ceylon.)

Paul Sykes. Address for letters—P.O. Box 886, Bombay. Office—Gresham Assurance House, Mint Road, Bombay.

\* Revised by C. M. Croft, Director, Commercial Intelligence Service, Department of Trade and Commerce.

## CANADIAN GOVERNMENT TRADE COMMISSIONERS—concluded

- British West Indies*—  
Trinidad (territory includes Barbados, Windward and Leeward Islands, British Guiana and Dutch Guiana).  
Jamaica (territory includes the Bahamas and British Honduras).
- Chile*—(Territory includes Bolivia.).....
- Colombia*—(Territory includes Venezuela, Republic of Panama, Canal Zone, Nicaragua, Costa Rica and the Netherlands West Indies.)
- Cuba*—(Territory includes Haiti, the Dominican Republic and Puerto Rico.)
- Egypt*—(Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Iran and Turkey.)
- Ireland*.....
- Mexico*—(Territory includes Guatemala, Honduras and Salvador.)
- Newfoundland*.....
- New Zealand*—(Territory includes Fiji and Western Samoa.)
- Peru*—(Territory includes Ecuador.).....
- South Africa*—  
Cape Town (territory includes Cape Province and Southwest Africa, Natal, Tanganyika, Kenya, Uganda, Mauritius, Angola and Madagascar).  
Johannesburg (territory includes Transvaal, Orange Free State, the Rhodesias, Mozambique or Portuguese East Africa, Nyasaland and the Belgian Congo).
- United Kingdom*—  
London.....  
  
London (territory covers Home Counties, South-eastern Counties and East Anglia; also British West Africa).  
London.....  
  
London.....  
  
Liverpool (territory includes North of England, Lincolnshire, North Midlands and North Wales).  
Bristol (territory includes West of England, South Wales and South Midlands).  
Glasgow (territory covers Scotland).....
- United States*—  
Washington.....  
  
Chicago (territory covers the Middle States of the United States).  
Los Angeles (territory covers the Mid-Western and Western States of the United States).  
New York City (territory includes Bermuda)...
- G. A. Newman. Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Life Insurance Building.  
F. W. Fraser, P.O. Box 225, Kingston. Office—Canadian Bank of Commerce Chambers.  
M. J. Vechsler, Commercial Attaché. Address for letters—Casilla 771, Santiago. Office—Bank of London and South America Ltd. Building.  
M. T. Stewart, Acting Trade Commissioner. Address for letters—c/o Royal Bank of Canada, Bogota.  
J. L. Mutter. Address for letters—Apartado 1945, Havana. Office—Royal Bank of Canada Building, Calle Aguiar 267, Havana.  
Richard Grew. Address for letters—P.O. Box 1770, Cairo. Office—22 Shari Kasr et Nil, Cairo.  
E. L. McColl, 66 Upper O'Connell Street, Dublin, Ireland; and 36 Victoria Square, Belfast, Northern Ireland.  
C. S. Bissett. Address for letters—Apartado Num. 126-Bis, Mexico City. Office—Edificio Banco de Londres y Mexico, Num. 30, Mexico City.  
R. P. Bower, Acting Trade Commissioner, Circular Road, St. John's.  
C. B. Birkett, Acting Trade Commissioner. Address for letters—P.O. Box 33, Auckland. Office—Yorkshire House, Shortland Street, Auckland.  
W. G. Stark, Acting Trade Commissioner. Address for letters—Casilla 1212, Lima. Office—Edificio Boza, Carabaya 831, Plaza San Martín, Lima.  
J. C. Macgillivray. Address for letters—P.O. Box 683, Cape Town. Office—New South African Mutual Buildings, 21 Parliament Street, Cape Town. Cable address—Cantracom.  
H. L. Brown, Acting Trade Commissioner. Address for letters—P.O. Box 715, Johannesburg. Office—Mutual Buildings, Harrison Street, Johannesburg. Cable address—Cantracom.  
Frederic Hudd, Chief Trade Commissioner in the United Kingdom, Canada House, Trafalgar Square, S.W.1. Cable address—Sleighing, London.  
J. A. Langley, Canada House, Trafalgar Square, S.W.1. Cable address—Sleighing, London.  
W. B. Gornall, Fruit Trade Commissioner, Canada House, Trafalgar Square, S.W.1. Cable address—Canfrucum.  
G. R. Paterson, Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W.1. Cable address—Agrilson.  
A. E. Bryan, Martins Bank Building, Water Street, Liverpool.  
James Cormack, Northcliffe House, Colston Ave., Bristol.  
G. B. Johnson, 200 St. Vincent Street, Glasgow. Cable address—Cantracom.  
H. A. Scott, Commercial Attaché. Office—Canadian Legation, Washington.  
M. B. Palmer, Tribune Tower Building, 435 North Michigan Avenue, Chicago.  
J. C. Britton, Acting Trade Commissioner, Associated Realty Building, 510 West Sixth Street, Los Angeles.  
D. S. Cole, Senior Trade Commissioner in the United States, British Empire Building, Rockefeller Centre, New York City. Cable address—Cantracom.

**Commercial Intelligence Journal.**—The "Commercial Intelligence Journal", containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either

edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the "Commercial Intelligence Journal".

### Section 3.—The War in Its Relation to Government Control of External Trade\*

In order that this chapter of the Year Book should explain more fully the influences that are bringing about the re-orientation of trade now taking place and reflected by the statistical tables in their resultant effect only, paragraphs describing the various controls that have been organized under such legislation as the War Exchange Conservation Act, the Enemy Trading Regulations, etc., are here introduced. Studied in conjunction with Section 1 on the tariff relationships existing between Canada and other countries, they will give to the student a more complete picture of the organization that has been established by the Government to cope with the special circumstances induced by the War.

#### Subsection 1.—Canadian War-Time Restrictions

**Enemy Trading Regulations.**—The "Regulations respecting Trading with the Enemy (1939)" were brought into force by Order in Council P.C. 2512 of Sept. 5, 1939, under and by virtue of the War Measures Act (R.S.C. 1927, c. 206). These, as amended, were replaced by "Consolidated Regulations respecting Trading with the Enemy (1939)" as provided in Order in Council P.C. 3959 of Aug. 21, 1940. Further, slight amendments to the Regulations were effected by Orders in Council P.C. 5353 of Oct. 3, 1940, and P.C. 9797 of Dec. 16, 1941. The regulations prescribe conditions governing enemy property and related subjects.

Because of occupation by an enemy State, or by reason of real or apprehended hostilities, the following were brought within the scope of provisions of the Enemy Trading Regulations:—

<i>Enemy or Proscribed Territory</i>		<i>Date</i>
German Reich.....	Enemy	Sept. 2, 1939
Austria.....	"	"
Moravia, Bohemia and Slovakia.....	"	"

State of North Borneo.....	"	Mar. 7, 1942
State of Sarawak.....	"	"
French Somaliland revoked.....		Mar. 10, 1943

The Regulations define "enemies" and "enemy territories". Attempts to trade with the enemy, and *proposals* or *agreements* to so trade are included under the general prohibition of such trading. Other offences included in the scope of the Regulations are: dealing in the property of enemies for the purpose of enabling them to obtain money or credit thereon; aiding or abetting any person, whether resident in Canada or not, to so deal in enemy property; knowingly discharging any enemy debt, promissory note or bill of exchange, or purchasing enemy currency.

Penalties for trading, or attempting to trade, with the enemy are quite severe; on summary conviction they extend to 12 months' imprisonment or a fine not exceeding \$2,000, or both fine and imprisonment; and upon conviction on indictment to imprisonment up to 5 years or a fine not exceeding \$5,000, or to both fine and imprisonment. Penalties for offences against the Regulations, other than actual or attempted trading with the enemy, are punishable by fine up to \$500, or 6 months' imprisonment, or by both fine and imprisonment.

In addition to the cessation of actual trading with the enemy, external trade is directly affected by the sequestration of enemy property, much of which is probably held for trading purposes. The Secretary of State is the Custodian of Enemy Property and such property, whether or not it has been disclosed, is vested in him by virtue of the Regulations, which confer on the Custodian all the rights that enemies themselves had in the property, including the form of dealing with such property in such manner as he may in his sole discretion decide.

The term "enemy property" includes such items as dividends and interest, insurance and bequests payable to such enemies.

**Control of Canadian Exports.**—The main purposes of export control during war-time are: (1) to prevent Canadian exports falling into enemy hands; (2) to conserve critical or strategic materials and supplies needed by Canada and the Allied Nations; (3) to aid in distributing available materials in the manner most advantageous to the carrying on of the War; and (4) to serve as a positive weapon in economic warfare—not only to help force the enemy to his knees by cutting off as many vital supplies as possible, but also to use as a bargaining power to secure supplies Canada lacks in exchange for commodities offered.

As the War has progressed, shortages, loss of established foreign sources of supply, shipping difficulties and other abnormal conditions of widely varied nature have made necessary the control of an ever-widening range of exports until at present

all commodities are under some degree of export control. Several Government Departments are concerned with various supplies but, in order to avoid delay and confusion, export control is centred in the Department of Trade and Commerce in its Export Permit Branch, which, before issuing permits, consults Departments or agencies especially interested in particular exports.

To co-ordinate policy in matters of economic warfare and international commercial relations, it was provided that the Export Permit Branch should consult the Advisory Committee on Economic Policy regarding principles to be followed in granting or refusing permits. Later, the Executive Sub-Committee of the Advisory Committee was established for the purpose of passing on applications for export permits involving matters of policy. This Sub-Committee meets usually once a week and provides a convenient and authoritative consulting body for the Export Permit Branch. In addition, there has been appointed recently the Export Planning Committee, the object of which, as the name suggests, is to make a survey of supplies available for export and the relative needs of importing countries, then in accordance with these surveys to lay out a definite program for Canadian exports.

During the past two years, a number of developments have made the problem of export control increasingly more complicated. Ocean transport and shipping difficulties have constituted major problems, making it necessary to allocate available shipping space in order of the essentiality of exports. Shipping priority ratings (to South American countries mainly) are given along with export permits granted, with a view to seeing that every inch of available space is utilized for essential exports only. Exports to blockade areas also are checked closely from every angle, and require communication with agencies in the United Kingdom as well as in this continent, while exports to neutral countries require careful checking of consignees. The application of price ceilings in Canada has brought with it the problem of higher prices abroad, offering a considerable inducement to Canadian firms to sell abroad rather than at home, making some form of export control unavoidable. The Canadian Government, in order to keep domestic prices as near normal as possible, has been paying substantial subsidies on many products which come, in the final analysis, from the Canadian taxpayer, and would be lost if these goods were exported without any check. As a result, several foods and other commodities have been placed under export control in order that subsidies may be recovered before export is allowed. Certain grains on which a drawback or equalization fee is payable on exports have also been placed under control for the purpose of collecting such fees.

Co-operation with the United States in the field of export control has also played an important part. Because Canada depends on the United States for a great percentage of her imports, especially since many foreign sources of supply have been cut off by the War, it is necessary that Canadian export control conform closely with that of the United States, in order that these imported supplies may not be exported from Canada to third countries in evasion of United States Export Control Regulations. During the past year, the inauguration of Decentralization Plan A by the United States with regard to Latin American destinations has also involved Canada, since practically all Canadian exports to Latin America pass through United States or travel by United States ships. The plan is to have the government of each importing Latin American country decide exactly what goods and quantities are essential and to issue 'Certificates of Necessity' accordingly to their importing firms. The government of the importing country then notifies United States export authorities, and arrangements are made for United States

and Canadian exporters to supply these orders. Thus, under Plan A, the furnishing of a Certificate of Necessity from the importing country by the Canadian exporter on application for a permit to export to Latin America is obligatory.

In addition to the above, a number of agreements regarding the pooling and allocation of food supplies by the United Kingdom, the United States and Canada have been arranged by the Combined Foods Board. A good example of this is the allocation of the combined stocks of dried, salted and pickled fish from these three countries under the direction of the Board. The United States, Canada and Newfoundland have also made arrangements whereby the United States and Canada will each supply certain of Newfoundland's needs. Here again export control is necessary in order to see that the agreement is properly carried out.

In actual practice, the procedure in the case of Export Permit applications is as follows: When applications for permits to export are received, the Export Permit Branch either submits them for direct checking to the appropriate Controller or Administrator of other Departments *re* supply, or, as in an increasing number of cases, checks the application against definite export quotas established for the particular product. These quotas are the result of careful study of available stocks, the military, civil and industrial requirements of Canada and the Allied Nations, normal pre-war trade with the countries concerned, special commitments to the United Kingdom (as in foods, for example) and various Allied Nations Supply Agreements. The application is also considered with regard to destination, in order to prevent any possibility of goods falling into enemy hands, and carefully checked as to consignee against existing lists of persons with whom trade is forbidden. If necessary, authorities abroad are consulted about the standing of the consignee.

**Control of Imports.—Restrictions.**—Canada's inability to convert surplus sterling assets into United States dollars led to a severe shortage of 'hard currency' early in the War. This necessitated curtailing non-essential imports from the United States and other non-Empire countries, while encouraging imports from sterling areas. The War Exchange Tax (June 25, 1940) provided for a 10 p.c. tax on the value for duty of all imports from non-Empire countries and the War Exchange Conservation Act (Dec. 2, 1940) prohibited the import of a long list of consumption goods that were regarded as non-essential or that could be obtained from within the sterling area in sufficient volume to meet essential requirements. In addition, the Act made certain other products (chiefly cocoa beans, bananas, peanuts, raw tobacco, petroleum, business machines, trucks, buses, hardwood, raw furs and silk) subject to import licence. There has been some relaxation of these restrictions, mainly in regard to consumer goods in short supply. These measures were supplemented by high excise taxes on many of the durable consumer goods affected (automobiles, radios, refrigerators, etc.), the main purpose being to discourage expansion of their manufacture in Canada as imports were eliminated or curtailed.

The principle underlying all restrictions is that war production must be facilitated, rather than hindered, by the controls adopted. Officials of the Department of National Revenue, who administer the War Exchange Conservation Act, maintain close contact with controllers and administrators regarding import requirements. Imports of certain products (wool, sugar, etc.) have been specifically placed under the control of Administrators and in the case of machine tools and certain strategic materials (silk, rubber, etc.) imports are largely channeled through Government-owned companies. Finally, increasing integration of the priority systems of Canada

and the United States and the recent formulation of import shipping priorities, in order to reserve limited shipping space for the most essential requirements, represent other important aspects of war-time import restrictions.

*Subsidies and Tariff Adjustments.*—The War Exchange Conservation Act facilitated imports from the United Kingdom. Duties on United Kingdom cottons, artificial silks and certain other goods were removed and (on Apr. 30, 1941) imports from the United Kingdom were allowed discounts from the British Preferential Tariff of 25 p.c. on woollens, boots and shoes and 50 p.c. in the case of almost all other goods, except liquor. These tariff adjustments tended to counterbalance restrictions against certain imports from the United States and to help British importers overcome the disadvantage of rising production and transportation costs; at the same time they enabled Canada to utilize some excess sterling balances. The imposition of the retail price-ceiling on Dec. 1, 1941, necessitated further measures of this type to ensure a continued flow of essential imported goods for sale in Canada. The Wartime Prices and Trade Board assured importers that, where necessary, in view of the rising prices abroad, assistance would be provided to them either directly by subsidies provided through the Commodity Prices Stabilization Corporation, or indirectly by reduction in duties and taxes on imported goods, to enable the price-ceiling to be maintained. As preliminary measures, on Dec. 22, 1941, all special or dumping duties on imported goods (except fresh fruits and vegetables) were removed and the Minister of National Revenue was authorized by Order in Council to accept the export selling price as the basis of valuation for duty purposes in the case of commodities that are recommended to receive such treatment by the Wartime Prices and Trade Board with the approval of the Minister of Finance. In addition, on Jan. 20, 1942, an Order in Council provided that import and excise duties imposed in any country from which Canada imports goods would be disregarded in estimating the value for duty purposes.

The general principle underlying all import subsidy arrangements is that consumer goods imported will cost the importer no more than is 'appropriate' in relation to ceiling-prices. The importation of war supplies has, of course, been exempted from the operation of the ceiling and of import price control.

### **Subsection 2.—Empire and Foreign Import Restrictions Affecting Canadian Exports**

The War automatically terminated Canadian trade with enemy or enemy-occupied countries. With the rest of the world, the outgoing commerce of Canada is to a large extent affected by controls in force in many countries which subject imports to the requirement of licence from governmental authorities, quota limitations, restrictions on issue of exchange for payment of merchandise and related official supervision of purchases from abroad. Restrictive measures of this kind vary in different territories and, taken on the whole, undergo frequent modifications.

#### **EMPIRE COUNTRIES**

**United Kingdom.**—The United Kingdom passed the Import, Export and Customs Powers Defence Act on Sept. 1, 1939. Two days later, when war was declared, specified goods were prohibited to be imported except under licence of the Board of Trade. The object was to conserve shipping and financial resources by refusing permission to import non-essential goods. Motor-cars, furs, jewellery, perfumery, toys, electric-light fittings and certain chemicals were, at the outset, among the articles not to be licensed until further notice. Thirty-three licensing

orders were issued during the ensuing nine months. Then, a consolidating order of June 10, 1940, subjected all imports (except live quadruped animals) to the requirement of licence. The intensified control thus created was relaxed to some extent by "open general licences" which permitted importation of specified goods without licence for each shipment. Many of these open licences were later withdrawn. For example, cod-liver oil, wet-salted fish, asbestos, undressed fur skins, natural and artificial graphite, gold, nickel and silver ores and concentrates, raw rubber, canvas hose pipes, wood tool handles, and some classes of chemicals and also, if imported from British Empire countries, biscuits, buttons, essential oils, mica and hard soap were at first under open licence, but by June 30, 1942, this list was reduced to gold and Empire nickel. Control exercised over exports necessitated about 154 orders to the end of 1943. Under the Emergency Powers Defence Act, 1939, numerous orders were made regulating or prohibiting production, distribution, consumption and prices of goods and services.

**Eire.**—Quota restrictions in Eire imposed under the Control of Imports Acts 1934-37 were temporarily suspended during the calendar year 1943 as regards rubber-proofed apparel, tires and tubes, rubber footwear, silk and rayon stockings, certain cotton and wool fabrics, laminated springs, brushes, brooms, mops, sparking plugs, perambulators, electric filament lamps and specified fertilizers, and were continued on leather boots and shoes, hats and caps, metal screws and motor-vehicles. Under an Emergency Powers Order, 1939, imports of timber, salt, coffee, wine, linen fabrics, and yarns and fabrics of cotton, wool, silk or artificial silk, became subject to licence by the Minister of Supplies. Scheduled banks are authorized to allow payments abroad to meet reasonable requirements, subject to any direction given by the Minister of Finance.

**Australia.**—In administering an import licensing system adopted in Australia on Dec. 1, 1939, the general tendency has been to permit imports according to degrees of essentiality of the goods. Due to lack of shipping facilities, newsprint supplies, which in the case of large publications had been rationed on July 1, 1940, to 35 p.c. of the previous year's consumption, were reduced on Nov. 15, 1942, by 15 p.c. of the consumption during the second and third quarters of that year. During 1942 and 1943 many articles were placed under "administrative control" to obtain more flexibility in licensing. The Division of Import Procurement in the Department of Trade and Customs controls issue of licences and the distribution of commodities rationed for civilian purposes and determines shipping priorities.

**New Zealand.**—Licence control over imports instituted in New Zealand, on Dec. 7, 1938, to conserve overseas exchange has continued with modifications. Regulations announced in September, 1943, to operate during 1944 established three categories of goods to be admitted up to 50 p.c. of the 1940 level. One category was made up of goods to be admitted from the United Kingdom and Crown Colonies only; another from British countries only; and a third from any country. A fourth group was to be licensed from all sources up to 100 p.c., and a fifth when each individual importation could be approved on its merits. Goods normally prohibited constituted a sixth class, of which examples were leather gloves, vacuum cleaners, sewing-machines, washing-machines, long-handled shovels, veneers and plywood. Due to scarcity abroad of essential articles, whose release called for government sponsorship, certain goods were to be imported through the Ministry of Supply, created at the outbreak of war, and which opened Missions abroad to procure supplies.

**Union of South Africa.**—Import restrictions adopted in the Union of South Africa on Sept. 15, 1941, subjected imports from non-sterling countries to licence control and listed goods under some 40 of the 335 items of the tariff as not eligible for licence. These restrictions were extended on May 7, 1942, by enlargement of the non-eligible list to 66 items and by limiting essentiality certificates necessary to obtain shipping space to goods bearing priority from 1 to 8 in ratings which ran up to 17. About 200 articles were specified as essential for general sale and, as regards imports from Canada or the United States, it was stated licences would be confined to these. During 1942, acquisition and use of many basic materials and essential articles were brought under supervision of various controllers. Most existing economic controls were superseded on Feb. 1, 1943, by a National Council of Supplies whose functions are to advise on production, supply, import, export and priority in which goods were to be shipped to the Union.

**India.**—The character of India's import trade was much affected by the spread of licensing control, first applied by a regulatory measure of May 20, 1940. Non-sterling exchange is released for payment of purchases only when import permits are available. The Import Trade Controller at Bombay on June 22, 1942, cancelled various licences for importation from the United States, Canada and Newfoundland unless they were revalidated by the licensing authorities. It was announced that licences would be issued or renewed only in cases where imports were essential, either for direct war purposes or to maintain the civil population. For the guidance of traders, numerous articles were designated as being considered non-essential except under special circumstances.

**Southern and Northern Rhodesia.**—Restrictions in Southern Rhodesia were introduced against non-Empire trade early in 1941 and, on Jan. 1, 1942, imports from all sources became subject to import licence. All goods entering Northern Rhodesia were made subject to import licence on May 3, 1941. Many were allowed from the sterling area under Open General Licence, and some from all countries, but since Oct. 24, 1941, except for about a dozen items, imports from Canada required individual licences.

**Colonial Empire.**—Import trade of nearly all Crown Colonies has been under licence control since the early days of the War. Prevailing policy has been to confine imports to vital requirements. In several instances the Colonies have issued schedules of goods regarded as unnecessary imports. Instructions of June 5, 1941, from London to Colonial administrations emphasized the need for strict exclusion of goods not of an essential nature. A West Indian Conference held in August, 1941, resulted in introducing stricter import regulations in that area. At another conference in May, 1942, British West Indian authorities met British, Canadian and United States shipping and supply officers to discuss the problem of obtaining supplies of essential goods. A system of commodity priorities in shipping space was developed and enforced through the medium of the British Colonies Supply Mission at Washington. In most West Indian Colonies, government bulk purchasing, as already applied to semi-manufactured iron and steel, was extended to machine tools, non-ferrous metals, rubber products, lubricants, drugs and chemicals.

#### THE UNITED STATES

A General Import Control Order (M-63) of Dec. 28, 1941, in the United States was extended on July 2, 1942, so that only a Government agency was allowed to import certain specified materials without authority of the Director of Industry Operations. Lists I and II enumerated many previously controlled strategic

materials and List III numerous articles for civilian use. The War Production Board stated that the purpose of List III was to halt waste of shipping space on unessential commodities. If shipped overland, by air or by internal waterways from Canada, Mexico, Guatemala or El Salvador, such goods were exempted from this import control. A Presidential Proclamation of Apr. 29, 1943, removed purchases by the War Food Administrator or any agency designated by him from the scope of an import quota limitation created by a Presidential Proclamation of May 29, 1941, of 800,000 bu. of wheat and 4,000,000 lb. of flour per year. Of these quotas, 795,000 bu. of wheat and 3,815,000 lb. of flour were allocated to Canada each year. Export of defence materials had been governed by an Act of July 2, 1940. The Board of Economic Warfare on Dec. 23, 1941, applied export control to all goods, although general licences had been issued covering practically all shipments to Canada. On Oct. 6, 1942, the Board removed its licence requirements affecting Canada. This action limited control of goods for Canadian destinations to arms, ammunition and implements of war as listed in the President's Proclamation of Apr. 9, 1942, and to tinplate scrap, helium gas, gold and narcotics.

#### CERTAIN SOUTH AMERICAN COUNTRIES

**Argentina.**—More favourable rates of exchange are granted in Argentina for primary or secondary essentials than for luxury and semi-luxury goods. The Central Bank reported that a little more than half the imports in 1942 were purchased at the most favourable rate for the peso, about 27 United States cents, and over one-third at about 24 cents. Six per cent of the imports were made through a Trade Promotion Corporation for which the peso had a varying purchasing power, that went as low as 21 cents. Two per cent were paid for by auctioned exchange, the peso averaging 20 cents. A prohibition against certain luxury goods from countries in the dollar area was removed on May 12, 1942.

**Brazil.**—After being in operation for three years a Brazilian decree-law creating a National Economic Defence Commission with power, among other things, to regulate imports and exports, was abolished by a decree-law of Sept. 28, 1942, which appointed a Co-ordinator of Economic Mobilization in the person of Joao Alberto Lins de Barros, former Minister to Canada. The Co-ordinator was given power to control, through the Export-Import Department of the Bank of Brazil, imports and exports of raw materials and manufactured goods, as well as prices of goods and related matters. Foreign exchange control in Brazil, the subject of various regulatory measures in the decade before the War, was, by a decree of Dec. 23, 1937, made a monopoly of the Bank of Brazil. This control lasted until Apr. 8, 1939, when another decree authorized purchase of exchange in the open market for payment of imported goods. The latter decree has governed exchange transactions since the outbreak of war. Supervision is exercised by the Bank of Brazil. One of its requirements in regard to imports is presentation of documentary evidence of actual importation of any goods for which foreign exchange is to be released.

**Chile.**—As in former years, imports into Chile continued subject to an exchange permit being issued through local banks, under the supervision of the Exchange Control Commission. The prevailing or so-called 'free' rate of exchange was 31 pesos to the United States dollar but on a few essential articles the exchange, or a percentage of it, was issued at 25 pesos to the dollar. In the early part of 1943 it was reported that commercial banks had been able, at all times, to satisfy demands for the necessary exchange to import goods.

**Colombia.**—In Colombia, under a Decree of Apr. 8, 1940, exchange was provided at an official or comparatively low rate for goods of prime necessity. Other goods were graded into three groups in order of essentiality to be purchased at exchange premiums ranging from  $2\frac{1}{2}$  p.c. to 12 p.c. over the official rate. The Colombian Office of Exchange and Export Control on Apr. 7, 1943, lowered these premiums so that the highest was less than 2 p.c.

**Ecuador.**—A system of strict exchange control re-introduced in Ecuador on June 3, 1940, required importers to make application for exchange before placing orders abroad. The customs and parcel-post offices will not deliver imported goods unless proof is furnished that the covering exchange has been obtained through the Central Bank of Ecuador. When this is granted, the Central Bank makes exchange available to the order of the importer for payment against shipping documents.

**Peru.**—Through a semi-voluntary system, Peruvian exporters turn over their foreign exchange to the Central Reserve Bank which allocates it to commercial banks in a rough proportion to their normal dealings. From July 14, 1942, authority from the Ministry of Finance was necessary to obtain imported steel, iron and tinplate, and soon afterwards the Ministry of Public Works ordered an inventory of all scrap iron in Peru. In compliance with a Decree of Oct. 9, 1942, possessors of rubber and its derivatives were called upon to report stocks of these products to a Corporation with exclusive authority to buy and sell. A Decree of May 28, 1943, required authorization of the Ministry of Finance for import of raw cattle hides.

**Uruguay.**—The Government of Uruguay allots quotas of foreign exchange based on purchases from Uruguay. Approved essentials were given a preferred rate. Other goods were imported at a 'free' rate. Up to 1941 the free rate was as much as 16 p.c. higher than the preferred rate but afterwards came down to near the same level. On June 4, 1942, the Central Bank of Uruguay announced that imports from Canada, the sterling areas, United States, other American countries, and also non-American countries with agreements in force, so long as they have quotas at their disposal, would be financed at the preferred rate.

**Venezuela.**—Exchange regulations, adopted in Venezuela in November, 1937, were extended on Oct. 25, 1940, subjecting all imports to licence, issue of which at a controlled rate depended on importance of the article and amount of exchange available. Permission to import at an uncontrolled or free rate of exchange, without import licence, was authorized on July 23, 1941. Free exchange at that time cost the importer about 15 p.c. more than controlled exchange. Early in 1942 the controlled and free rate approached the same level. The controlled exchange market and exchange licensing were terminated on May 18, 1942, with the reservation that certain goods to be designated by the Minister of Finance might continue to require licences.

## PART II.—STATISTICS OF EXTERNAL COMMODITY TRADE\*

Important changes have been made in the arrangement of the material dealing with commodity trade in recent editions as compared with editions prior to that of 1941. Statistical tables are now distributed throughout the explanatory and analytical text. The principal summary and detailed statistics were compiled on a calendar-year basis for the first time in 1939 and comparative figures have been

\* Statistics were revised under the supervision of L. A. Kane, Chief, External Trade Branch, Dominion Bureau of Statistics. For a complete list of the publications of this Branch, see Chapter XXX, Sect. 1, under "External Trade".

carried back for varying periods. An effort has been made to preserve continuity with statistics of former editions in spite of slight lack of comparability involved in the change from a fiscal-year to a calendar-year basis. Exports of non-monetary gold, formerly included, have been excluded from all export statistics, as explained in greater detail at pp. 451-452.

The outbreak of the War, in September, did not greatly affect the trade figures for 1939 as a whole, although its influence should be kept in mind in any analysis of trade with European countries involved. The statistics in the present edition of the Year Book, which bring the analyses down to the end of 1942, reflect the changing conditions in the trade economy of Canada, as exemplified by the increase in exports of foodstuffs to the United Kingdom and the importation of machine tools, followed later by the export of munitions and transport vehicles to the United Nations.

**General Explanations Regarding Canadian Trade Statistics.**—External trade statistics are derived by recording the physical movement of goods outwards or inwards across the frontiers or through ocean ports and the valuations placed upon them at the time of movement. Such statistics cannot take cognizance of the complex financial transactions involved in this physical movement of goods, which transactions may take place prior to or subsequent to the actual shipment (although in investigating the balance of international payments, as in Part III of this chapter, such financial transactions are the sole consideration). Certain problems of procedure arise in recording trade statistics and it is necessary to explain these.

For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of terms used, as well as certain features of the statistics that necessitate adjustments to the external trade figures, be carefully kept in mind, if the true position of trade in relation to the total of Canada's international transactions is to be understood.

*Quantities and Values.*—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

*Imports: Valuation.*—"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the time when, said merchandise was exported directly to Canada; but the value shall not be less than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling and profit. (See Sects. 35 to 45 of the Customs Act.) Under these provisions and amendments thereto, some imports are given arbitrary valuations differing from those upon which actual payments for the imports are made.

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Sect. 55 of the Customs Act and Orders in Council respecting currency valuations.) Differences arising from fluctuations in the exchange rates of foreign currencies are treated more fully below under the heading "Discrepancies in Trade Statistics between Canada and Other Countries".

*Canadian Exports: Valuation.*—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminium extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

*Foreign Exports: Valuation.*—"Foreign produce" exported consists of foreign merchandise that had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence dispatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market at London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, i.e., the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:—

1. Differences in the basis of the Canadian valuations and those of the valuations of other countries.

Disturbed currency relations between countries introduces an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at \$4.86½ to the £, although for two years after Sept. 21, 1931, the actual value of the £ was below that figure, dropping as low as \$3.70, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. More recently, when the exchange value of the £ was above par, imports from the United Kingdom were undervalued. Similar difficulties have resulted from disturbances in exchange levels with other countries, and the placing of arbitrary valuations upon their currencies.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1935, in connection with distilled spirits, an important item in imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the excise duty in addition to the British export valuation, an excess valuation aggregating over \$200,000,000 for the period 1920-34. The excise duty has been excluded from the valuation of such imports since Apr. 1, 1935.

2. Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and the end of the period.

3. By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries (38.6 in 1942) is shipped via the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada.

**Treatment of Gold in Trade Statistics.**—The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

The publication of statistics showing the *gross* imports and exports of gold has been temporarily suspended as from September, 1939. Trade statistics for periods prior to this time have been revised accordingly, to exclude all gold formerly included in the total of merchandise exports.

Statistics showing the *net* exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.

In previous years a historical table was published showing the movement of coin and bullion in each year since 1868. In the 1940 Year Book this table appears at p. 528. Since the outbreak of war in September, 1939, information as to the movement of gold has not been available.

#### NET EXPORTS OF NON-MONETARY GOLD, 1939-43

Month	1939	1940	1941	1942	1943
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000
January.....	18.1	21.6	19.2	15.1	13.9

TOTALS.....	184.4	203.0	203.7	184.4	142.0

### Section 1.—Historical Statistics of Canadian Trade

In editions of the Year Book prior to that of 1941, figures for Tables 1 and 2 are given for each year since Confederation. Table 1 now starts with 1919, the first year for which statistics are available on a calendar-year basis, and Table 2 commences with the statistics for 1911. Figures for earlier years are given at pp. 526 and 529 of the 1940 Year Book.

#### BALANCE OF TOTAL MERCHANDISE TRADE (EXCLUDING GOLD) FOR CANADA 1868 - 1943

## 1.—Trade of Canada (Excluding Gold) with All Countries, 1919-43

NOTE.—These figures are available on a calendar-year basis only since 1919; for figures for the fiscal years 1868-1919, see the Canada Year Book, 1940, p. 526.

Year	Imports			Exports			Balance of Trade: Excess of Exports (+), Imports (—)
	Dutiable	Free	Total	Domestic Produce	Foreign Produce	Total	
	\$	\$	\$	\$	\$	\$	\$
1919....	607,458,191	333,555,422	941,013,613	1,235,958,483	53,833,452 <sup>1</sup>	1,289,791,935 <sup>1</sup>	+348,778,322 <sup>1</sup>

<sup>1</sup> Revised since the publication of the 1942 Year Book.

## 2.—Duties Collected on Imports, with Percentages of Expense of Collection to Gross Customs Revenue Collected, Fiscal Years 1911-43

NOTE.—The figures in this table are the gross figures of duties collected; the net national revenue from customs taxation, because of the drawbacks paid, is considerably smaller. For net customs revenue, see statistics of revenue from customs duties in the historical revenue table in Chapter XXIII on Public Finance. Figures of duties collected on imports from 1868-1910 and of duties collected on exports from 1868-92 are given at p. 529 of the 1940 Year Book. Duties were not collected on exports after 1892.

## Section 2.—Geographical Distribution of Canadian Trade

Since Confederation the records of Canadian trade have emphasized the importance of trade relationships with the United Kingdom and the United States. In the early years of the Dominion, when the United Kingdom was lending Canada capital on a considerable scale, that country supplied more than half of the Canadian imports, even though, as a purchaser of Canadian goods, she took second place to the United States. To-day, though there have been vast changes and shifting trends, Canadian trade is still carried on predominantly with these two countries.

### Subsection 1.—Canada's Place in the World Economy

An outline of Canada's place in the world economy before the outbreak of war is given at pp. 404-408 of the 1941 Year Book.

### Subsection 2.—Changes in Distribution Brought About by the War\*

The War has altered the structure of world trade and Canada, being a leading trading nation, has been immediately affected. The Government controls of trade and the exchange restrictions that it has been found necessary to impose (see pp. 441-445) indicate some of the impediments that exist in the international trade field under present war conditions.

The main transformation has, of course, taken place in trade with belligerent countries. With the Allied Nations, especially with the United Kingdom (exports) and the United States (imports and exports) trade has bounded forward, and with neutral countries within the present trading area a satisfactory level has been maintained considering all existing conditions. With enemy countries, however, including all the extensive occupied areas, trade is entirely cut off and the resulting situation is one of great abnormality.

The relaxation, early in 1944, of censorship restrictions (in force since the beginning of the War) concerning the publication of information regarding the destination of exports from Canada and the sources of imports into Canada makes it possible to secure a more detailed picture of the phenomenal expansion of Canadian trade, particularly of exports, during the war period. While the great bulk of exports goes to the countries most definitely engaged in the United Nations war effort, there are approximately fifty countries to which the Dominion is exporting goods in varying but steady quantities, in spite of war handicaps.

In 1943 Canada's export trade amounted to \$3,001,352,279: this was two and one-half times greater than in any year of the War of 1914-18 and three times greater than in 1939. Exports alone during 1943 were considerably higher than total external trade in 1939 and total trade was three times higher than in the last pre-war year. Trade figures by months from January, 1940, to the latest month available in 1944, together with summaries of exports by principal commodities and by countries for 1943 are given in Appendix I to this volume.

Marked changes have characterized the trade of the Dominion since 1939. The Minister of Munitions and Supply has thus described the industrial changes and adjustments of the war years: "The first year of war, 1940, was a year of planning

\* All figures for 1943 given in this Subsection are preliminary and subject to revision.

and small beginnings with the first trickle of war supplies from a few sources only in evidence towards the end of that year. The next year, 1941, was one of construction, conversion and expansion—of vastly broadened plans and quickened output. Then followed a year of steadily rising production, of objectives reached and passed in the face of perils, problems and confusion. The year 1943 recorded an output so heavy that industrial capacity and manpower were strained to the limit, employment reached an all-time high even though under the altered tide of war shifts and changes had to be made in the production flood.”

These changes are reflected in the trade returns, and the following statement, which summarizes the expansion of exports and war industries from 1939 to 1943 lists those foods, munitions and war materials that have mainly influenced the result. The twenty-two items listed comprise 85 p.c. of the total value of all Canada's exports during 1943.

## EXPORTS OF FOODS, MUNITIONS AND WAR MATERIALS, 1939-43

(In millions of dollars)

<sup>1</sup> Subject to revision.

In the year, 1943, 75 p.c. of all exports were declared as war materials. A further interesting insight into Canada's present-day economic and industrial development is that prior to the War of 1914-18 a large proportion of Canadian exports were raw or only semi-manufactured goods, whereas to-day the larger bulk of exports are fully finished. In this year 34 p.c. of all exports went to the United Kingdom and 13 p.c. to other countries of the British Commonwealth: 39 p.c. to the United States and 14 p.c. to other countries.

The percentage analysis of imports for the same year shows that only 8 p.c. came from the United Kingdom and 6 p.c. from other Empire countries. The vast proportion of Canada's imports in that year came from the United States, amounting

to 82 p.c., and only 4 p.c. came from other foreign countries. As the War has progressed the trend of imports from the United Kingdom has been definitely downwards, and upwards from the United States.

An analysis of the exports to countries outside of the actual war zone indicates that as compared with 1939 there has actually been little slackening—and in some cases an increase—in the exports. This is particularly true in connection with most of the Latin American countries, as the following statement shows.

CANADIAN EXPORTS TO LATIN AMERICAN COUNTRIES, 1939-43, AND FOR THE MONTHS OF JANUARY, 1939 AND 1944

It would appear that Canada, in addition to making a tremendous contribution to the needs of the United Nations, is, in the meantime, endeavouring to fill many of the most urgent needs of the neutral countries.

Trade figures are not, of course, available for many countries for the war years. Table 3, however, gives figures, so far as possible, for twelve principle trading countries and shows Canada's high position among these countries in per capita trade.

# IMPORTS FROM AND DOMESTIC EXPORTS TO THE UNITED KINGDOM, THE UNITED STATES AND OTHER COUNTRIES

1925-43

### Subsection 3.—Trade by Continents and Leading Countries

**Trade by Continents.**—The large increase in Canada's imports in 1942 was not contributed to in equal measure by all continents, the effect of the War on the re-orientation of the channels of trade being shown in Table 4. A large part of the increase in imports was occasioned by the necessity of importing raw materials and finished parts for the vast flow of munitions of war to the United Kingdom and other parts of the Empire. As would be expected, a severe decline occurred in imports from Continental Europe, the percentage having dropped from 4.9 p.c. in 1939 to 0.3 p.c. in 1942. On the other hand, North America supplied 81.4 p.c. of Canada's imports in 1942 as compared with 68.4 p.c. in 1939. In spite of the submarine menace, the United Kingdom managed to supply 9.8 p.c. of Canada's imports as compared with 15.2 p.c. in the previous year; the dollar value of such imports decreased from \$219,400,000 to \$161,100,000 or by 26.6 p.c.

As regards exports, United States, which led in 1939, gave place to the United Kingdom in 1940 and 1941, owing largely to the export of munitions of war, but resumed first place in 1942. The same traffic accounted for the increases in the percentages of Canada's exports to Africa, Asia and Oceania. Other North America (chiefly Newfoundland), after reaching a high point of 4.8 p.c. in 1941, declined to 4.0 p.c. in 1942 and exports to South America declined from 1.9 p.c. of the total in 1941 to 0.8 p.c. in the latest year.

<sup>1</sup> Less than \$1,000.

**Imports from Principal Countries.**—The percentage of imports from countries from which Canada obtains important industrial materials is tending to rise owing to increased industrial activity in the Dominion. Particularly notable are the increases in the amounts purchased from the United States, Empire countries and the Latin Americas. In Table 6 will be found the values of imports from all important countries in recent years.

**Exports to Principal Countries.**—The United States and the United Kingdom together took 68·8 p.c. of Canada's exports in 1942. While exports to countries in the belligerent zones were curtailed after the outbreak of war, the subsequent dispatching of munitions and other supplies of war to Newfoundland, Australia, New Zealand, British India, Egypt, Iraq and Russia resulted in vast increases being shown in Canadian exports to those countries. In Table 7 will be found the values of exports to all important countries in recent years.

It should be carefully noted that in the figures of Canadian exports, by countries, all the goods shown as exported to certain countries may not finally be consumed in those countries, while, on the other hand, some countries may ultimately buy and consume more Canadian goods than the Canadian export statistics indicate. In many cases the country of final destination is not known at the time when goods leave Canada and, therefore, exports to countries such as the United Kingdom, which carries on a large entrepôt trade, are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries, such as Switzerland (which obtains Canadian goods indirectly), would be correspondingly higher than the Canadian export statistics indicate.

#### Subsection 4.—Trade with the United Kingdom and the British Empire

**Trade with the United Kingdom.**—As already mentioned in the introduction to this Section and in Subsection 1, the trade of Canada for many years has been carried on predominantly with the United Kingdom and the United States, both great trading countries, whose people speak the English language, and with whose standards of living and tastes Canadians have much in common. The fluctuating positions of the two countries in this regard, from Confederation to the outbreak of the Second World War, are discussed at pp. 414-415 of the 1941 Year Book.

In 1940 the United Kingdom regained the position as the chief market for Canadian exports which she had held since 1932, with the single exception of the year 1939; this position was retained in 1941, but in 1942 the United States became Canada's best customer. War-time demand for foodstuffs, wood products, military vehicles and munitions was the chief cause for the increase of nearly 13 p.c. in 1942 over 1941.

The values and proportions of import and export trade with the United Kingdom for certain fiscal years ended 1886 to 1921 and for the calendar years from 1926 are shown in Table 8. Details of the commodities that made up that trade in the calendar years 1941-42 appear in Tables 16 and 17 of this chapter.

**Trade with the British Empire.**—Generally, such trade has been marked by a larger proportion of exports than of imports. The percentage of both import and export trade with the Empire, other than the United Kingdom, has increased considerably in the period covered since 1886. The industrial organization of Canada draws increasing imports of raw materials from other Empire countries, which in turn provide an expanding market for Canada's manufactured and specialized products. A record of the value and proportion of trade with the British Empire for representative years since 1886 is given in Table 8.

**The Preferential Tariff and Empire Trade.**—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. The British West Indies receives special concessions under the Agreement of 1925 referred to at p. 385 of the 1941 Year Book.

The British Preferential Tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When this preference became effective in 1897, Canada's total imports from the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British Preferential Tariff, the downward trend in the value of imports from the United Kingdom was reversed, although the proportion of total imports coming from the United Kingdom continued to decline. Imports from other Empire countries, which were insignificant before the beginning of the century, have increased both in actual value and proportion of total imports.

**Average Rates of Duty under the British Preference.**—Table 11, at p. 468, shows the average ad valorem rates of duty on imports from the United Kingdom, United States and all countries in each year since 1919. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British preference but dutiable when imported from the United States should be added to the dutiable imports from the United Kingdom. After these adjustments are made, the average rate of duty on imports from the United Kingdom is lower for each year since 1922, and the difference in favour of the United Kingdom is 50 p.c. or more in recent years. This subject is treated in more detail at pp. 509-510 of the 1937 Year Book.

## 9.—Dutiable and Free Imports from Principal British Empire and Foreign Countries, 1941 and 1942

NOTE.—This table and that at pp. 418–419 of the 1941 Year Book and pp. 457–458 of the 1942 Year Book, continue the series appearing as Table 17 or 18 of the External Trade chapter of former Year Books, but the division between General, Preferential and Treaty Tariffs is not available after Mar. 31, 1939.

<sup>2</sup> Revised since the publication of the 1942 Year Book.

**Subsection 5.—Trade with United States and Other Foreign Countries**

The relative importance of the United Kingdom and the United States in the trade of Canada from Confederation to the outbreak of the Second World War is discussed at pp. 414-415 of the 1941 Year Book.

Since the outbreak of the War there has been a sharp expansion in imports from the United States. Although most of this has been in iron and its products, increases have been general in other groups. To a large extent this rise is a reflection of the war expenditures of the Dominion Government. The large volume of British purchases in Canada has also contributed to the rise since the United States is the source of many of the parts and materials required as well as of machine tools and other capital equipment employed in new kinds of production. Furthermore, the increased volume of industrial activity accompanying the War has enhanced the national income with the result that the greater demands for consumer goods have also led to increased imports from the United States.

While Canada's exports to the United States have also increased since the start of the War, this increase has not been as great as in the case of imports, the percentage increases for 1942 as compared with 1939 being 162.6 for imports and 133.6 for exports. The exchange situation as it has developed since the War is described in the section on the balance of international payments (see p. 494).

A record of the value and proportion of trade with the United States since 1886 is given in Table 8, pp. 464-466. The commodities of Canadian export and import trade with the United States are shown in Tables 16 and 17, pp. 478-480.

**Canadian Trade via the United States.**—Imports from overseas countries via the United States have declined steadily in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the Preferential Tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported via a Canadian sea or river port in order to obtain the full benefits of special rates of duty. This provision was cancelled so far as wheat is concerned, under the United Kingdom-United States Trade Agreement that came into effect Jan. 1, 1939. Between 1920 and 1939 imports via the United States decreased from 9.5 p.c. to 2.7 p.c. of the total imports from overseas countries but in 1940 they rose to 4.6 p.c., to 8.8 p.c. in 1941 and to 15.7 p.c. in 1942.

The proportion of exports from Canada to overseas countries going via the United States showed a considerable decline between 1927 and 1939, the percentages by fiscal years being: 1927, 39.4; 1930, 33.7; 1932, 18.7; 1935, 17.3; 1936, 18.4; 1937, 16.5; 1938, 11.4; and calendar year 1939, 10.8. In 1940, owing to war conditions, they rose to 14.4 p.c. and to 22.1 p.c. and 38.6 p.c., in 1941 and 1942, respectively.

 totals of Tables 6 or 7 less United States imports or exports.

<sup>3</sup> Percentage worked out on

**Trade with Other Foreign Countries.**—During the First World War and the years immediately following when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion, while those from other foreign countries declined. The proportion of imports from other foreign countries has remained surprisingly constant, at about one-tenth to one-eighth of total imports, over the period of nearly half a century, until a declining trend became evident again in the disturbed European conditions preceding the outbreak of the present war. Canadian exports to other foreign countries increased from 4.5 p.c. in 1886 to 23.0 p.c. in 1928 but they have since declined, and in 1940 amounted to 6.8 p.c. of the total value of exports; war-time exports to Egypt, Iraq and Russia caused the percentage to rise to 13.7 in 1942. A record of the value and proportion of trade with other foreign countries since 1886 is given in Table 8, pp. 464-466.

### Section 3.—Commodity Analyses of Canadian Trade

#### Subsection 1.—Trade of Canada by Main Groups

The expansion in Canada's trade that followed the depression of the early '30's experienced some interruption in 1938 but was continued in 1939 and 1940. The impact of the War on the Canadian economy resulted in an increase in both imports and exports. In 1941 imports showed increases in both value and volume in all groups except animals and products and wood and paper; in 1942, decreases were shown in the value of agricultural and vegetable products, iron and its products and non-ferrous metals, and in the volume of animals and products, wood and paper and chemicals and allied products, in addition to the three groups whose value had decreased.

Exports showed increases in both value and volume for all classes in 1941 (see Table 18, p. 480); in 1942, decreases were shown in the value of agricultural and vegetable products and in fibres and textiles, also in volume for these two groups and in wood and paper and chemicals and allied products. The group "miscellaneous commodities", which includes such items as aircraft, ships and shells, increased by 307 p.c. over 1941 and accounted for 22.2 p.c. of the total value of exports in 1942.

In the export trade the relative positions of the groups altered considerably, the miscellaneous commodities group advancing from sixth to first place and the iron and products group advancing to second place from fourth, the wood and paper group fell to third from first place, the non-ferrous metals group to fourth from third, the agricultural and vegetable products group to fifth from second, and the animals and products group to sixth from fifth. Chemicals and allied products, non-metallic minerals and fibres and textiles occupied the seventh, eighth and ninth places, respectively, in both years.

Subsection 2.—Principal Commodities Imported and Exported

**Canada's Principal Imports.**—In the interpretation of the trends in imports, it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices, on the 1926 base, was 59.3 in the calendar year 1889, 52.1 in 1899, 59.5 in 1909, 134.0 in 1919, 86.6 in 1930, 82.9 in 1940, 90.0 in 1941 and 95.7 in 1942. These calendar years approximate the years shown in Table 14, whether fiscal or calendar years.

The effect of both long- and short-term fluctuations on the trends of trade is summarized at pp. 425-426 of the 1941 Year Book and a table at pp. 426-427 of that volume gives comparative figures of imports for five decades to 1939, the latest year for which comparisons can be made upon a peace-time basis.

At pp. 463-464 of the 1942 Year Book, the impact of the War on the trade of 1940 was discussed. In that year the five leading imports were machinery, (except farm) rolling-mill products, coal, crude petroleum and automobile parts. In 1942 the five leading imports were composed of the same groups, although the order had changed, coal advancing to first place, followed by rolling-mill products, automobile parts, machinery and crude petroleum. This would indicate that Canada's requirements in the way of machine tools required for war production

had been met and that production for war purposes was in full swing in 1942, a fact further proved by the increase in value, amounting to 60.6 p.c., of automobile parts between 1940 and 1942. The increase in the second group, rolling-mill products, was less than 46 p.c., while the fourth group, machinery (except farm registered an increase of only a little over 0.1 p.c. Although normal civilian driving was severely restricted in 1942, military and commercial requirements of gasoline necessitated the importing of crude petroleum to a point 19 p.c. above the value recorded in 1940. Cotton goods and raw cotton advanced to sixth and seventh places from twelfth and tenth, respectively, in 1940, showing increases in value of 149.5 p.c. for cotton goods and 61.1 p.c. for raw cotton.

Of the remaining commodities, imports of which were valued at \$5,000,000 and over in 1942, all registered increases with the following exceptions, arranged in order of value in 1942 and showing the percentage decrease as compared with 1940 in parentheses: farm implements (22.9); rubber products (34.1); sugar and products (38.4); books and printed matter (3.7); flax, hemp and jute (12.8); noils, tops and waste wool (25.8); furs (27.5); and unmanufactured wood (22.5).

#### 14.—Leading Imports Over Four Decades, 1910-42

NOTE.—Commodities are arranged in order of importance in 1942, and include only those valued at \$5,000,000 or more.

No.	Commodity	Fiscal Years		Calendar Years

**Canada's Principal Exports.**—In the interpretation of the figures of the commodities exported, as shown in Table 15, the same qualifications apply regarding price changes and business fluctuations as in the case of imports. Furthermore, factors influencing world trade have an important bearing upon trends in Canadian exports. Since agricultural products are still an important element in Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year-to-year volume and value of exports.

At pp. 427-428 of the 1941 edition of the Year Book the effect of long-and short-term fluctuations in Canada's exports is discussed. The effect of the first year of war on Canada's exports is treated at p. 465 of the 1942 Year Book. In comparing the trade of 1942 with that of 1940, the most notable item is the advance in the export of automobiles from sixth to first place, the increase in value being no less than 257·8 p.c., an indication of the way in which Canadian-made transport is finding its way to the battlefronts of the world. Newsprint and wheat, the two leaders in 1940, were in second and third places, with a decrease of 6·8 p.c. and an increase of 1·1 p.c., respectively, in value. Meats and wood-pulp, as in 1940, occupied fourth and fifth places, the former showing an increase of 74·5 p.c. in the two years, reflecting the continued and increasing overseas demand for foodstuffs, and the latter increasing by 56·4 p.c. Planks and boards, which occupied third place in 1940, fell to sixth in 1942, but showed an increase in value of 18·3 p.c. Automobile parts, in sixteenth place in 1940, rose to seventh in 1942, showing an increase of 511·9 p.c. All other commodities in Table 15 registered increases with the exception of paper board, silver ore and bullion, unmanufactured leather and sodium compounds.

### 15.—Leading Exports (Excluding Gold) Over Four Decades, 1910-42

NOTE.—Commodities are arranged in order of importance in 1942 and include only those valued at \$5,000,000 or more. Certain items, such as strategic minerals, are omitted owing to war-time restrictions.

Commodity	Fiscal Years		Calendar Years

1 None recorded.

**Detailed Imports and Exports.**—Detailed statistics of all commodities of any importance imported into Canada from all countries, from the United Kingdom and from the United States during the calendar years 1941 and 1942 are given in Table 16, while corresponding statistics for domestic exports appear in Table 17.

War-time restrictions prohibit the publication of statistics of trade of individual items by countries and the figures of imports and exports between Canada and the United Kingdom and the United States are, therefore, confined to sub-group and group totals until such time as the restrictions in publication are removed.\* In the case of exports of non-ferrous metals, only the totals of precious metals and the group total can be given.

\* Since this chapter was prepared, the restrictions referred to have been lifted and the 1945 Year Book will give individual figures.

### 16.—Principal Imports into Canada for Consumption from All Countries, the United Kingdom and the United States, 1941 and 1942

NOTE.—Comparable totals for the year 1940 and itemized figures for the pre-war years 1937-39 will be found at pp. 482-487 of the 1942 Year Book. War-time restrictions preclude the publication of details for years since the outbreak of war but see footnote above.

**Subsection 3.—Comparison of the Volume of Imports and Exports**

The statistics of the external trade of Canada are analysed in this Subsection to reveal changes in the physical volume of external trade as well as in the dollar value of that trade. Since value figures alone may be somewhat misleading when used to show the physical growth of production and external trade it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. A description of the method used in ascertaining such fluctuations is given at p. 462 of the 1941 Year Book.

In Table 18 the imports and exports for 1940, 1941 and 1942, are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was over the average of the years 1935-39. In other words, the figures on the basis of the average values over the base period enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only, variations due to different prices having been eliminated. Index numbers of declared values, that is, the total declared values

of the imports or exports in each year expressed as percentages of 1935-39 are then given. These are followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1935-39. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1935-39.

The declared value of imports showed an increase from \$1,448,792,000 in 1941 to \$1,644,242,000 in 1942, a rise of 13.5 p.c. However, if the price level of 1935-39 had prevailed in both these years, imports would have amounted to \$1,105,221,000 in 1941 and \$1,080,245,000 in 1942. This would represent a decrease of 2.3 p.c. and indicates that the effect of rising prices was beginning to be shown in the trade returns for 1942.

Three of the main groups of imports showed decreases in declared value in 1942, viz., agricultural and vegetable products, iron and its products and non-ferrous metals; these three groups also showed decreases in volume, as did animals and animal products, wood and paper and chemicals and allied products. All groups, with the exception of iron and its products, showed advances in unit values or prices.

Exports also increased in 1942, both in value and in volume. On the basis of price levels prevailing during the period 1935-39, exports would have been valued at \$1,387,900,000 in 1941 and \$1,740,220,000 in 1942. This represents an increase of 25.4 p.c., as against the actual increase, on the basis of declared values, of 45.8 p.c., indicating not only a sizeable increase in the quantity of exports, but an appreciable increase in prices. The index of unit values of iron and its products continued its rapid rise, increasing from 151.5 in 1940 to 180.5 in 1941 and to 221.8 in 1942.

The index numbers of unit values of total imports increased from 130.8 in 1941 to 151.8 in 1942, while the index of unit values of exports showed a lesser increase from 115.5 to 134.3. This would indicate a slightly less favourable position of Canada's barter terms in 1942 than in 1941, as the prices of imported goods increased to a greater degree than did those of the exports exchanged for them.

#### 18.—Comparison of the Values and Volumes of Imports and Exports, by Main Groups, 1940-42

NOTE.—In editions of the Year Books prior to 1942, the indexes of value and volume of imports and exports were calculated on a 1936 base. These have now been re-calculated on a five-year base (1935-39=100) back to 1935, making them uniform with other indexes of the Bureau. Figures for the years 1935-39, inclusive, will be found at p. 118, Vol. I of "Trade of Canada, 1940".

<sup>1</sup> Revised since the publication of the 1942 Year Book.

**Subsection 4.—Proportions of Trade in Raw and Manufactured Products**

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development, imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the beginning of the twentieth century this position has been almost reversed; a large percentage of imports into

Canada now consists of raw material and semi-manufactured products to be used in Canadian manufacturing industries, while exports consist, to a great degree, of products that have undergone some process of manufacture. With the growth of population and the establishment of industries using mass-production methods, it has become profitable to import raw materials such as rubber, cotton and sugar for processing in Canadian factories; such industries can easily produce more finished products than the domestic market can absorb and, therefore, an export trade in these finished goods has become established.

In trade with countries possessing highly developed manufacturing industries, Canada's imports consist of manufactured products and her exports to those countries are made up largely of raw materials and semi-manufactured products. On the other hand, in trade with countries of South America and Africa, whose industrial development is not so advanced, the reverse is true, imports being predominantly raw materials, while by far the larger part of exports are fully manufactured goods.

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary, a picture with significant meaning in the complementary relationship existing in manufacturing and commerce between continents and countries.

The data of Table 19 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 20, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the dislocations in trade caused by the Axis invasions that cut off supplies of essential commodities must be borne in mind in making comparisons with the corresponding tables in earlier Year Books.

### 19.—Imports and Exports, by Continents and Leading Countries, According to Degree of Manufacture, 1941 and 1942

NOTE.—Dashes in this table indicate that the values are too small to be expressed.

Year, Continent and Country	Imports						Domestic Exports (Excluding Gold)

<sup>1</sup> Revised since the publication of the 1942 Year Book.

<sup>2</sup> Includes hair of the camel, alpaca, goat, etc.

## Subsection 5.—Origin and Purpose Groupings of Imports and Exports

In the origin classification of imports and exports appearing in Tables 21 and 21A the commodities comprising such trade are grouped according to the origin of the raw material of which the commodities are composed. A further classification according to degree of manufacture is carried out simultaneously.

The purpose classification given in Tables 22 and 22A, divides the commodities that enter into external trade according to the purpose for which the commodities are suitable. It is to be noted that this classification is for the calendar years 1941 and 1942; the only previous compilations of this nature, on a calendar-year basis, were those for 1939 and 1940 and appear at pp. 506-507 of the 1942 Year Book.

Since the Bureau of Statistics analyses manufacturing production and wholesale prices in Canada according to origin and purpose, the statistics given here for external trade provide a basis for a study of production, prices and trade according to origin or purpose.

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

## 22.—Imports and Exports (Excluding Gold), by Groups, According to Purpose, 1941

NOTE.—See headnote to Table 22, p. 470 of the 1941 Year Book for changes that have been made in the classification. In editions of the Year Book prior to 1942 this table was compiled on a fiscal-year basis; the 1942 Year Book, at pp. 508-510, gives the calendar-year figures for 1939 and 1940.

## PART III.—SUMMARY OF EXTERNAL TRANSACTIONS

### Section 1.—Canadian Balance of International Payments\*

When the statements of Canadian international balance of payments for the pre-war years are contrasted with the three war-time years, the comparison shows that the war-time developments have, in many respects, been an accentuation of a single pattern. But underlying the similarity in structure there have been outstanding differences in the mechanism of making international settlements which have been at the core of the financial problems arising out of developments in international payments during the War.

Before the War, particularly in the trade between the British Commonwealth of Nations and the United States, free exchange markets were the characteristic channel of international settlements between the principal trading nations of the world. Canada's international accounts provide an excellent example of how the system of multilateral settlements operated. In the years before the War Canada's balance of sterling income, which mainly originated from Canadian exports to the United Kingdom, was freely convertible into United States dollars, so that the Dominion was able to settle the deficit arising out of commercial and financial relations with the United States. Triangular settlements such as those arising from Canada's trade with the United Kingdom and the United States were a basic part of the framework of world trade and had the effect of broadening the sphere of trading between nations by going far beyond the limited scope of bilateral trade.

The War, however, has interrupted the operation of the system of multilateral settlements by creating conditions under which sterling is no longer freely convertible into United States dollars. In addition, the current accounts of the belligerent nations have become distorted by war-time demands which have produced greatly augmented current balances for which new methods of settlement have had to be devised. In the case of Canada the new conditions have produced problems with respect to the balances of payments with both the Sterling Area and the Non-sterling Area.

With the Sterling Area, the problem has been one of finding means of financing the growing British shortage of Canadian dollars as the needs of the United Kingdom for Canadian munitions, food and raw materials increased to unprecedented proportions. (See Finance Chapter.)

In the case of the balance of payments with Non-sterling Area, the central problem has also been one of scarcity—in this case a Canadian shortage of United States dollars. The customary deficits in Canada's current account with the United States has been greatly augmented by the War, principally because of the rapid rise in Canadian imports from the United States. At the same time, net credits from other foreign countries whose currencies are convertible into United States dollars have sharply contracted with the decline in exports to Continental Europe and Asia. It has therefore been necessary to conserve United States dollars for the more essential purposes of the War, and to develop new sources of United States dollars. Exchange control (with the control of capital movements) has provided the principal means of conserving United States dollars. Government measures have also limited expenditures on Canadian pleasure travel and non-essential commodities in non-Empire countries. As a result of the Agreements entered into at Hyde Park in April, 1941, new sources of United States dollars

\* Summarized from the Report "Canadian Balance of International Payments, 1937-42" prepared by C. D. Blyth, B.A., Chief, International Payments Branch, Dominion Bureau of Statistics.

were produced with the sale of munitions on a large scale to the United States Government and further development of the production of raw materials in Canada. The sale in the United States of gold and United States dollars purchased from the United Kingdom has also been a factor in meeting deficits in the United States. Another factor of increasing importance in alleviating Canada's shortage of United States dollars has been the growing volume of imports of capital arising, mainly, from the purchase of outstanding Canadian bonds by United States investors.

**Current Account Transactions.**—Current account transactions between Canada and all countries are given in Table 1. In order to reveal the financial and foreign exchange aspects of the international accounts produced by war-time changes, it is necessary to divide the balance of payments statements into two clearly defined divisions; the balance of payments between Canada and Empire countries, and the balance of payments between Canada and the rest of the world, with which Canada's dealings are on a United States dollar basis. In the period before the introduction of exchange control by the nations of the British Commonwealth in September, 1939, the division into the two areas had less significance from a currency point of view, being only a division between Empire and non-Empire countries.

*Empire Countries.*—The dominant characteristic of the balance of payments between Canada and the Sterling Area—a large excess of Canadian exports and other sources of balance of payments credits over imports and other debits—was even more pronounced in 1942 than in the earlier years of the War (see Table 2). The expansion in British expenditures was mainly due to much heavier payments for munitions. Payments for raw materials and food continued at very high levels also, while expenditures on various war activities, including air training in Canada, increased substantially. Expenditures in Canadian ports in connection with shipping and payments for inland freight on exports were also higher.

The moderate gain in British receipts was due almost entirely to the higher level of Canadian expenditures abroad in connection with the Canadian Armed Forces overseas. Total overseas expenditures of the Canadian Government were \$191 million in 1942 compared with \$97 million in 1941. Imports from both the United Kingdom and the rest of the Sterling Area, amounting to \$116 million and \$110 million, respectively, in 1942, were lower than in 1941 but still higher than in 1939. Net payments of interest and dividends by Canada to the Sterling Area declined from \$75 million in 1939 to \$63 million in 1941 and \$44 million in 1942. This decline was mainly a reflection of the elimination of interest payments on Canadian bonds which have been repatriated since the start of the War.

*Non-Empire Countries.*—Net debits from current account transactions between Canada and non-Empire countries in 1942 amounted to \$168 million, compared with \$314 million in 1941 and \$270 million in 1940. In each year from 1937 to 1942 there have been large deficits with the United States which have been partly offset by credit balances from transactions with other foreign countries. These credit balances, arising from trade with other foreign countries, have been greatly reduced, however, by the elimination of exports to most areas of Continental Europe and Asia.

The rapid and continued rise in the value of imports from the United States during the War has been a primary factor in the growth of the debit balance with the United States dollar area. The demand for imports, is, of course, closely related to the war-production program. Imports of capital equipment have been an important element, especially in the earlier years of the War. As munitions pro-

duction has expanded imports of materials, fuel, and components have also grown and represent a major part of the increases. An important part of these United States dollar requirements arises from the United States dollar content of production in Canada for the United Kingdom.

While exports to the United States dollar area have increased each year during the War, there has been less regularity in the increases than in the rise in imports; the greatest expansion occurred in 1942, principally as a result of transactions under the Agreements entered into between the Canadian Prime Minister and the President of the United States at Hyde Park in April, 1941 (see p. 494), although a considerable part of the increase occurred in normal exports other than "Hyde Park items" so that the value of raw materials and other civilian commodities exported to the United States in 1942 was at a record level.

Net exports of non-monetary gold produced \$184 million in 1942 compared with \$204 million in 1941. Gold production in 1942 declined as a result of manpower transfers and higher costs.

Tourist and travel expenditures produced net credits of \$55 million in 1942 compared with \$90 million in 1941 (see Table 4) p. 500.

The reduction in net payments to the United States dollar area on account of interest and dividends was the result of increased income from Canadian-owned investments in non-Empire countries, particularly from direct investments in the United States.

Net debits on account of freight and shipping with the United States dollar area continued to grow rapidly in 1942, principally because of the large increase in ocean shipping costs brought about by the sharp rises in shipping and war risks insurance rates. Although payments for inland freight on coal and other commodities imported from the United States continued to mount, these increases were more than offset by increased receipts by Canadian railways carrying exports to the United States border.

All other current transactions resulted in a credit balance of \$43 million compared with substantial debit balances in preceding years. As it includes unusual transactions, the composition of this item varies in the different years. War-time factors were particularly significant in producing the credit balance in 1942. Expenditures by the United States Government on the construction of the Alaska Highway and other developments in Canada were substantial. Newfoundland's balance of United States dollar receipts, which were also included, were particularly heavy in 1942 because of expenditures by the United States Government on defence bases there.

**Capital Account Transactions.**—*Empire Countries.*—Gross capital receipts by Canada from Empire countries in 1942 were \$884 million. The largest element in this figure, however, is \$818 million representing the net decline in 1942 in the sterling balances which had been accumulated by Canada in the earlier years of the War. The principal part of the decline, \$700 million, resulted from the conversion of an equivalent amount of sterling into a special loan to the Government of the United Kingdom. Most of the remaining \$66 million of capital credits is made up of \$58 million expenditures by the United Kingdom on fixed capital invested in Canada for the production of munitions and for air training.

Gross capital debits, exclusive of the \$1,000 million gift and the special purchase of gold, amounted to \$1,129 million in 1942. Private retirements of securities, purchases of securities, repayments of mortgages and loans, settlements of estates

and trusts and insurance company transactions make up about \$59 million, and the remaining amount of \$1,070 million is made up of debits connected with official transactions as follows: repatriations \$296 million; special loan to the United Kingdom \$700 million; and miscellaneous payments to adjust previous transactions \$74 million.

The principal means adopted by the Canadian Government of financing the residual needs of the United Kingdom on current and capital accounts was the \$1,000 million gift to the Government of the United Kingdom. Consequently, the British Government was enabled to purchase munitions, raw materials and food, and to make other expenditures necessary for the prosecution of the War.

*Non-Empire Countries.*—Capital payments by Canada to non-Empire countries are, of course, subject to restrictions imposed by foreign exchange control. In general, payments were allowed only in the case of maturing contractual commitments, although certain other types of capital transfers were permitted in minor amounts.

Gross capital debits in the account with non-Empire countries in 1942 amounted to \$212 million. Retirements of Canadian bonds and debentures held in the United States and repayments of mortgages, loans and advances and other contractual obligations made up most of the cash payments as in former years. In 1942, however, there were also debits in connection with changes in private balances and other short-term assets as well as debit entries reflecting an increase in Canada's official reserves of gold and United States dollars. An important factor contributing to this increase in reserves was the unusually high level of purchases of Canadian securities by United States investors.

Capital credits with non-Empire countries totalled \$351 million in 1942. The proceeds from the purchase of securities by investors in the United States was the largest single source of capital credits. Transactions in outstanding Canadian bonds represented the largest part of this import of capital. These were heavier than in any previous year for which records are available and were concentrated in Dominion, Dominion guarantees and provincials.

The other prominent source of capital credits in 1942 was the receipt of certain prepayments and capital advances arising out of the Hyde Park Agreements. These advances in connection with the production of munitions and raw materials in Canada, of course, give rise to subsequent deliveries of exports for which no payments will be received.

Capital credits also originated in various increases in other forms of United States investments in Canada, and decreases in other forms of Canadian-owned assets in the United States and elsewhere. These credits were in connection with direct investments, insurance transactions, estates and trusts, real estate, short-term financing, repayments, etc. Expenditures by the United States Government on the Alaska Highway and other developments in Canada are covered in the current account rather than the capital account.

Credits of \$23 million were also received from the sale in the United States of the gold purchased from the United Kingdom.

Statistics of the balance of international payments have been revised back to 1937 and the revisions are shown in the following tables. These replace statistics for 1937-40 appearing in earlier editions of the Year Book. A subdivision of tourist expenditures is shown in Table 5 at the end of the series.

## Section 2.—The Tourist Trade of Canada\*

The growth of tourist travel in Canada, to the point where it has become one of the nation's great 'service' industries, was a remarkable development in pre-war years. It represents in economic terms the disposition of national assets in which Canada is particularly rich—scenic beauty, invigorating climate, opportunities for summer and winter sports of all kinds, religious shrines and places of historical interest—for the exploitation of which large capital expenditures have been made on hotel accommodation, improved highways, national parks and other attractions.

The place of the tourist trade as one of the 'invisible' items in Canada's balance of international payments is seen from the tables at pp. 498-500. The expenditures in Canada of travellers from other countries have the same effect, in so far as they influence the balance of payments, as the export of additional commodities and, similarly, the expenditures of Canadian travellers in other countries are comparable to the import of goods from abroad.

During the past four years, it has been possible to introduce wide-spread improvements in estimating tourist expenditures. An extensive reorganization of tourist statistics procedure was undertaken jointly during 1941 by the Dominion Bureau of Statistics and the Customs Division of the Department of National Revenue, with a view to improving estimates of the expenditures of United States tourists entering Canada by automobile. As with changes already introduced in 1940, these improvements were directed towards two main objectives: a more accurate and uniformly-classified *count* of cars and persons involved in the movement, and a larger and more representative *sample* of the tourists' expenditures.

\* Abridged from "Canada's Tourist Trade, 1942" and other reports published by the Dominion Bureau of Statistics.

Since Apr. 1, 1941, all customs permits and entry records have been sent for compilation to the Dominion Bureau of Statistics, where the traffic is counted and classified on a uniform basis. This new procedure with regard to motor travel has proved most successful and very much larger and better expenditure samples have been received. At the same time similar but less extensive improvements have been achieved through co-operation of the Immigration Branch of the Department of Mines and Resources in the field of non-motor travel—persons entering Canada by rail, bus, aeroplane and boat.

**United States Travel Expenditures in Canada.**—The important place which United States travel expenditures occupy in the Canadian economy in normal times has been more fully recognized since the outbreak of war, as a result of unprecedented demands for U.S. dollars to pay for much-needed war materials. Sterling balances built up through exports to the Sterling Area can no longer be converted into U.S. dollars to pay for purchases in the United States, and thus direct sources of United States exchange, such as the tourist trade, have been of importance in the furtherance of Canada's war effort.

As a large part of the traffic from the United States customarily travels to Canada by motor-car, the curtailment in the use of automobiles in recent years has had the effect of reducing the volume of international expenditures. The effects of the decline in motor traffic first became pronounced in 1942 when the expenditures of United States motorists in Canada were \$26,000,000 compared with \$54,000,000 in 1941. Total United States expenditures in Canada in 1942 are estimated at \$79,000,000 compared with \$107,000,000 in 1941. In 1943 there were further contractions in the expenditures of motorists but these were more than offset by much heavier expenditures by persons travelling by rail than in former years. United States expenditures in Canada in 1943 totalled \$87,100,000. These expenditures in the United States during the War compare with pre-war levels indicated by revised estimates of \$149,000,000 in 1937, \$134,000,000 in 1938 and \$137,000,000 in 1939.

It should be noted that the new estimates for the pre-war years point to much lower levels of expenditures than the estimates originally published. The revisions have been made by relating the increased information on expenditures obtained during the war years to the volume of traffic in the pre-war years. Although the estimates for the pre-war years have therefore a less substantial basis than the data for the more recent years, it is believed that they are fairly representative of expenditures before the War.

**Canadian Travel Expenditures in the United States.**—The most significant factors influencing Canadian travel in the United States since the outbreak of war have been the restrictive measures introduced by the Dominion Government in order to conserve U.S. dollar exchange. Together with the efforts to increase the number of United States visitors to Canada, these measures have been designed to increase the net favourable balance accruing to Canada as a result of the tourist trade and thus to release U.S. dollars for vital war needs.

In July, 1940, by action of the Government under the Foreign Exchange Control order, virtually all Canadian pleasure travel involving the expenditure of U.S. dollars was eliminated, and total travel has been at a low level since that time. The Government was faced with the problem of deciding on the relative importance of the uses to which Canada's limited supply of U.S. dollars might be put, and it was considered essential that the purchase of war material, the servicing

of the national debt and the meeting of contractual obligations in the currency of the contract should have first call on such U.S.-dollar resources. In 1941, the first full year in which the travel restrictions were in force, total expenditures of Canadian travellers in the United States are estimated to have been \$18,250,000 as compared with nearly \$40,000,000 in 1940. Canadian expenditures in the United States in 1942 are estimated at \$24,000,000 and at \$33,700,000 in 1943. These expenditures compare with the pre-war level of Canadian expenditures in the United States indicated by the revised estimates of \$65,000,000 in 1937, \$66,000,000 in 1938 and \$67,000,000 in 1939.

**Travel between Canada and Overseas Countries.**—It is estimated that travellers from overseas countries spent approximately \$2,900,000 in Canada in 1942, while Canadian expenditures overseas were \$3,300,000 in the same year. As pleasure travel between Canada and overseas countries has been largely eliminated by war-time conditions, it may be presumed that the great bulk of these amounts represented expenditures by persons travelling on Government or other business.

**6.—Expenditures of Foreign Travellers in Canada and Canadian Travellers Abroad, 1942 and 1943**

Class of Traveller	1942			1943 <sup>2</sup>

		<b>SECTION 3. ADMINISTRATION OF BANKRUPT ESTATES.....</b>	559

The diverse resources of the various parts of the country have led to a vast exchange of products and the task of providing goods and services where they are required for consumption or use by a population of 11,507,000 accounts for a greater expenditure of economic effort than that required for the prosecution of Canada's great volume of external trade, high though the Dominion ranks among the countries of the world in this field.

Internal trade is broad and complicated: it encompasses all value added to commodities traded in provincially and interprovincially by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. In fact, in a broad interpretation, internal trade covers a large part of those activities of the people that add to the 'form' utilities, dealt with in the various preceding chapters, the utilities of 'place', 'time' and 'possession', and the personal and professional services referred to in the Survey of Production and other chapters. However, the arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles and cross reference to other chapters is essential. The Index will be found useful in this respect.

## PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

### Section 1.—Interprovincial Trade\*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. The railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports by rail for the respective provinces. Freight might be imported by rail and exported by water, such as western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, these statistics should be used with discretion when measuring interprovincial trade.

<sup>1</sup> The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1941, for instance, originated within the previous year.

### Section 2.—Food Consumption of the Civilian Population, 1935-43

The importance of food consumption in the war years compared with the immediately preceding five-year period has been the subject of special study in the Agricultural Branch of the Dominion Bureau of Statistics due to its significance on so many aspects of internal economy and due to the fundamental value of these statistics. Such consumption figures have been desirable and for commodities such

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

as wheat, alcoholic beverages, meats, etc., have been compiled for a considerable period on a total basis. The War, however, has made it more necessary than ever to establish consumption data on a comparable basis and the foundation has now been laid to build them up on a sound foundation which can be carried into the post-war period.

The series given in Table 2 presents official estimates of supplies of food moving into civilian consumption in pounds per head per annum for the five pre-war years, 1935-39, as an average for comparison with the individual years, 1940, 1941, 1942 and 1943 (the estimates for 1943 are preliminary and subject to later revision). For those foods rationed under Government control, the data have been checked by officials of the Wartime Prices and Trade Board. As pointed out, the figures include supplies moving into civilian consumption only after adjusting total production for imports, exports, changes in stocks, marketing losses, industrial uses and supplies going to the Armed Forces. The per capita figures are then derived by dividing by the total civilian population. All calculations are made at the retail stage of distribution except for meats where figures are worked out at the wholesale stage. The amounts of foods actually eaten would be somewhat lower than the figures cited because of losses and wastes occurring after the products reached the hands of consumers. It should also be pointed out that there are minor discrepancies in certain of the figures since storage stocks in the hands of retailers and consumers were not available for certain commodities. In the main, however, the figures represent the best picture of food consumption data that has been compiled for Canada.

All basic foods have been classified into fourteen main commodity groups. Totals for each group have been computed by using a common denominator for that group (such as milk solids—dry weight—in the case of the milk and milk products group; fat content in the case of oils and fats; and fresh equivalent in the case of fruits). All foods have been included in their basic form, that is, as flour, fat or sugar, rather than in more highly manufactured forms.

The outstanding deduction from the statistics is that supplies of foods moving into civilian consumption throughout the war period have, with relatively few exceptions, increased over the pre-war five-year term in spite of increased exports of a number of important agricultural commodities and the huge demands for foods of all kinds by the Armed Forces stationed in Canada. It is noteworthy that the production of most foodstuffs has been adequate to meet these demands and to leave increased quantities available for the civilian population.

Thus the consumption of milk and milk products has increased substantially during the war period, particularly fluid milk. Cheese consumption has remained constant despite a sharp increase in production. All of the additional supplies have been shipped to the United Kingdom. The increase indicated for milk in ice cream overstates the true civilian consumption as it is impossible to determine the portion of ice-cream production that has been sold through military canteens. Total supplies of meats have also risen materially with the main increase occurring in beef. As meat rationing did not come into effect until May, 1943, and as consumption was heavy during the early months of the year, the effects of rationing are not reflected in the 1943 annual average figures. It will be noted that the consumption of pork was approximately the same in 1943 as during the pre-war period. The spectacular increase that has taken place in hog production has all been made available to the United Kingdom. There has been a gradual rise in the consumption of poultry meat over the war period but supplies of fish have declined

as a result of reduced landings. The civilian consumption of eggs was maintained at about the pre-war level until 1942. In 1943, however, a rather sharp rise in consumption is indicated from the preliminary figures.

In the oils and fats group, butter consumption remained relatively constant until 1942 when a marked rise occurred. Rationing came into effect in December, 1942, and the consumption in 1943 was reduced. The use of butter in hotels, restaurants and by food manufacturers accounts for the per capita consumption being greater than the ration allowance to individuals. Increased slaughtering of hogs has resulted in a substantial increase in available supplies of lard throughout the war period. After substantial increases in 1940 and 1941, the figures for sugar show the effect of rationing in 1942 and consumption has been further reduced in 1943. Again allocations to caterers and manufacturers and special allowances for home canning brought the per capita figures substantially above the ration allowance.
